Lenore platform

Page guide: every screen and what it is for

Lenore Trading LLP · Vatayam, Kuttiady · GSTIN 32AANFL0054E1ZR

One Cloudflare platform with five surfaces: the public **website** (www.lenoretrading.com), the **sales catalogue** app for salespeople (/catalogue), the **customer quotation** page (/q/…), the **billing counter** (/pos) and the **staff workspace** (/manage). The catalogue, counter and workspace install as phone/desktop apps.

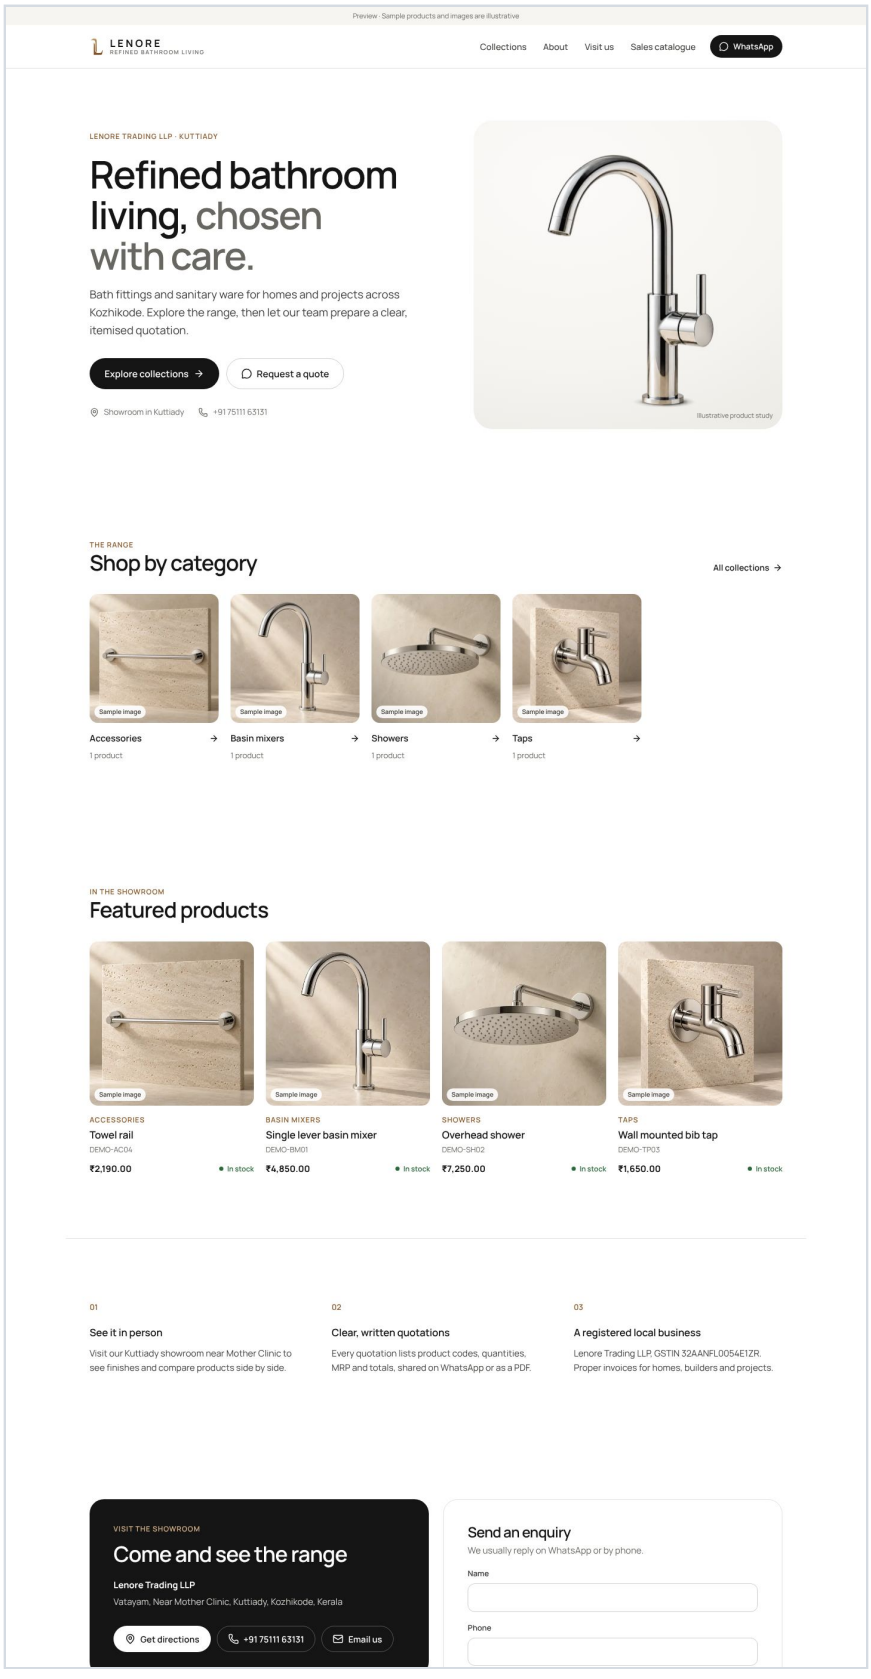

Screenshots were taken on the local development build (19 Oct 2026) with illustrative sample products, customers, suppliers and bills. None of it is live business data. Desktop shots use a 1440 px window; phone shots use an iPhone 13 size screen.

Sections

1. Website (8 screens)
2. Sales catalogue (8 screens)
3. Customer (1 screens)
4. Billing counter (9 screens)
5. Staff workspace (25 screens)

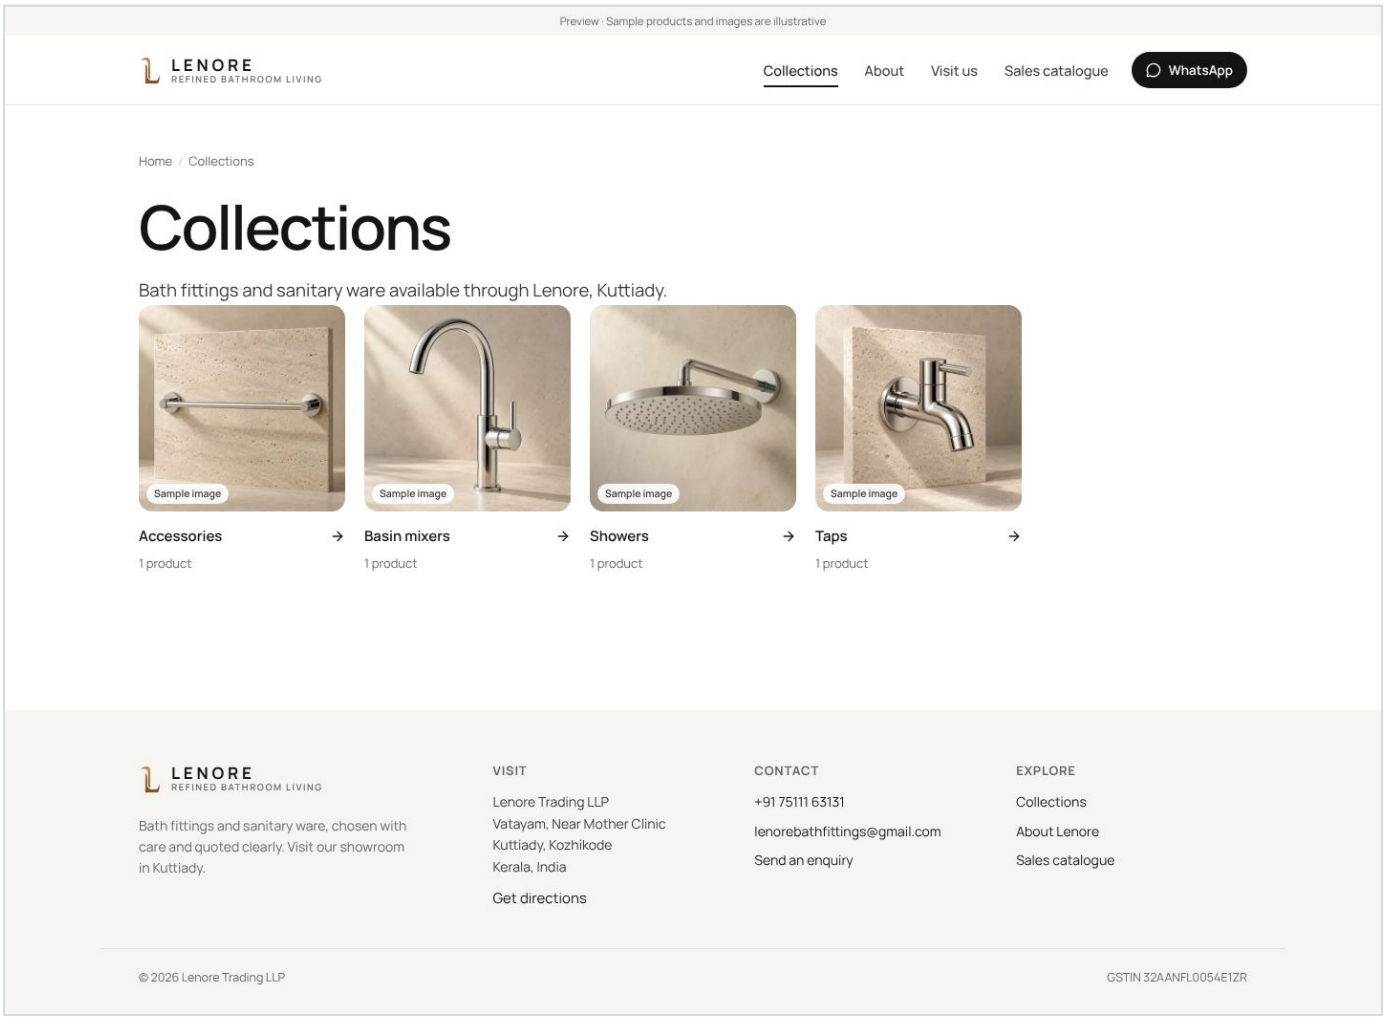

Home

The public landing page at www.lenoretrading.com. It introduces Lenore Trading LLP, links to collections, and offers WhatsApp, call and directions. It is rendered on the server with full search metadata, business structured data (address, phone, GSTIN) and a sitemap, so Google can index it. On phones a bottom bar keeps Call, WhatsApp and Directions within thumb reach.

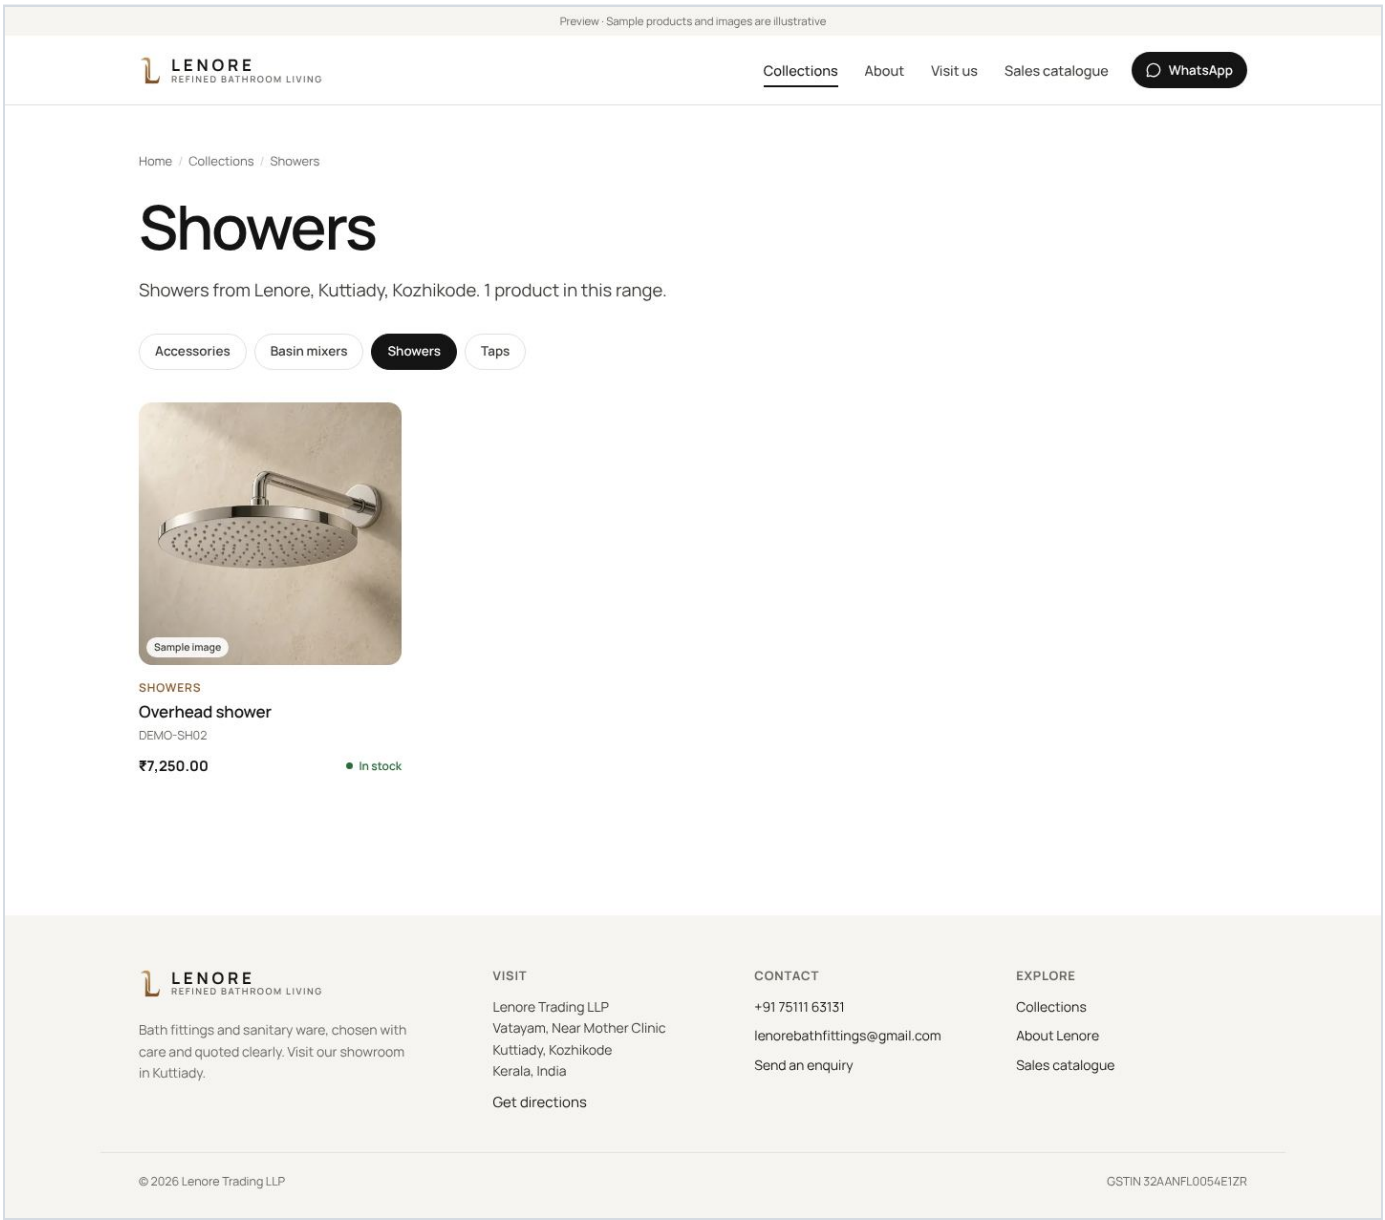

Collections

Every product category with a count and image. Each category has its own search-friendly page.

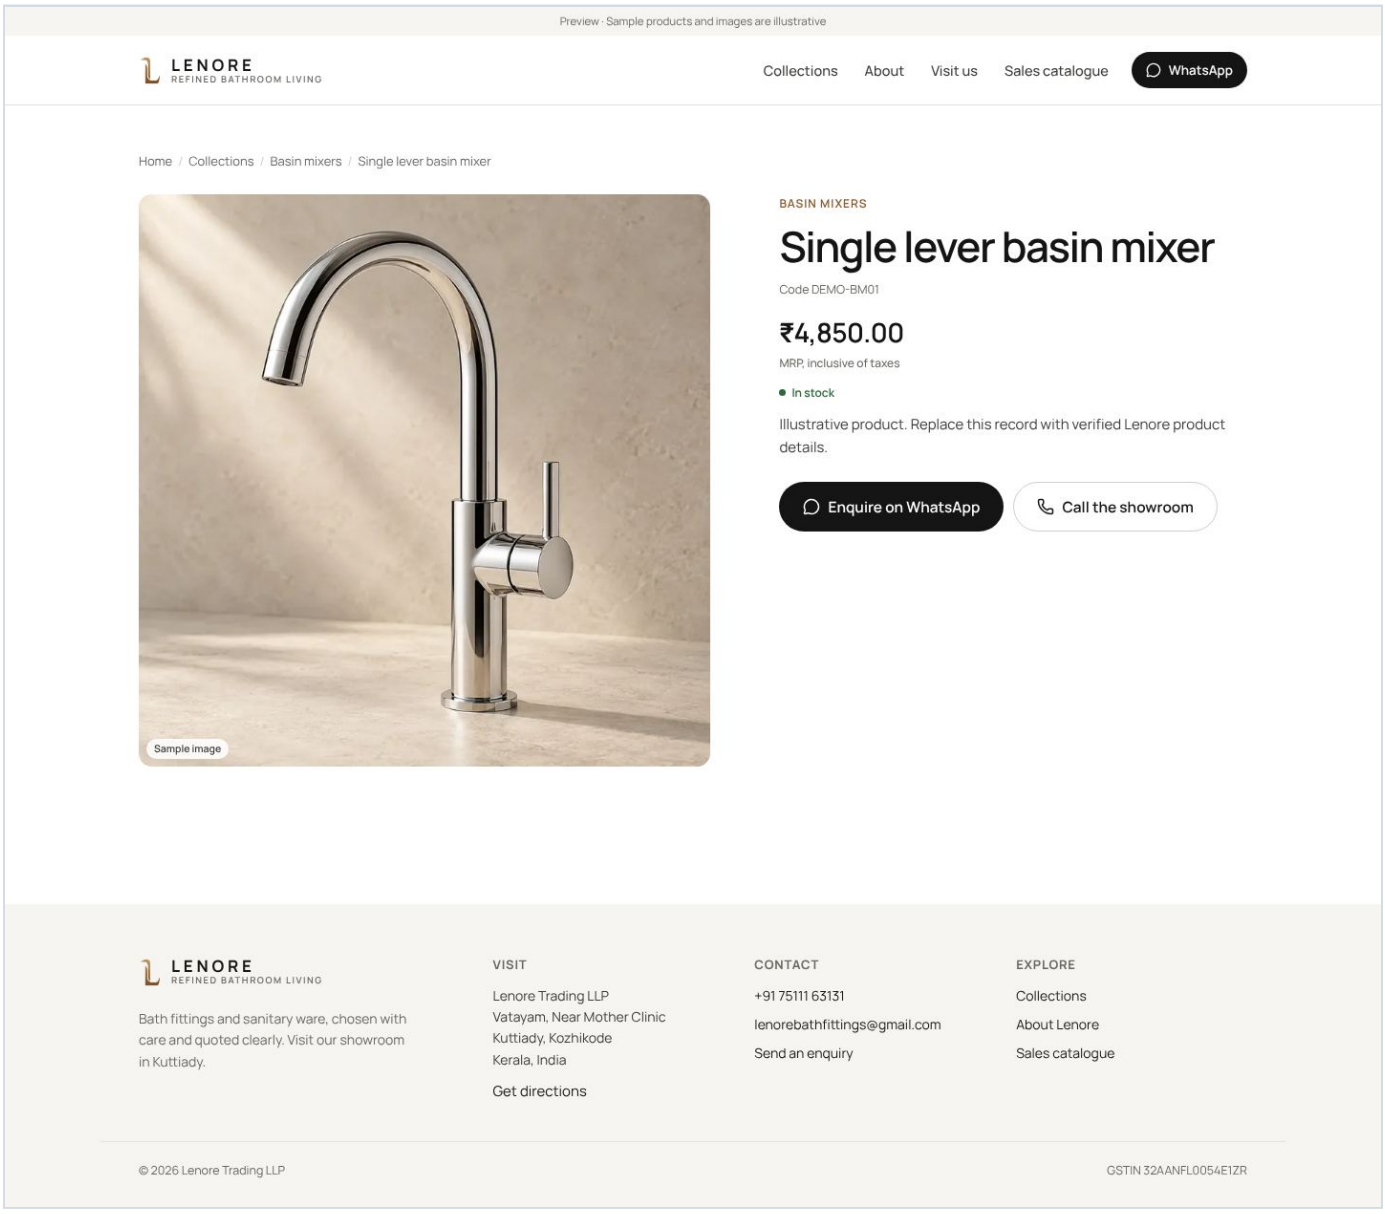

Collection page

Products in one category. When the catalogue is public, visitors see suggested MRP and stock status (never exact quantities). When the catalogue is private, this page invites visitors to ask for prices on WhatsApp instead.

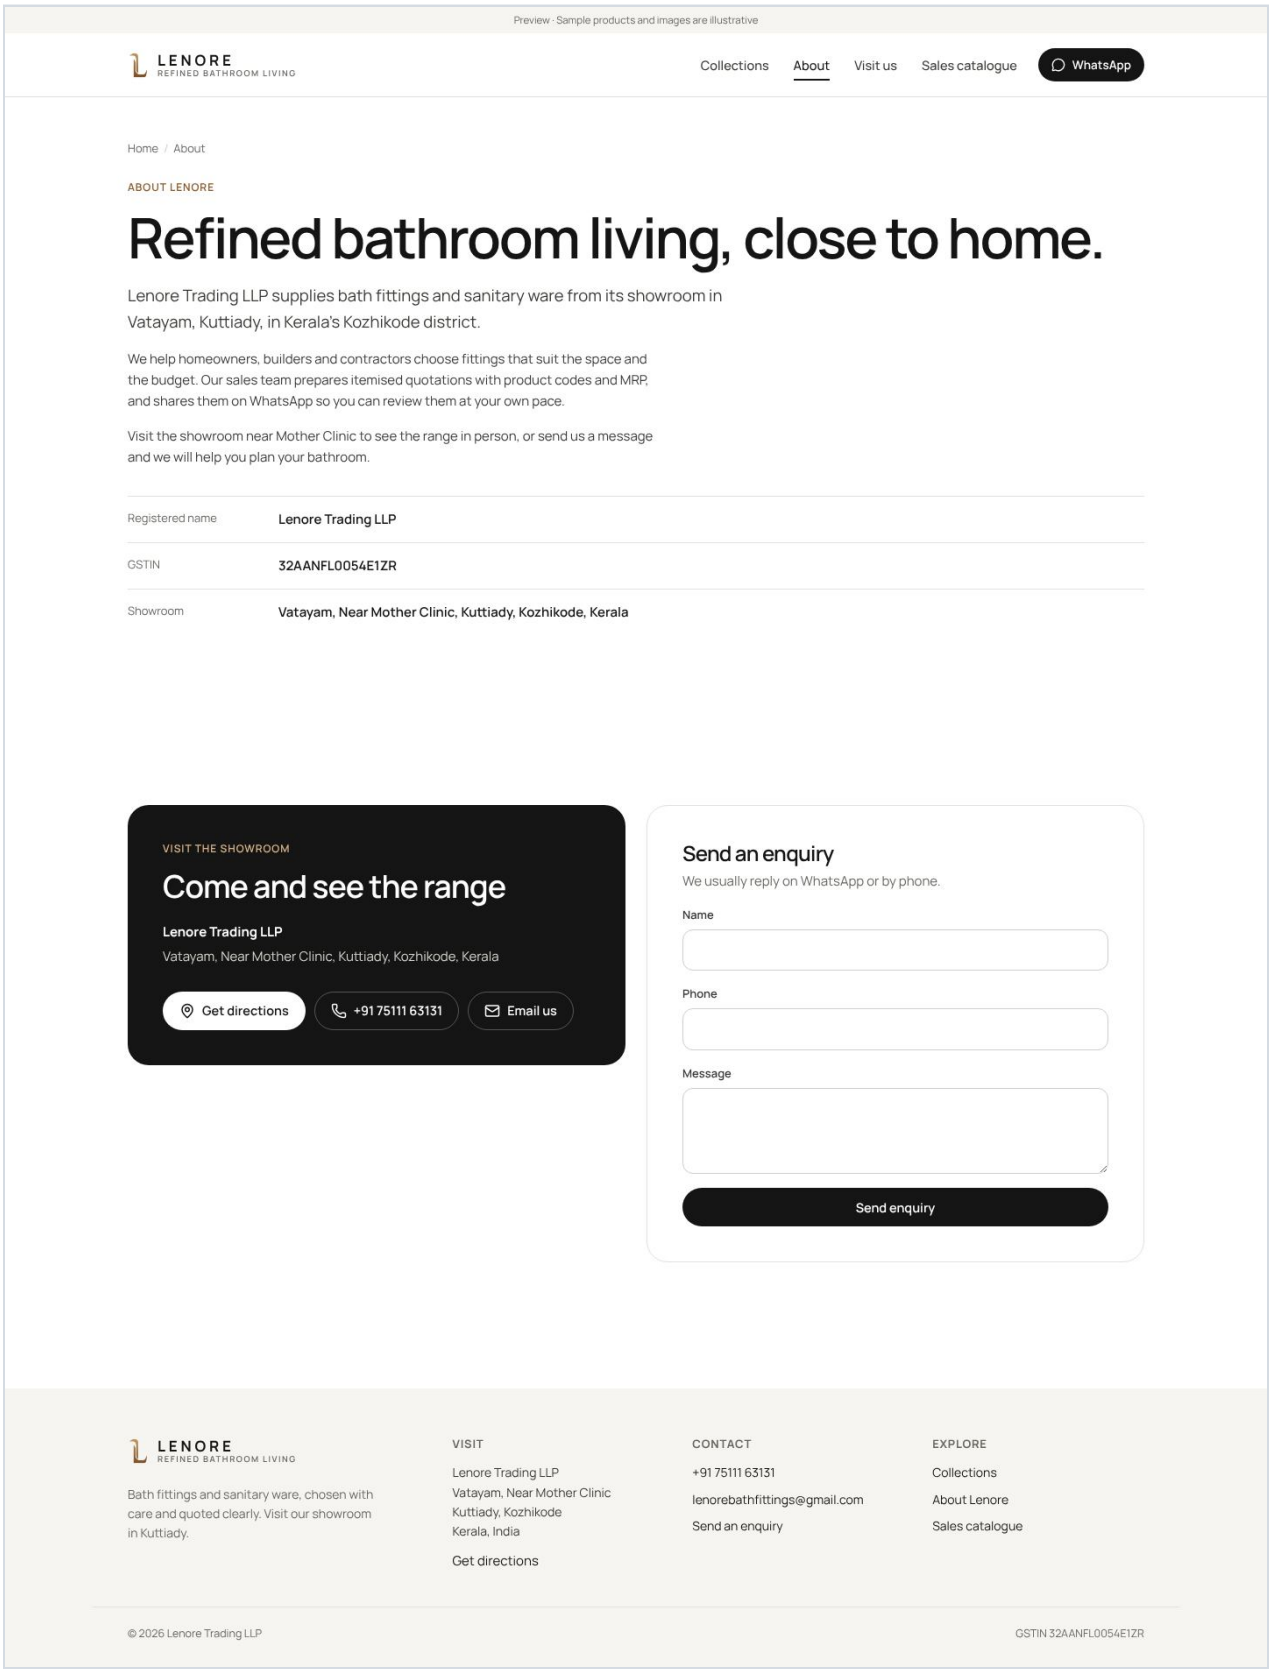

Product page

A single product with photo, code, MRP, stock status and description, plus WhatsApp and call buttons that mention the product. It includes Product structured data for search results. Sample images are labelled as illustrative.

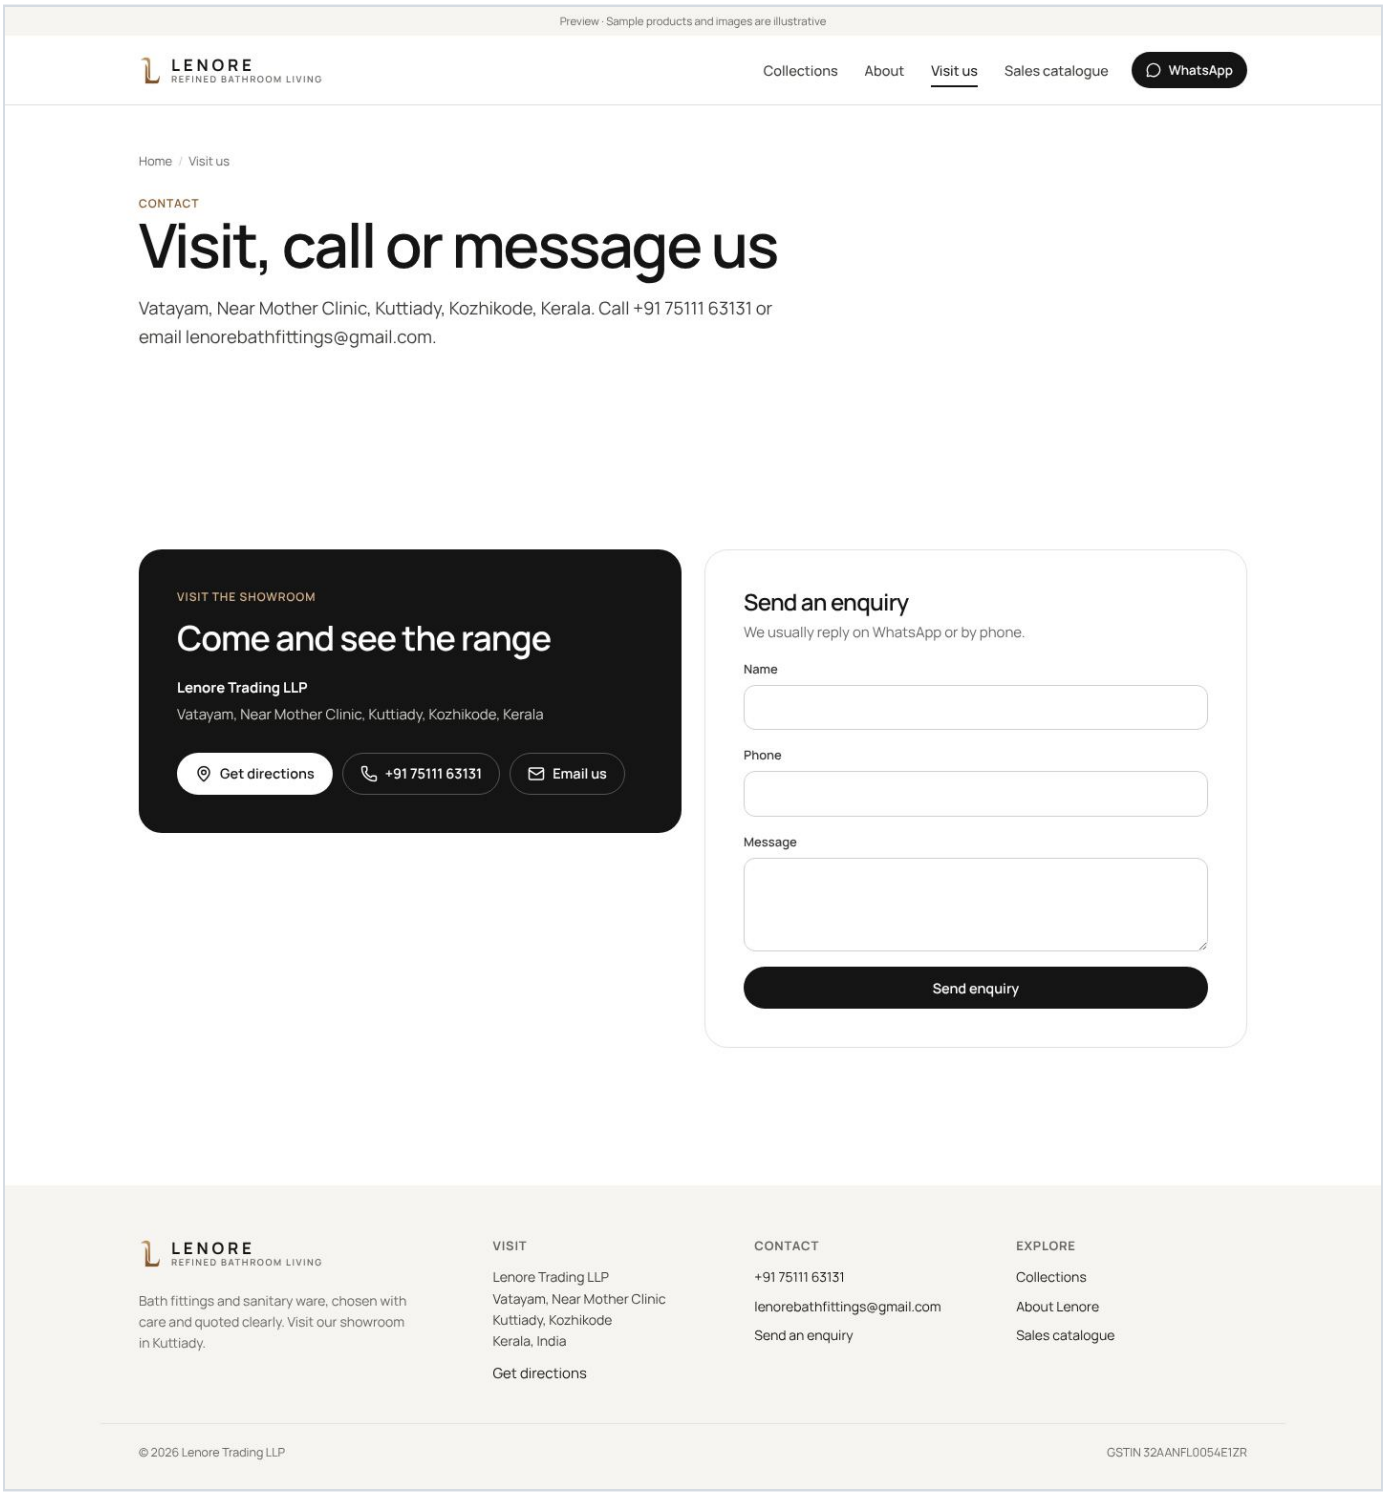

About

Factual information about Lenore Trading LLP: what the business does, the showroom location and its GSTIN.

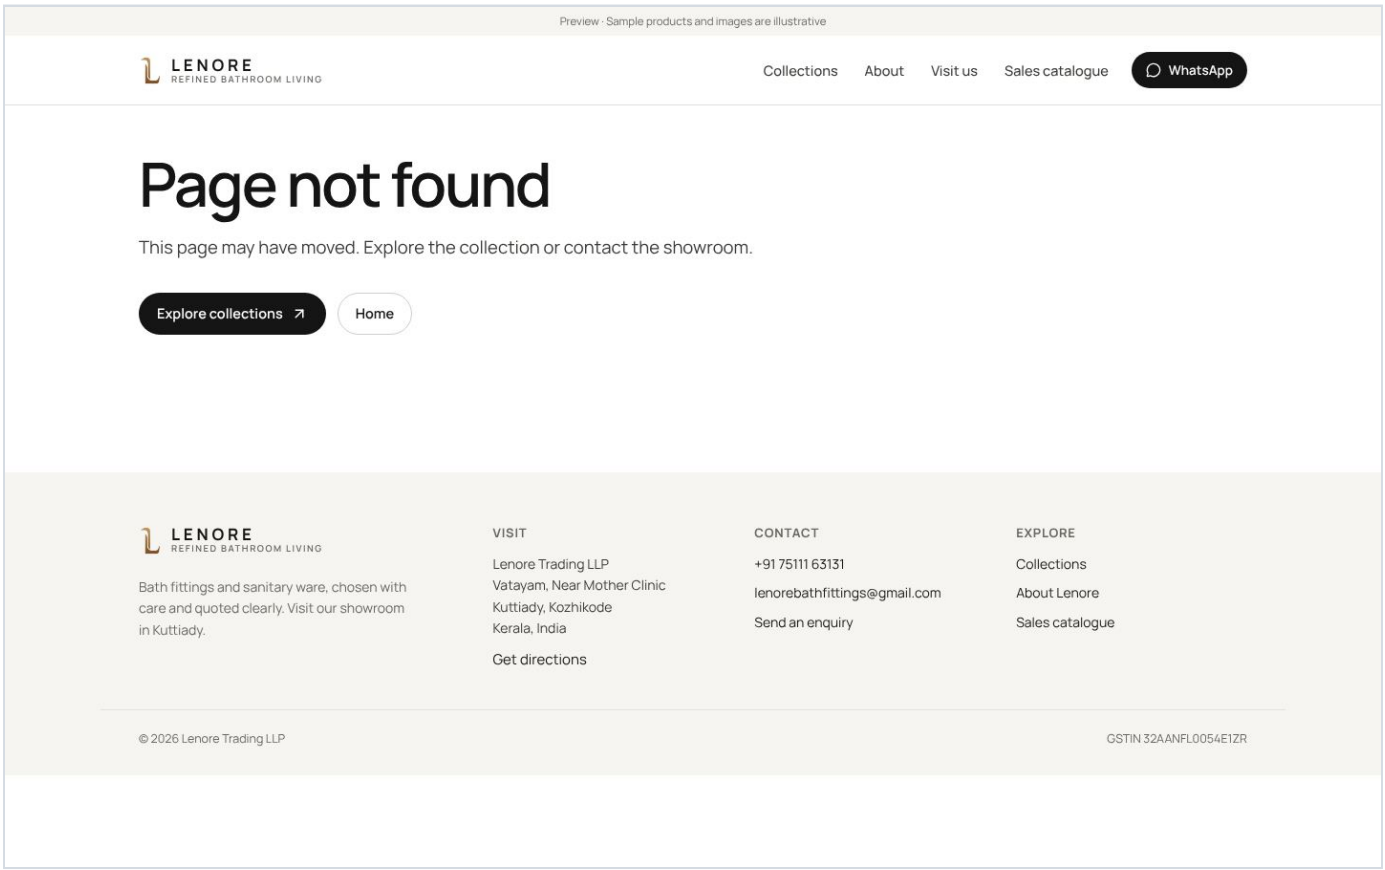

Visit and enquire

Address, directions, phone and email, with an enquiry form. Submitted enquiries appear in the workspace under Enquiries.

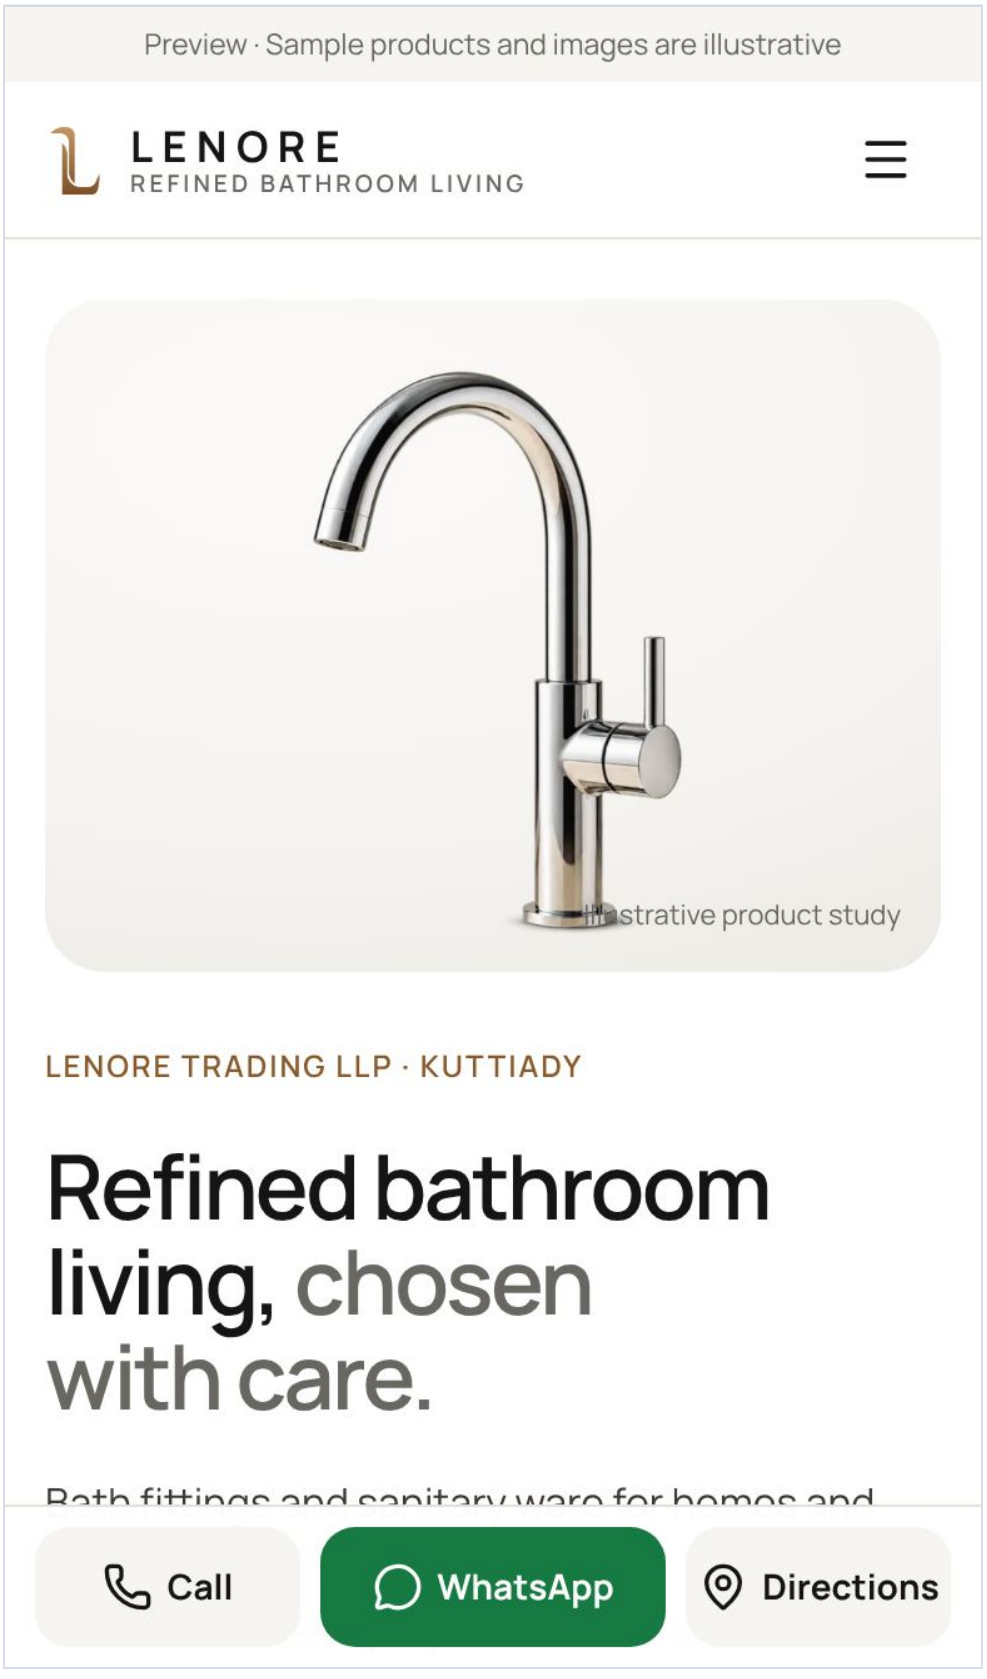

Not found

A real 404 page (correct status code for search engines) that points visitors back to the collections.

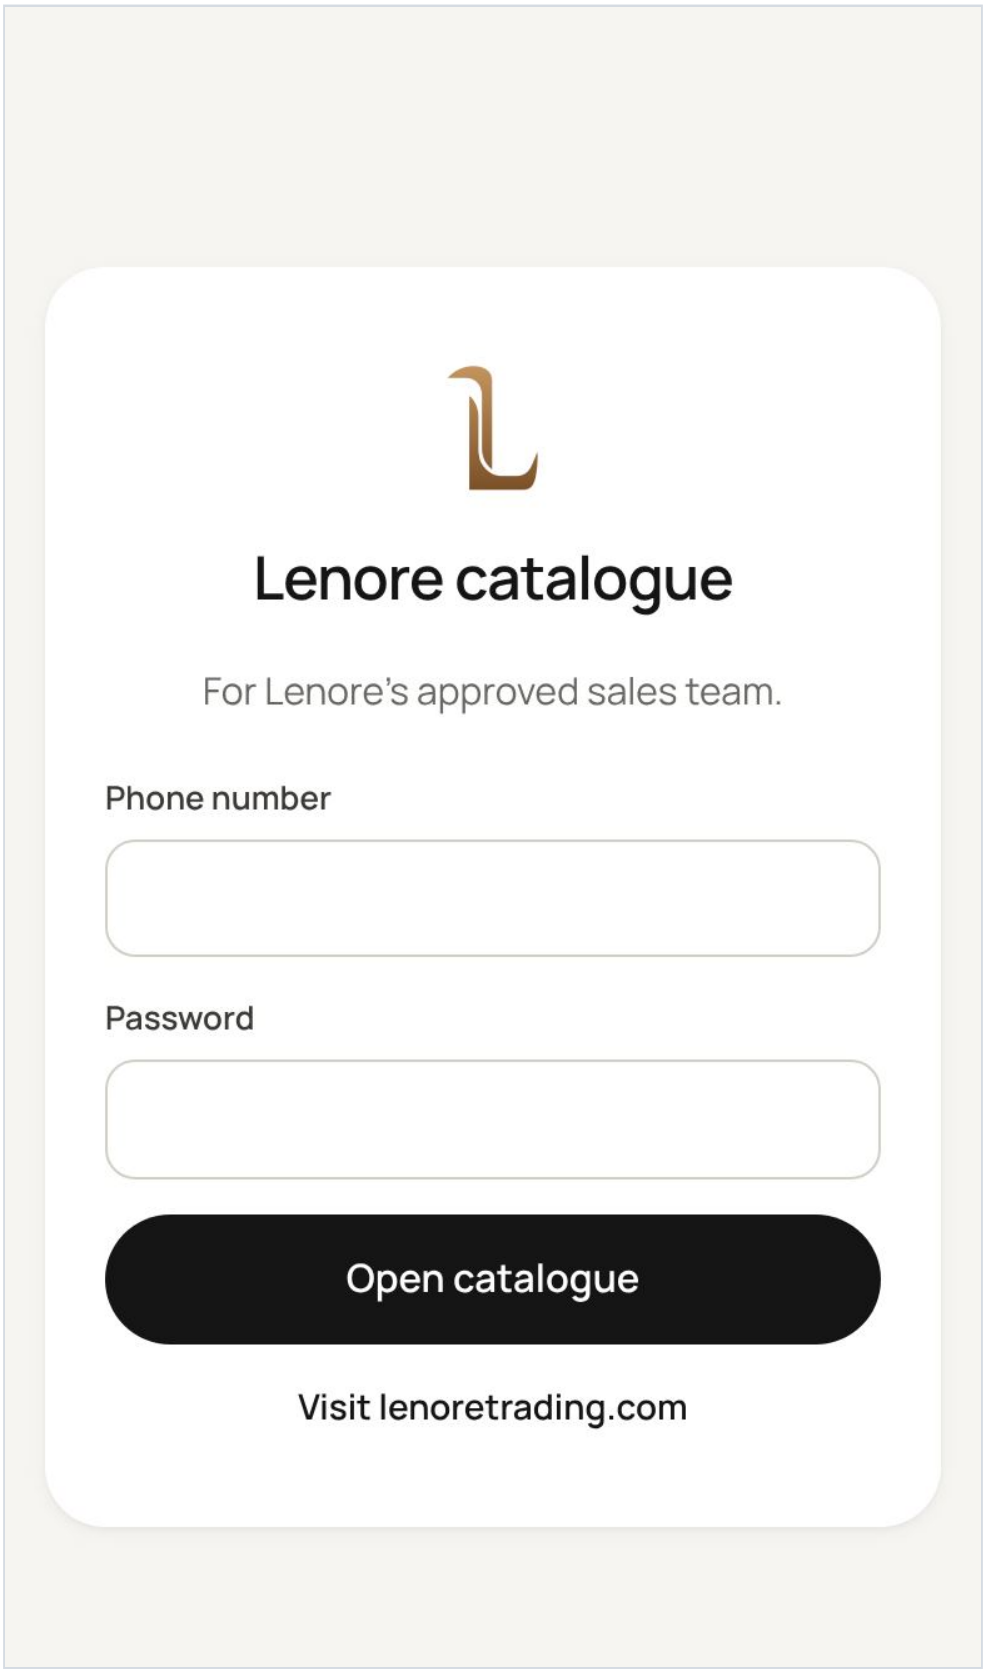

Home (phone)

The public landing page at www.lenoretrading.com. It introduces Lenore Trading LLP, links to collections, and offers WhatsApp, call and directions. It is rendered on the server with full search metadata, business structured data (address, phone, GSTIN) and a sitemap, so Google can index it. On phones a bottom bar keeps Call, WhatsApp and Directions within thumb reach.

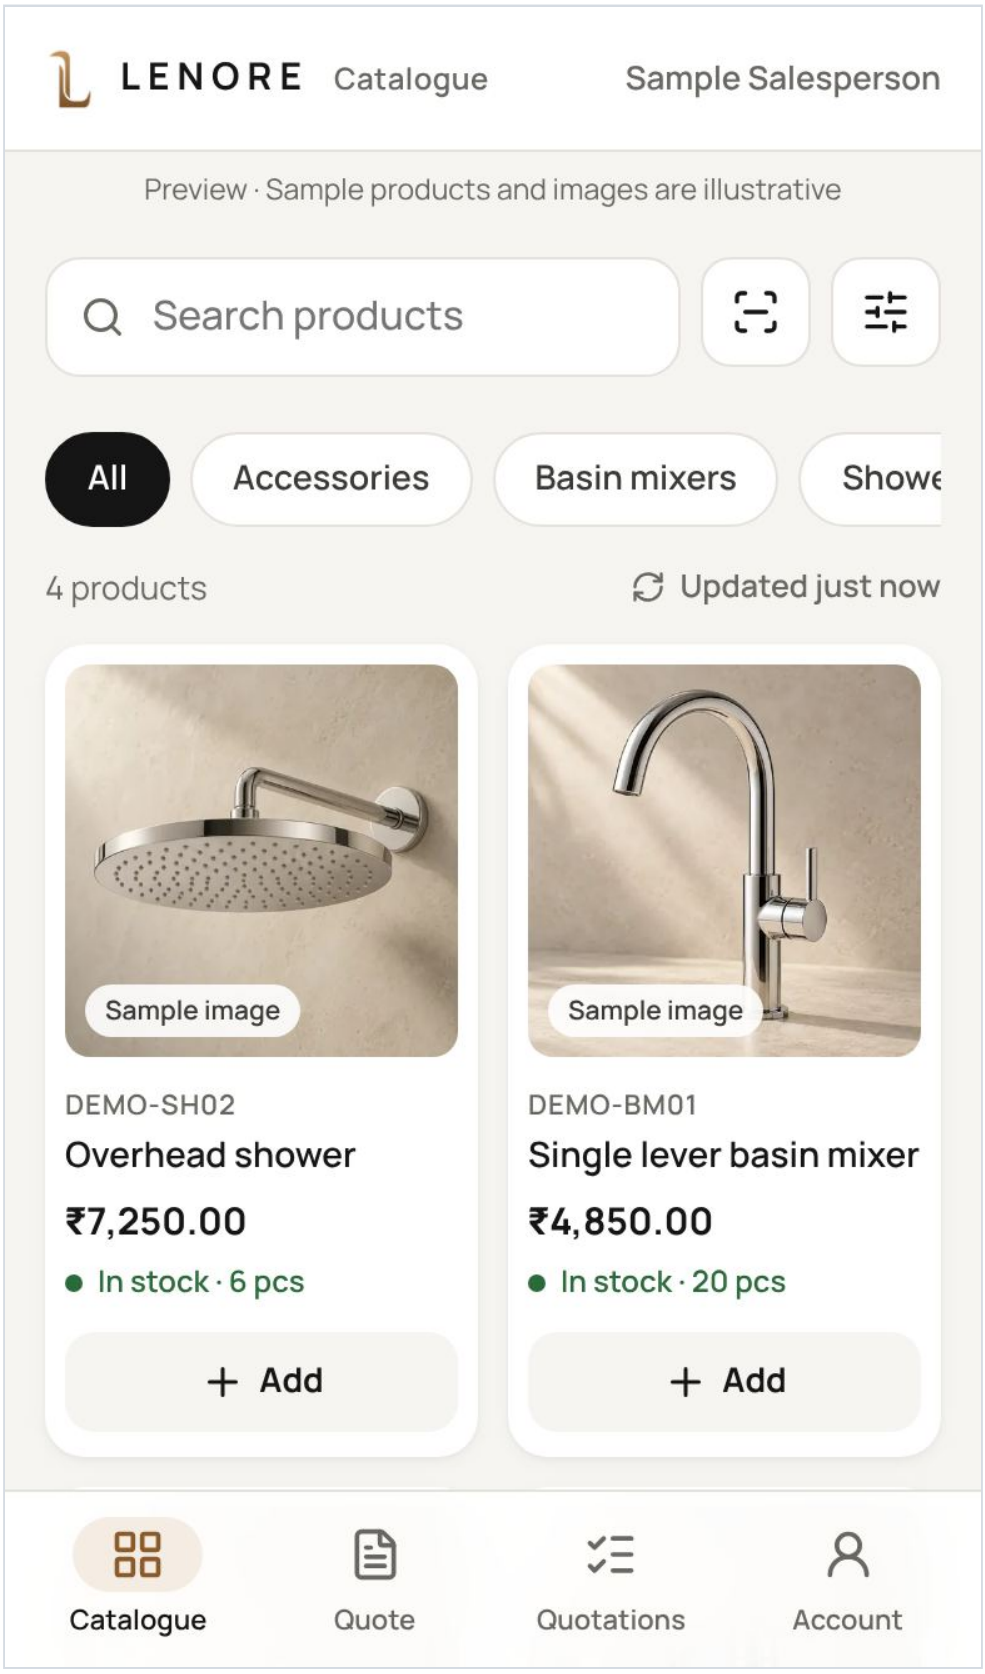

Sign in

When the admin limits the catalogue to the sales team, salespeople sign in with their phone number. A shared team password mode is also available. Sessions last 30 days and an admin can end them at any time.

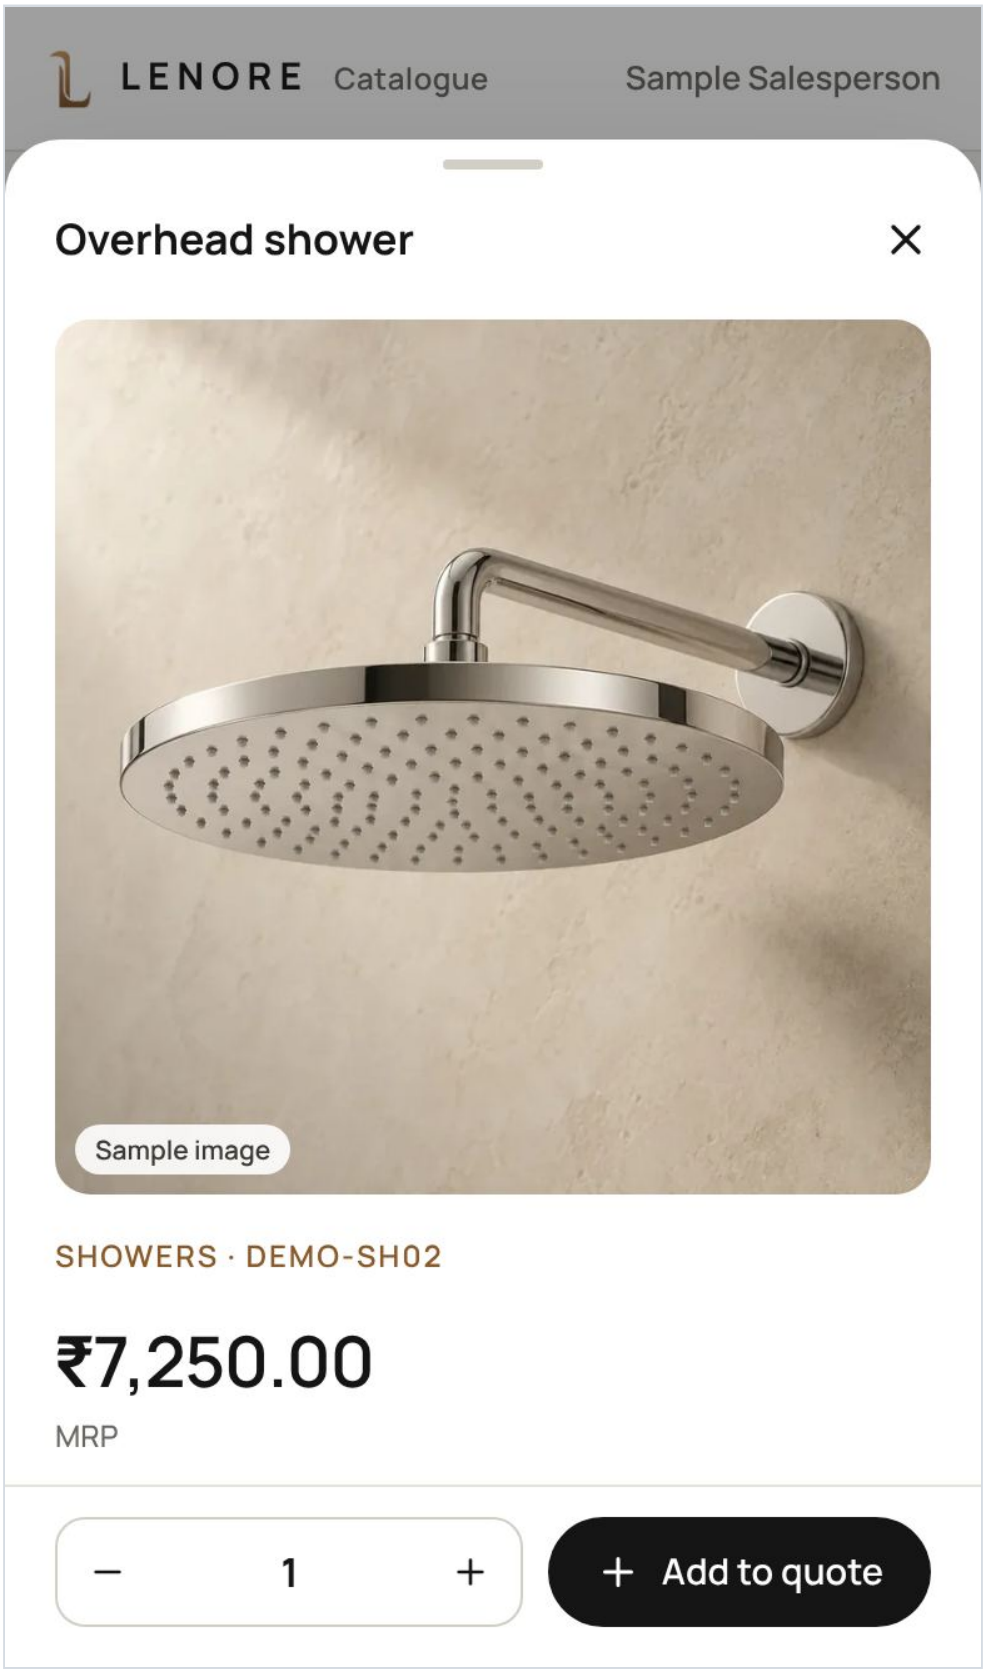

Browse

The salesperson's main screen: instant search by name, code or barcode, a camera barcode scanner, category chips and filters. Salespeople see exact stock. The catalogue opens instantly from the copy saved on the phone and refreshes in the background. Tap Add to put a product on the quote.

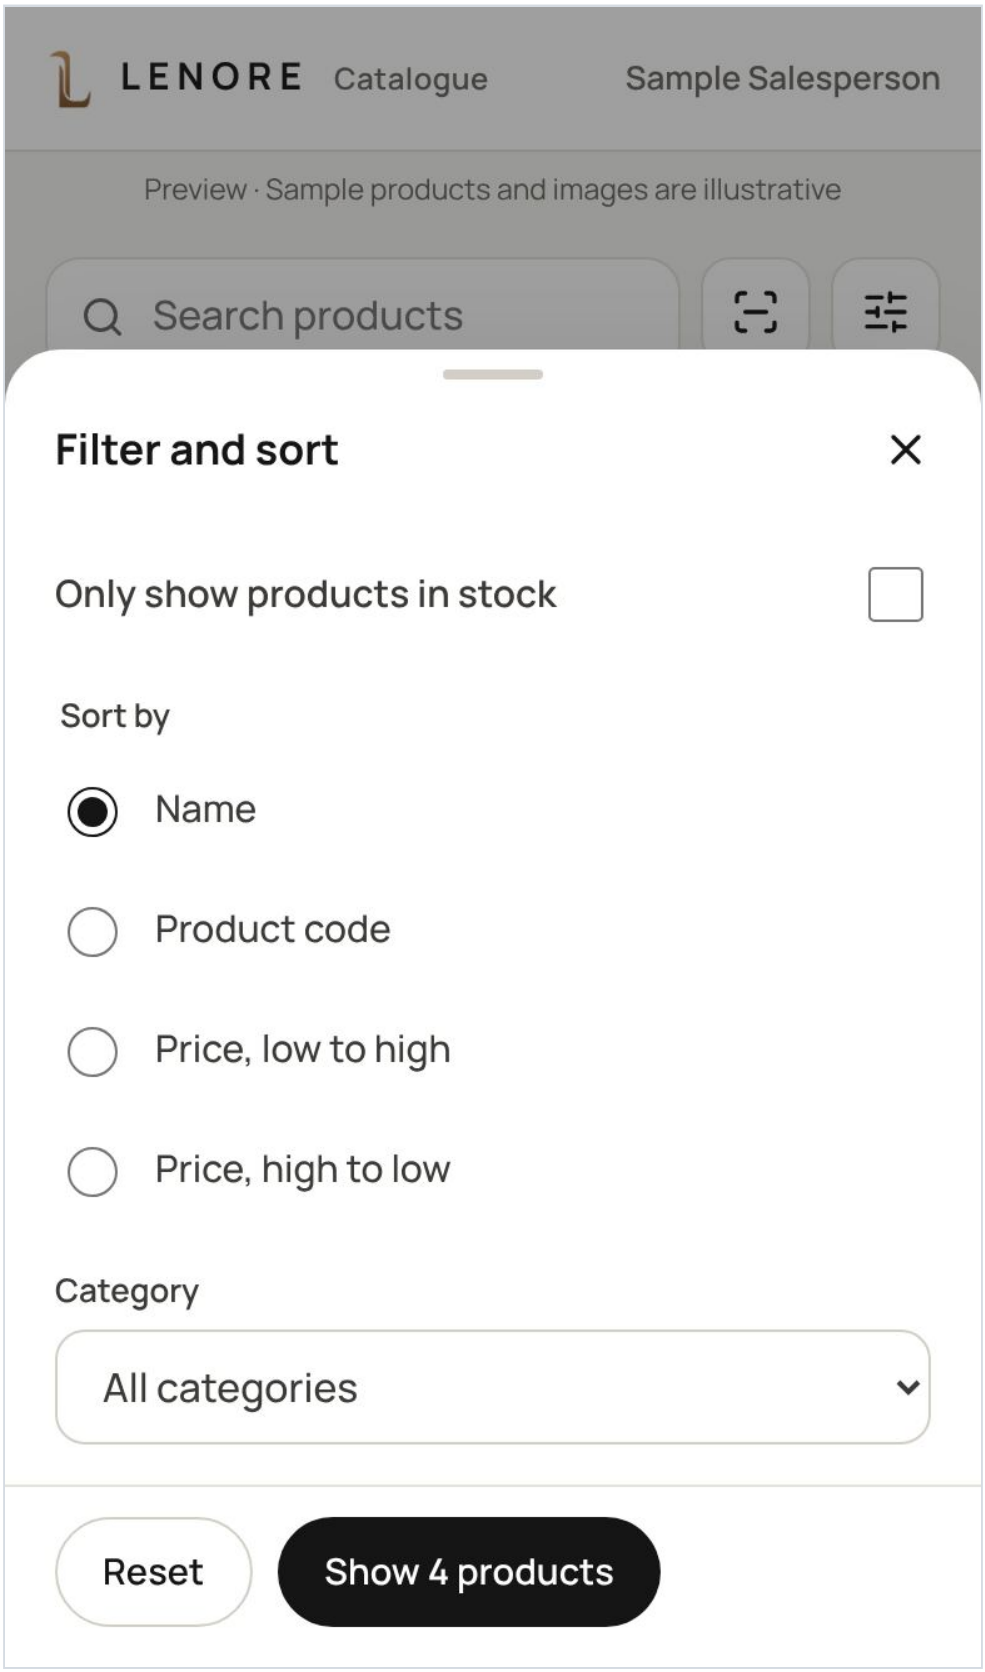

Product sheet

Full product details with photo and specification sheet, shelf location, MRP and stock. The product can be shared on WhatsApp, and a quantity added to the quote.

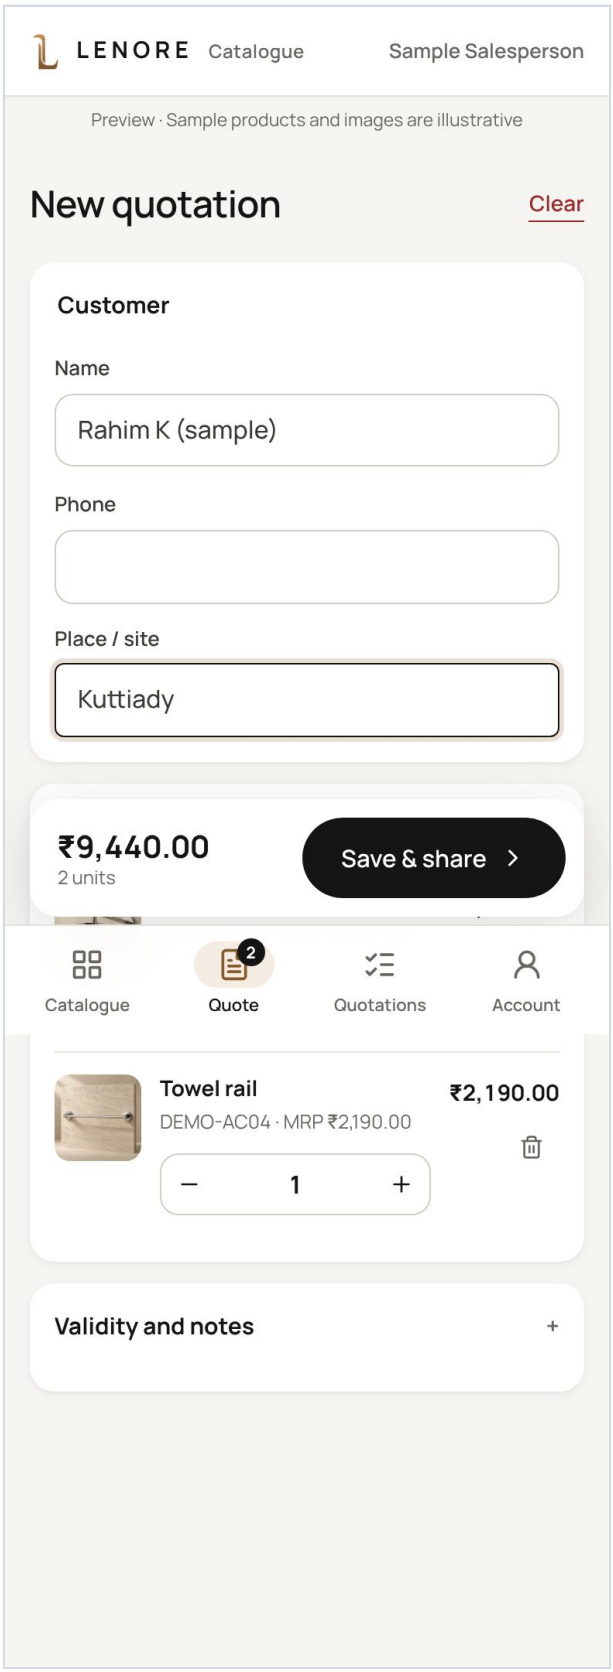

Filter and sort

Show only products in stock, sort by name, code or price, and choose a category.

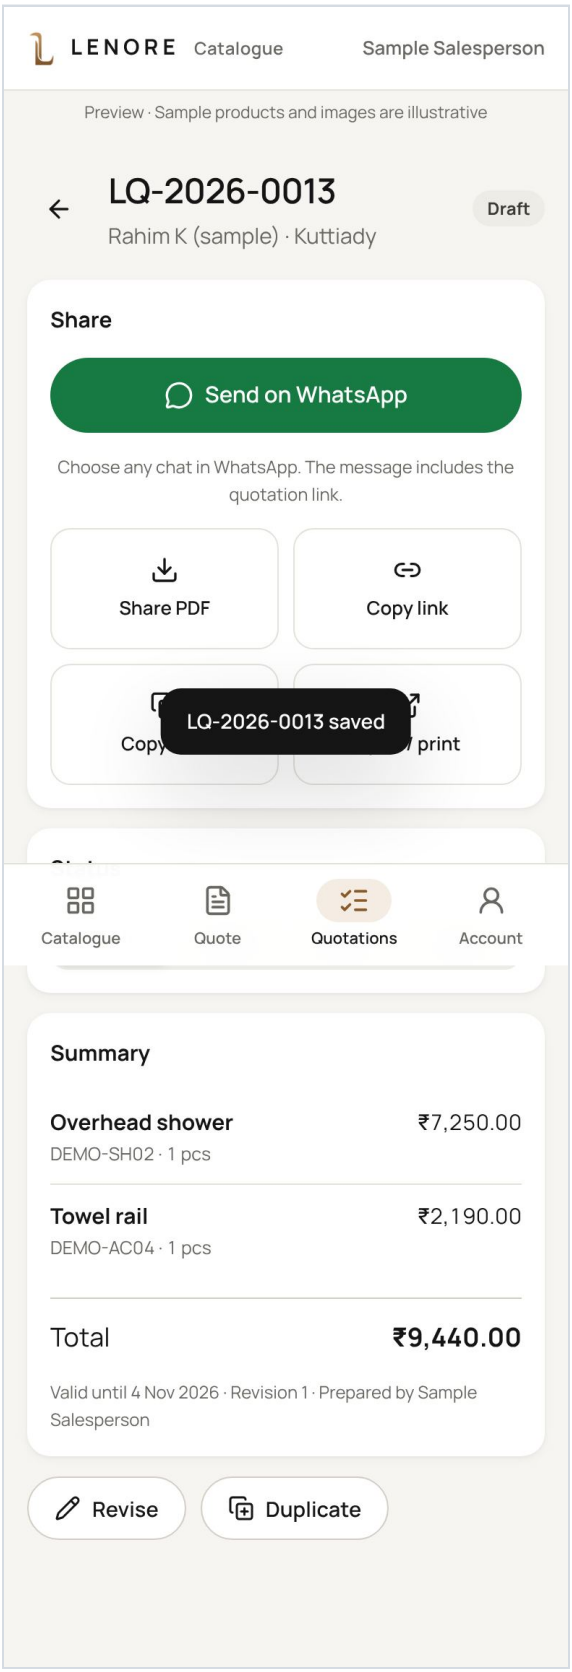

Quote builder

Customer details, quantities and discounts within the limit the admin allows for this salesperson. The draft is saved on the phone while the salesperson works. Totals update live, and Save & share creates a numbered quotation.

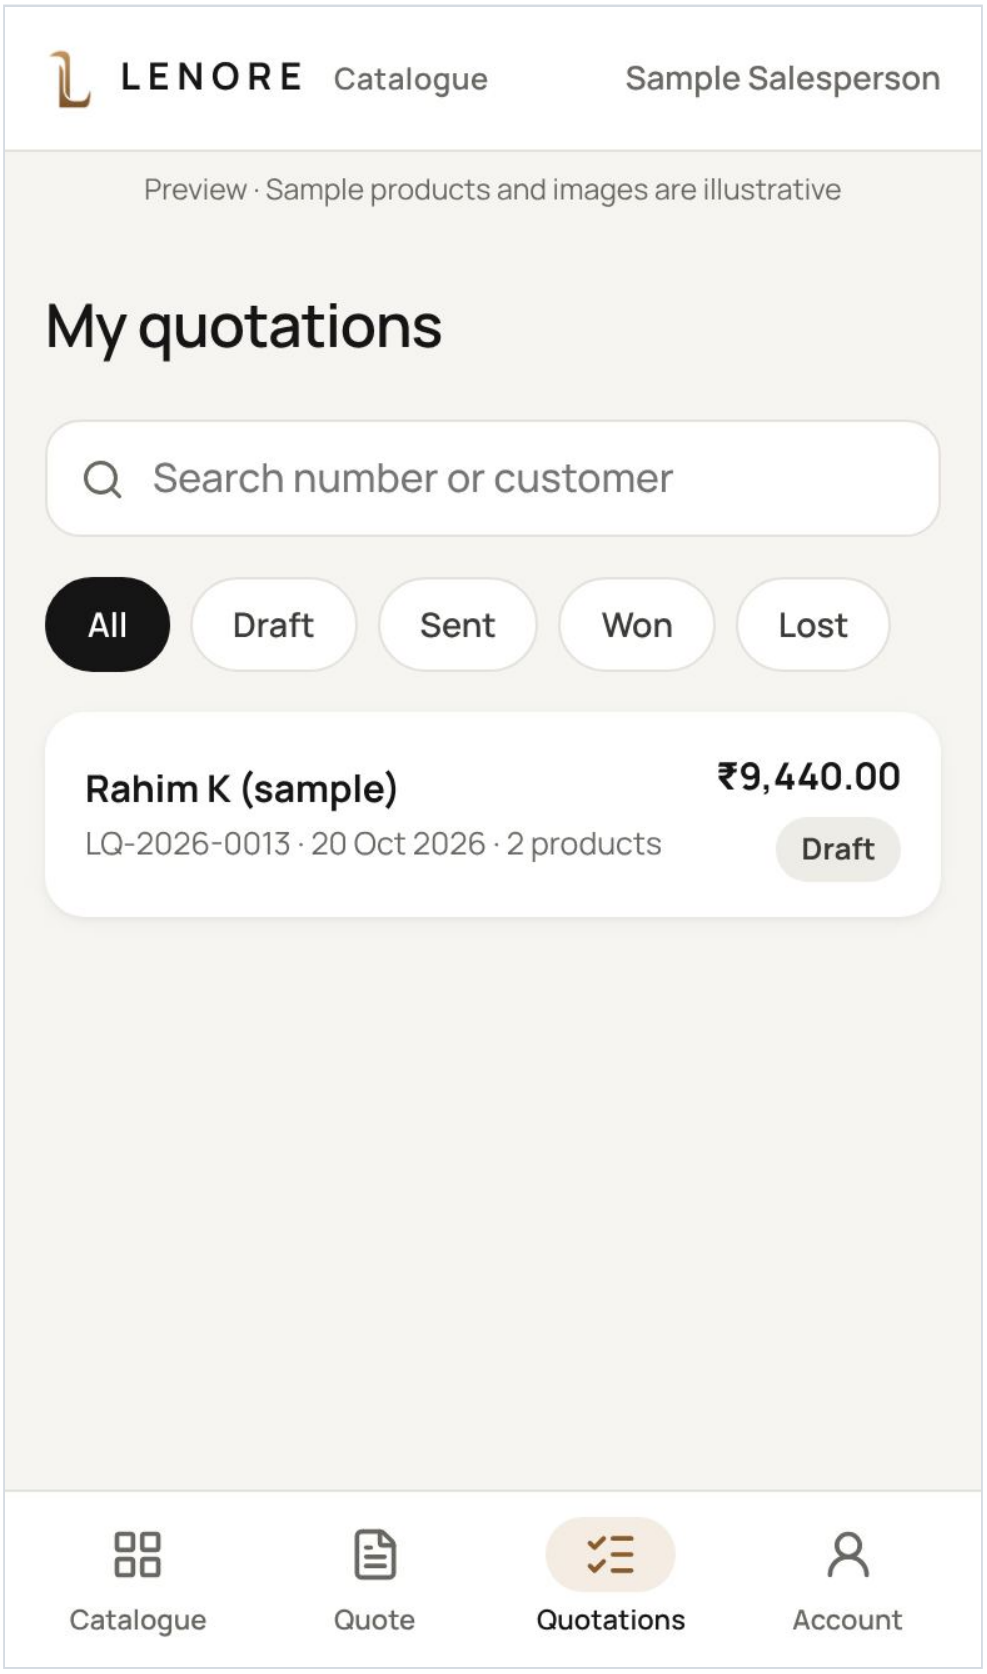

Share a quotation

The main button sends the quotation to any WhatsApp chat with a link to it. The customer's own WhatsApp, a PDF through the phone's share sheet, copy link, copy text and print are also available. Status (draft, sent, won, lost) and revisions are tracked.

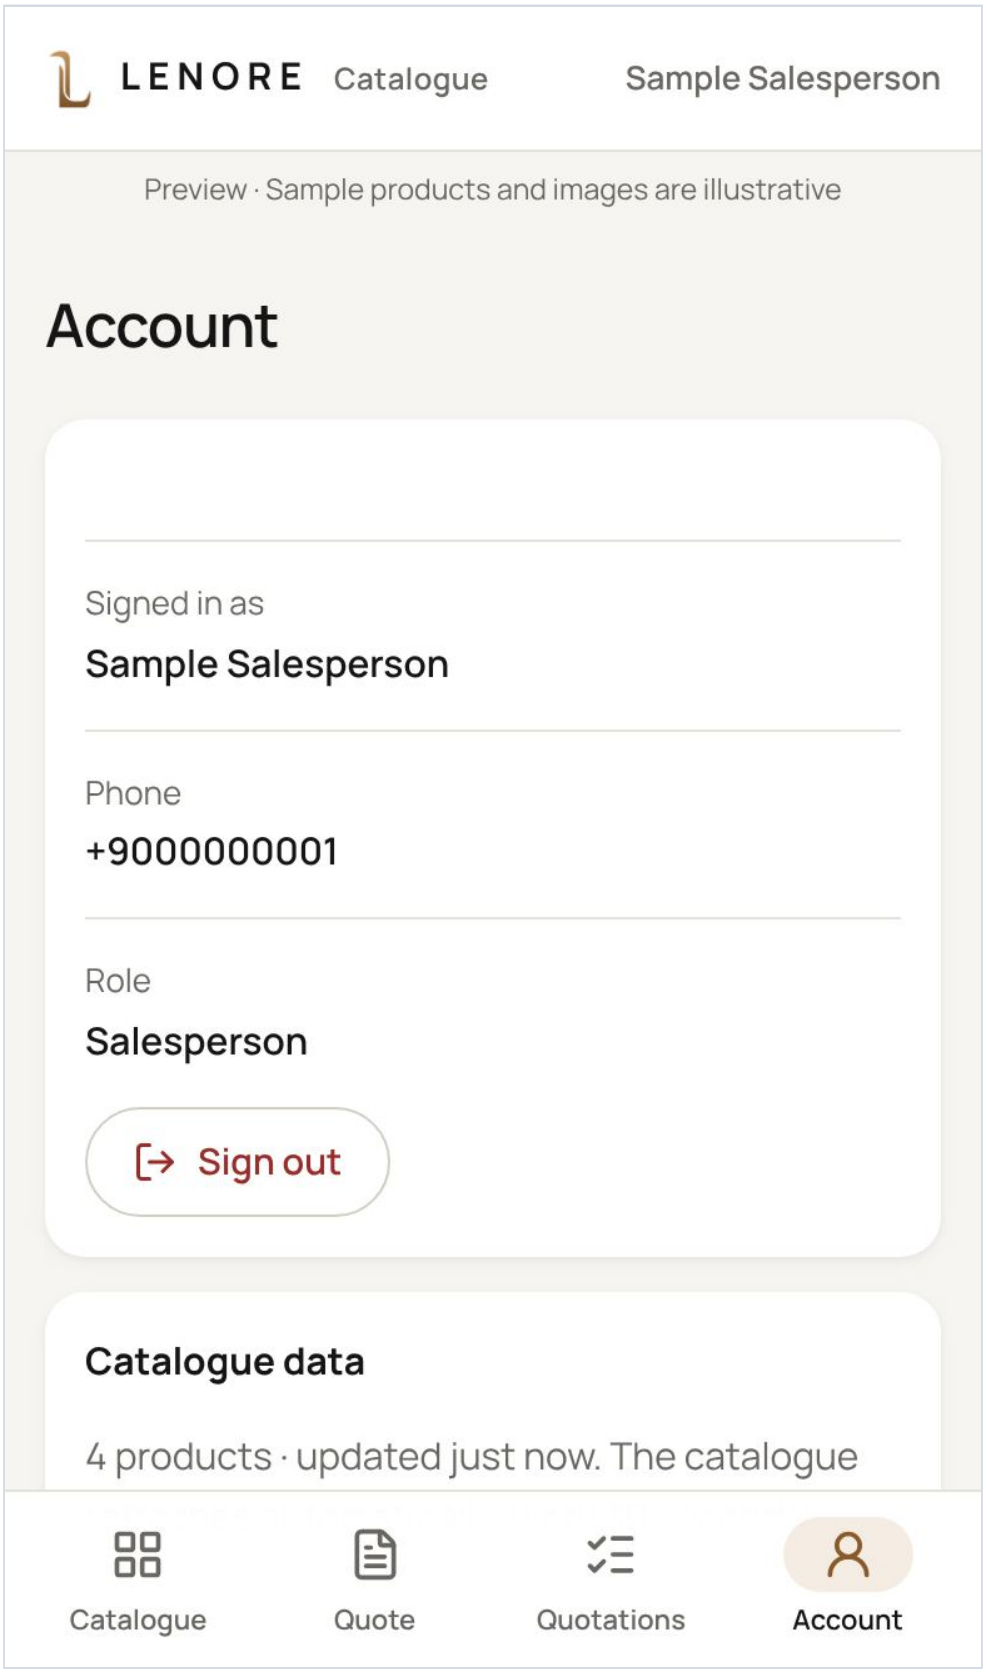

My quotations

Every quotation this salesperson has made, searchable and filterable by status. Each can be opened, shared again, revised (with version history) or duplicated.

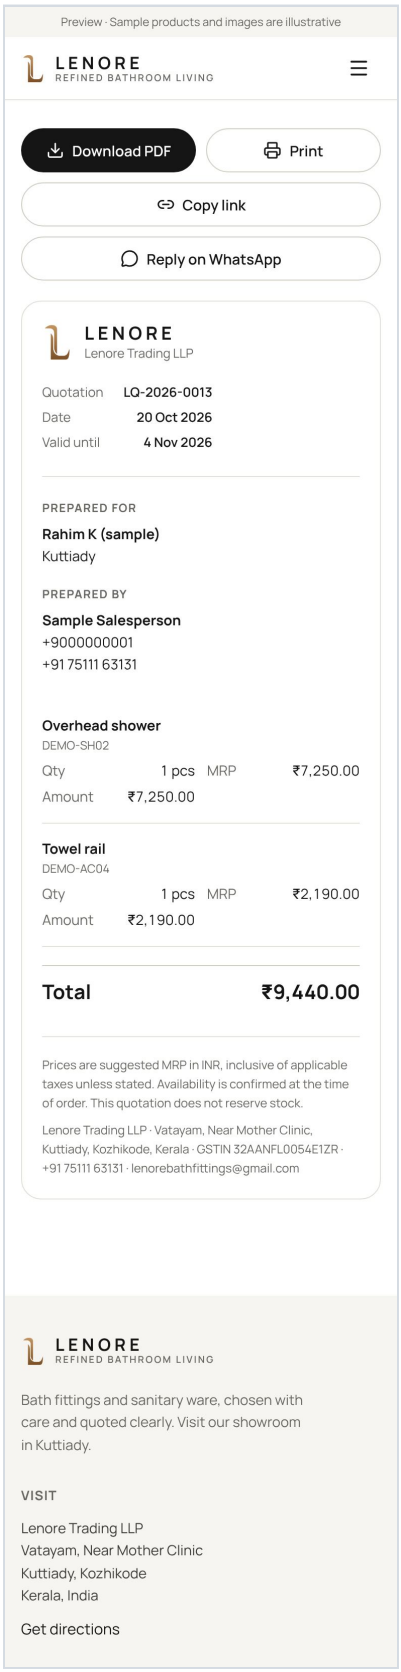

Account

Who is signed in, catalogue sync status, install-as-app and sign out. Signing out clears cached stock and quotation data from shared phones.

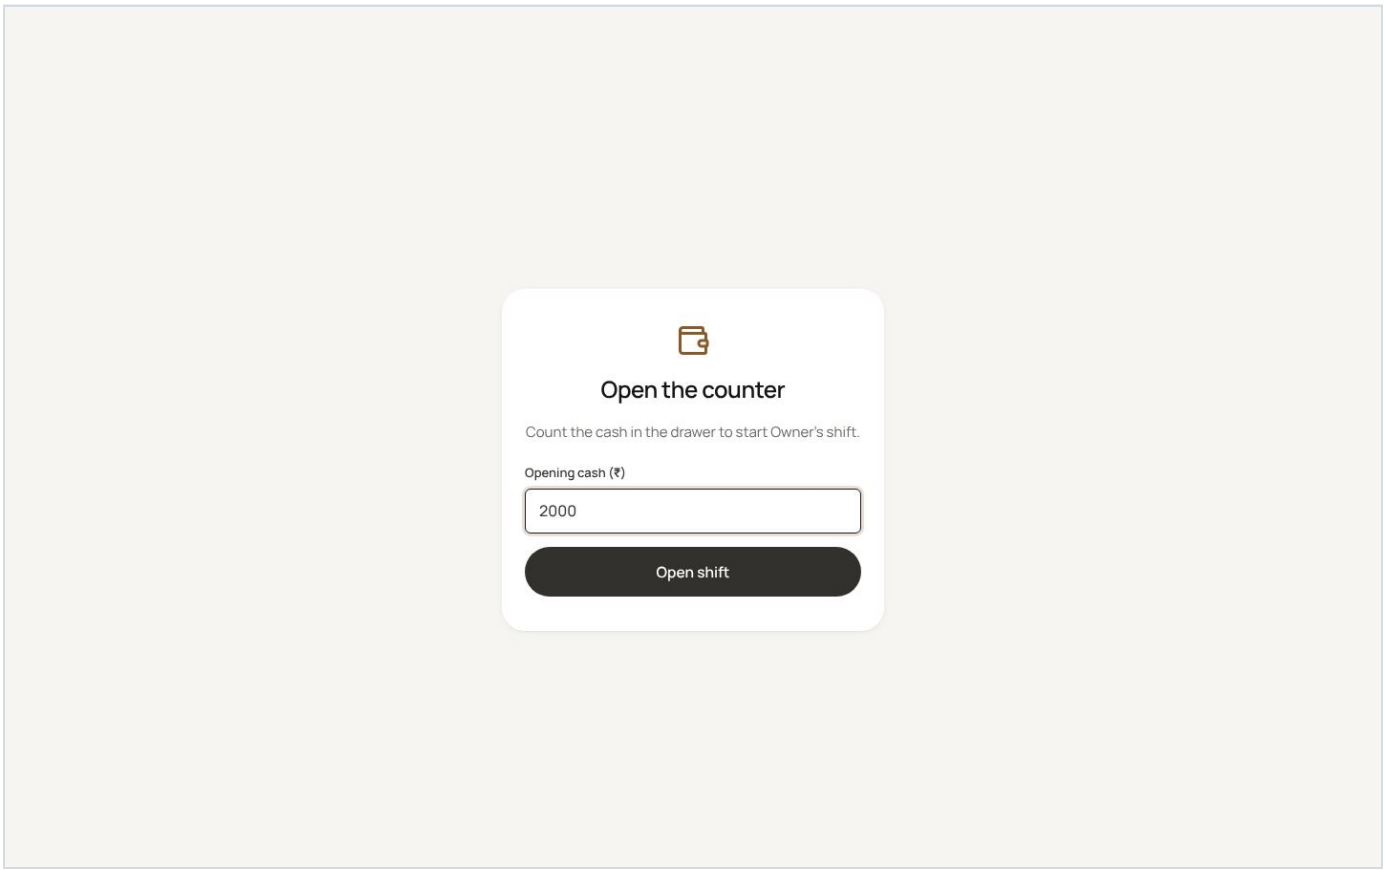

Customer quotation page

What the customer sees when they open the shared link: a branded, mobile-friendly quotation with Lenore's details and GSTIN, totals and terms. They can download a PDF, print or reply on WhatsApp. These pages are hidden from search engines.

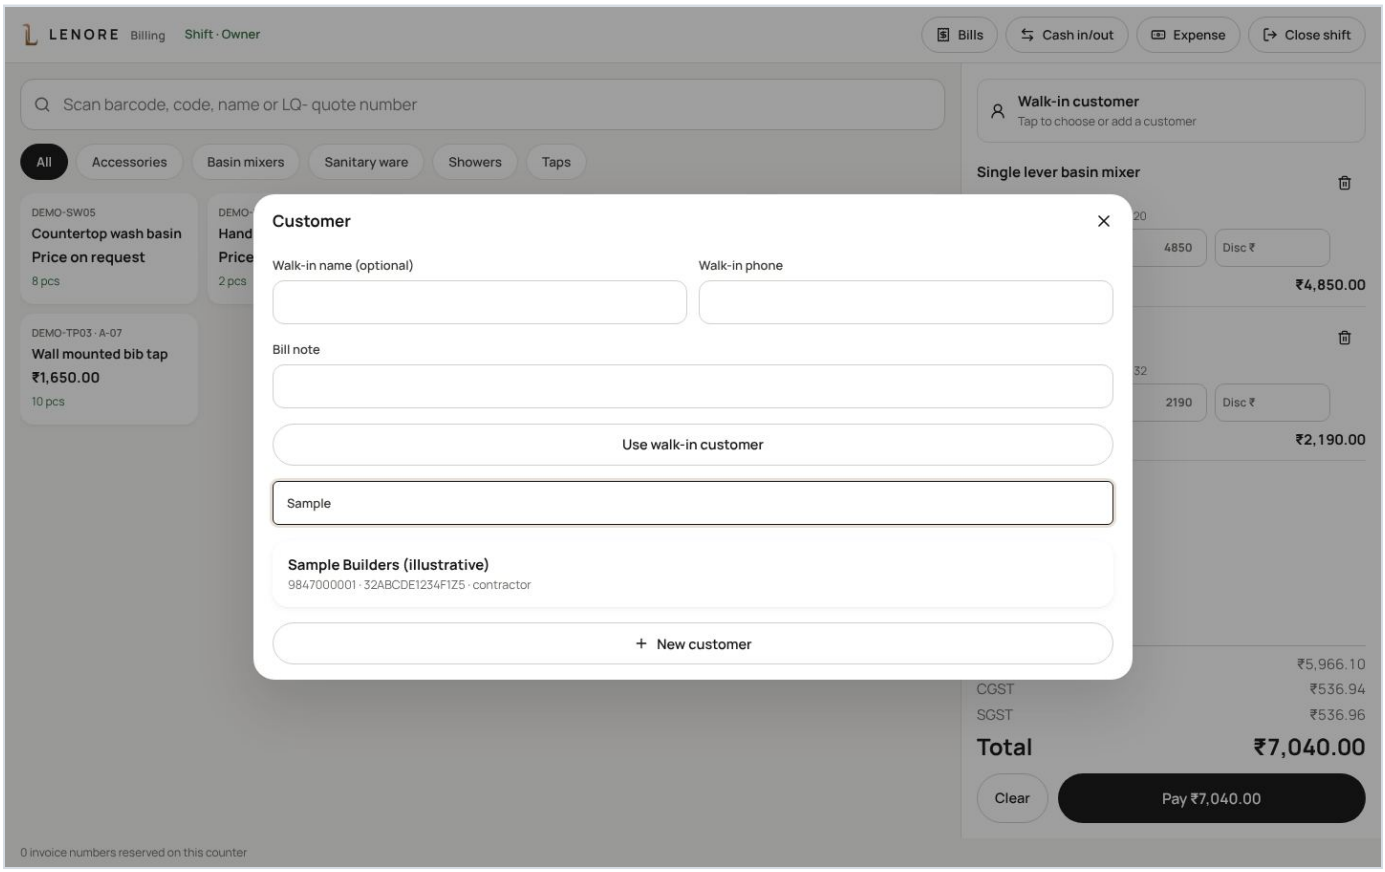

Open the counter

Each cashier shift starts by counting the cash in the drawer. The shift tracks every payment, refund, cash movement and drawer expense until it is closed.

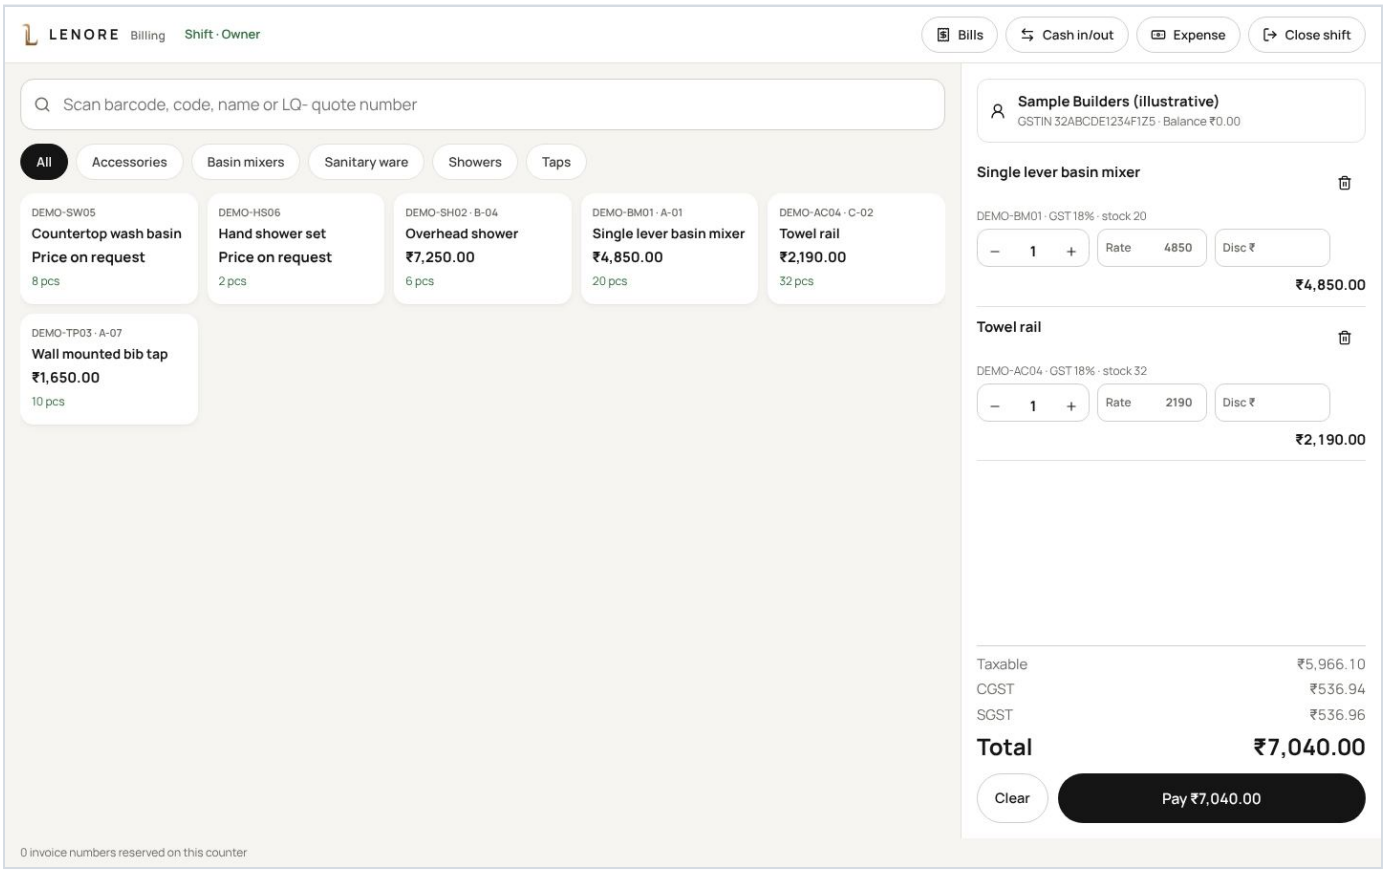

Choose a customer

Walk-in sale, a saved customer (with GSTIN for B2B invoices, credit balance and price list), or a quick new customer. A customer from another state switches the bill to IGST automatically.

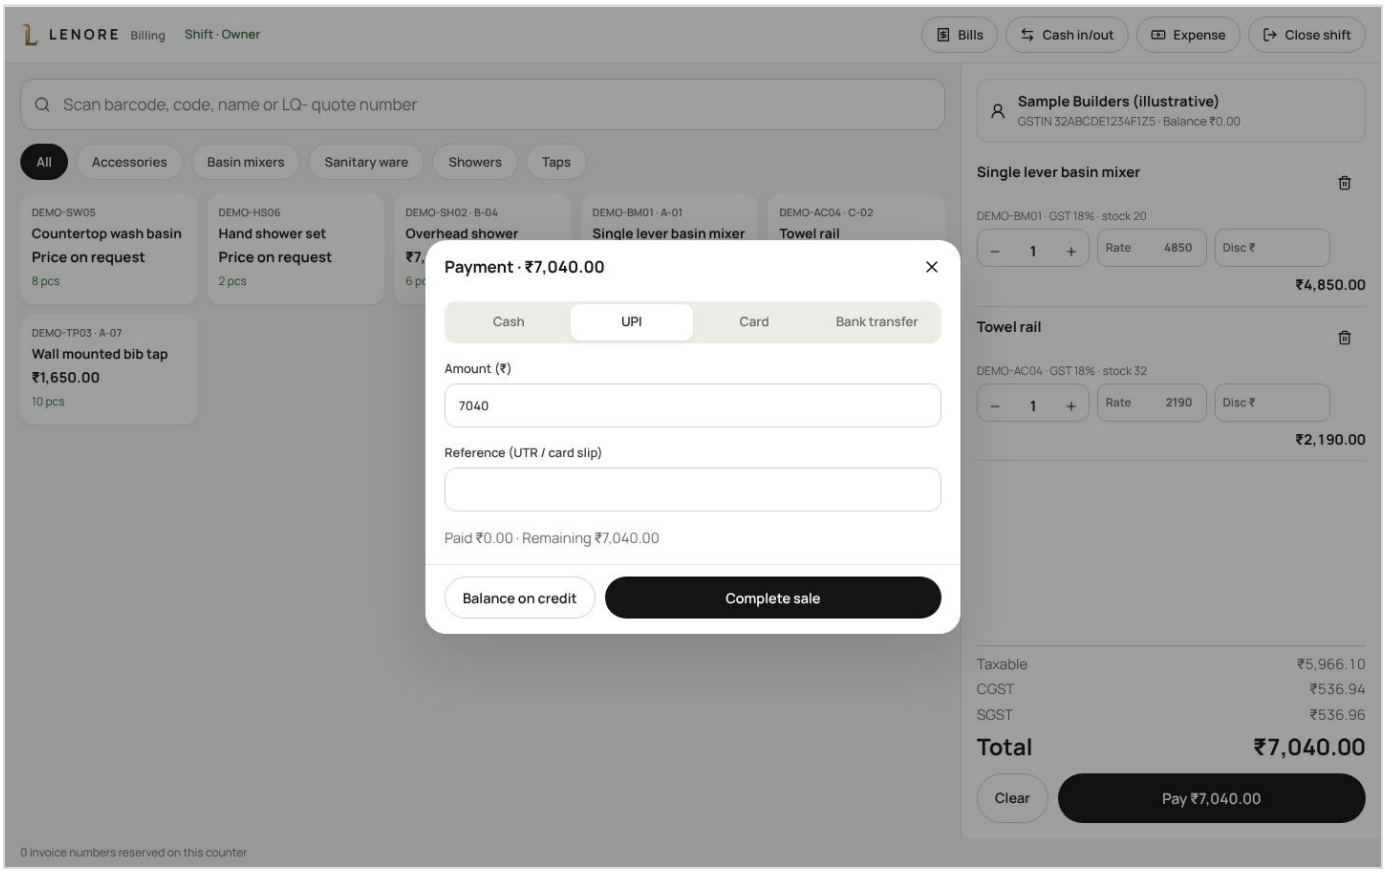

Bill

Scan barcodes or tap products. Rates and discounts are checked against MRP and the cashier's limit. The GST breakdown (taxable value, CGST/SGST or IGST, round-off) updates live. A quotation number (LQ-…) can be typed to load a quote into the bill.

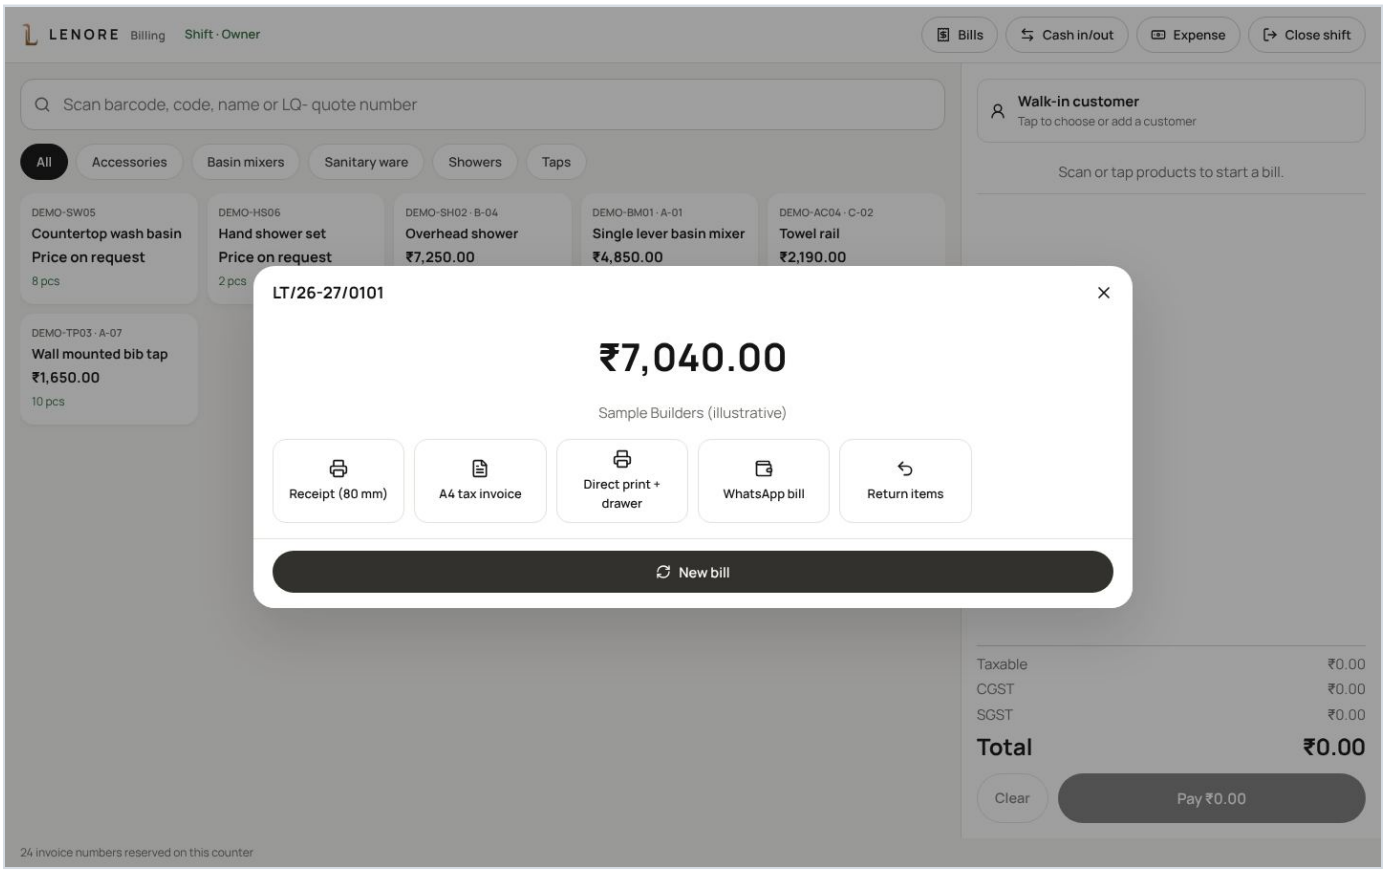

Payment

Cash (with change calculated), UPI, card or bank transfer, in any combination. For a saved customer, the remainder can be left on credit within their limit.

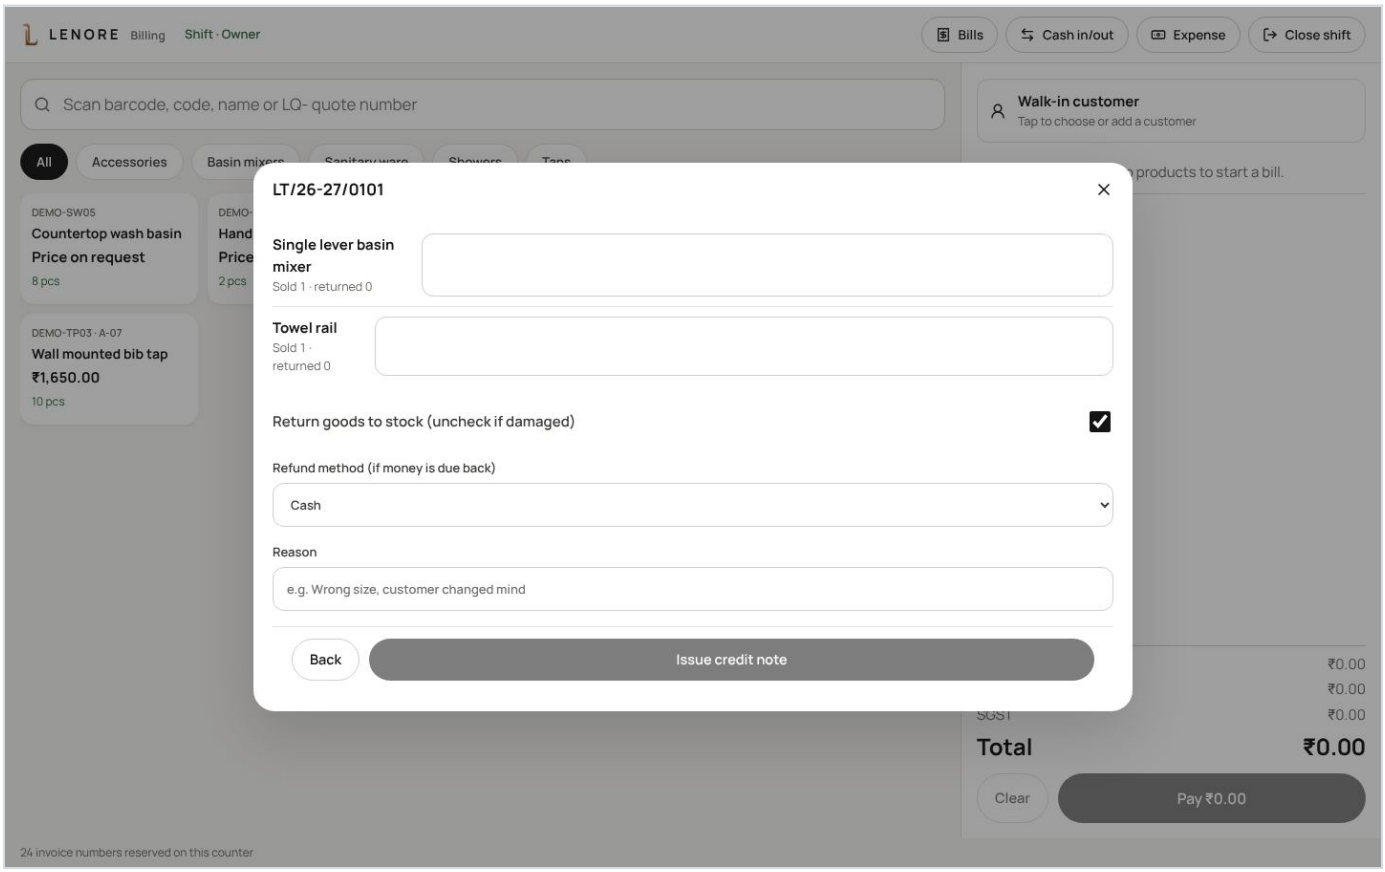

Sale complete

The invoice gets a legal GST number (for example LT/26-27/0007). Print an 80 mm receipt or an A4 tax invoice, print straight to a USB receipt printer and open the cash drawer, or WhatsApp the bill. Returns and payments can be recorded from here too.

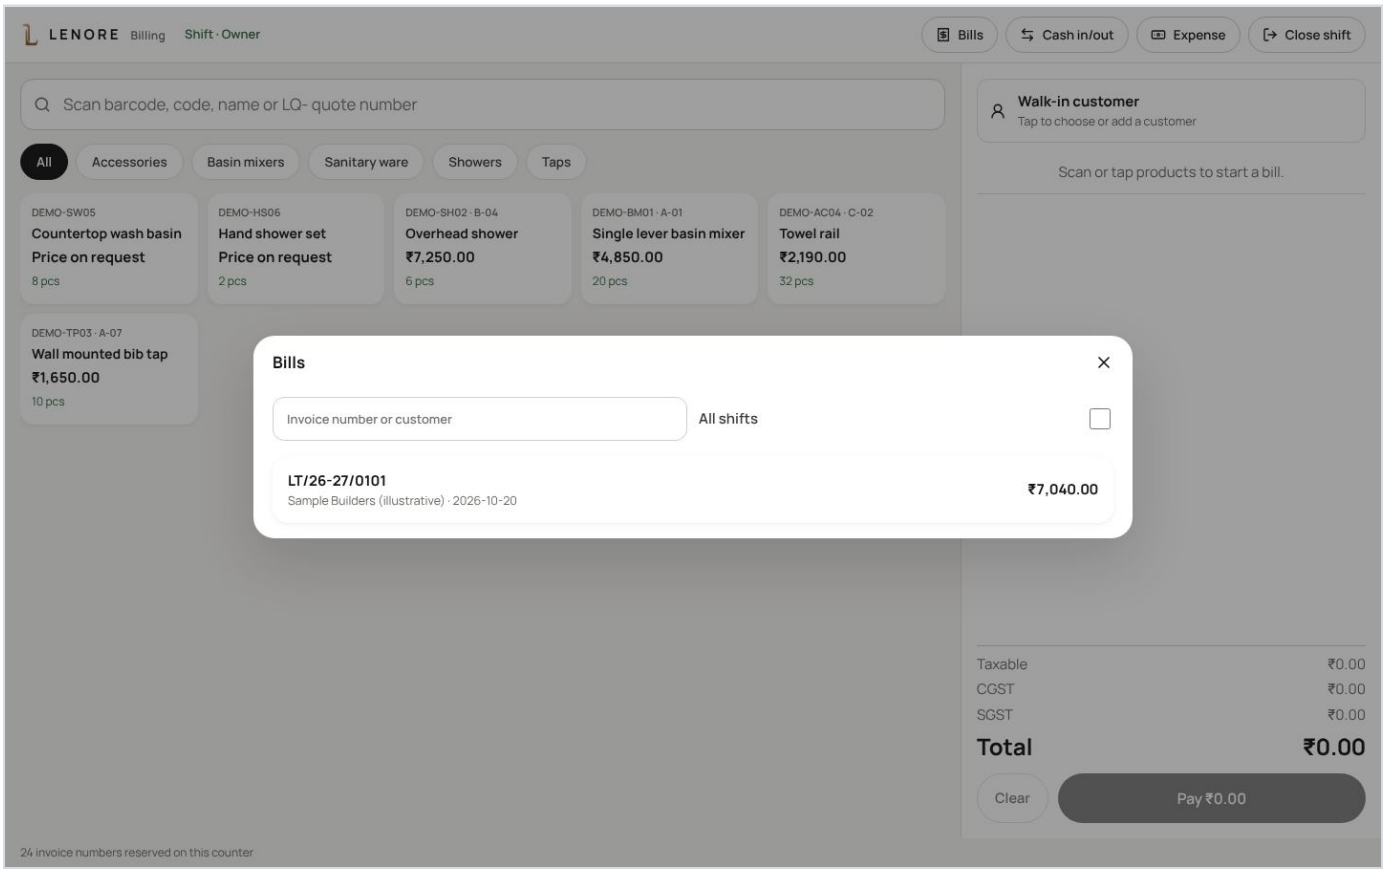

Return items

Partial or full returns create a numbered credit note. Goods can go back into stock or be written off as damaged, and any refund due is calculated automatically.

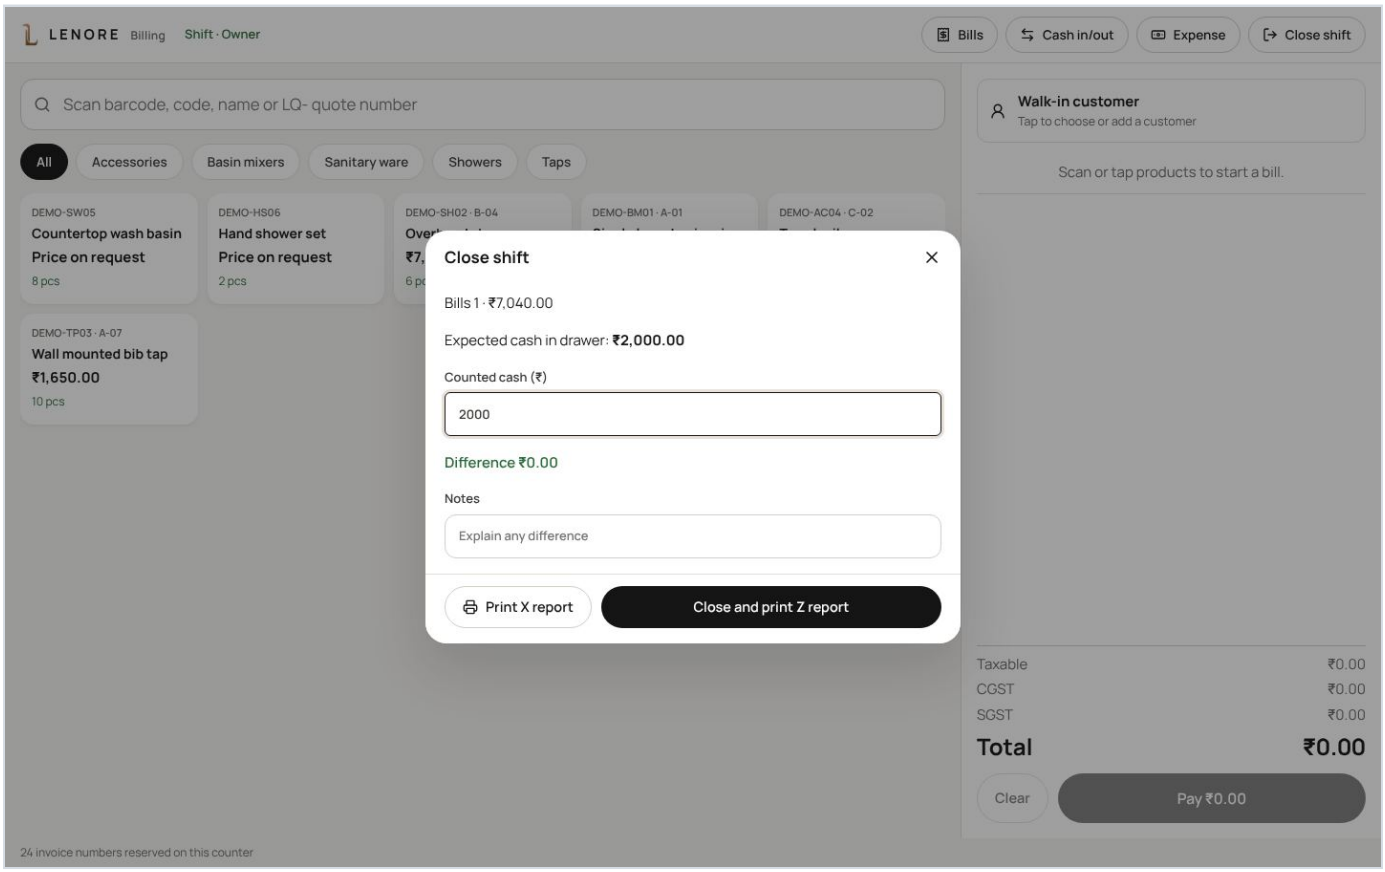

Bills

This shift's bills (or all bills), searchable for reprints, returns and balance collection. Bills waiting to sync after an outage are listed at the top.

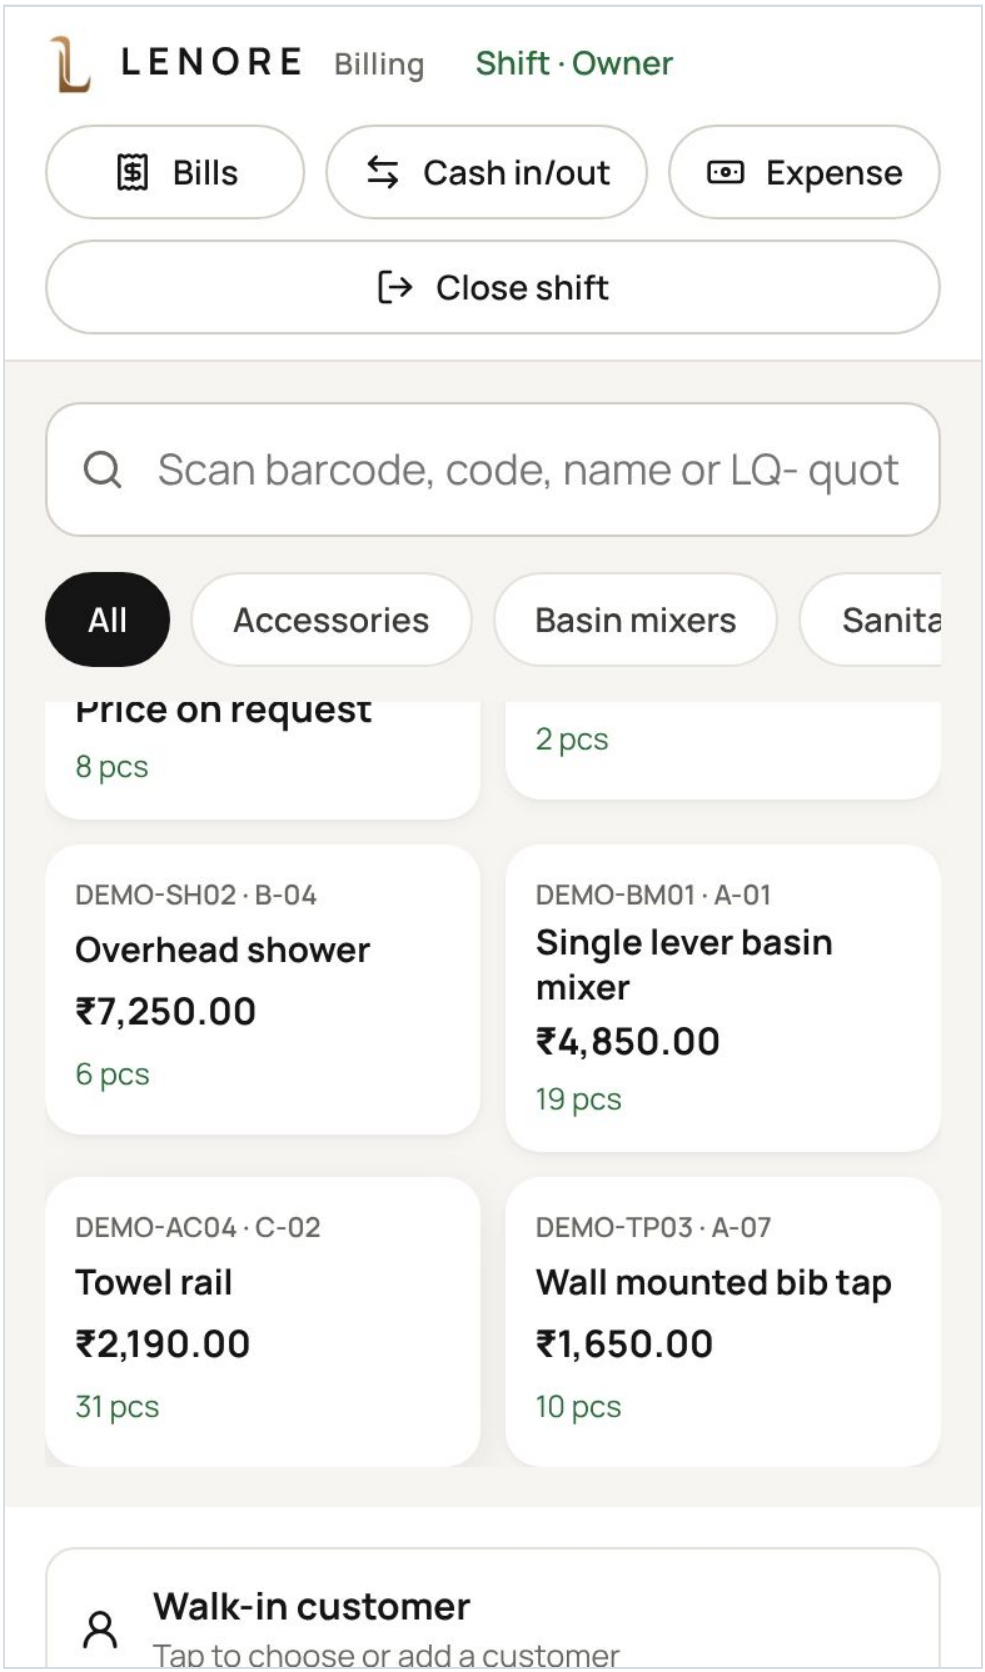

Close shift

Count the drawer; the expected cash and any difference are shown, then a Z report prints. An X report can be printed at any time without closing.

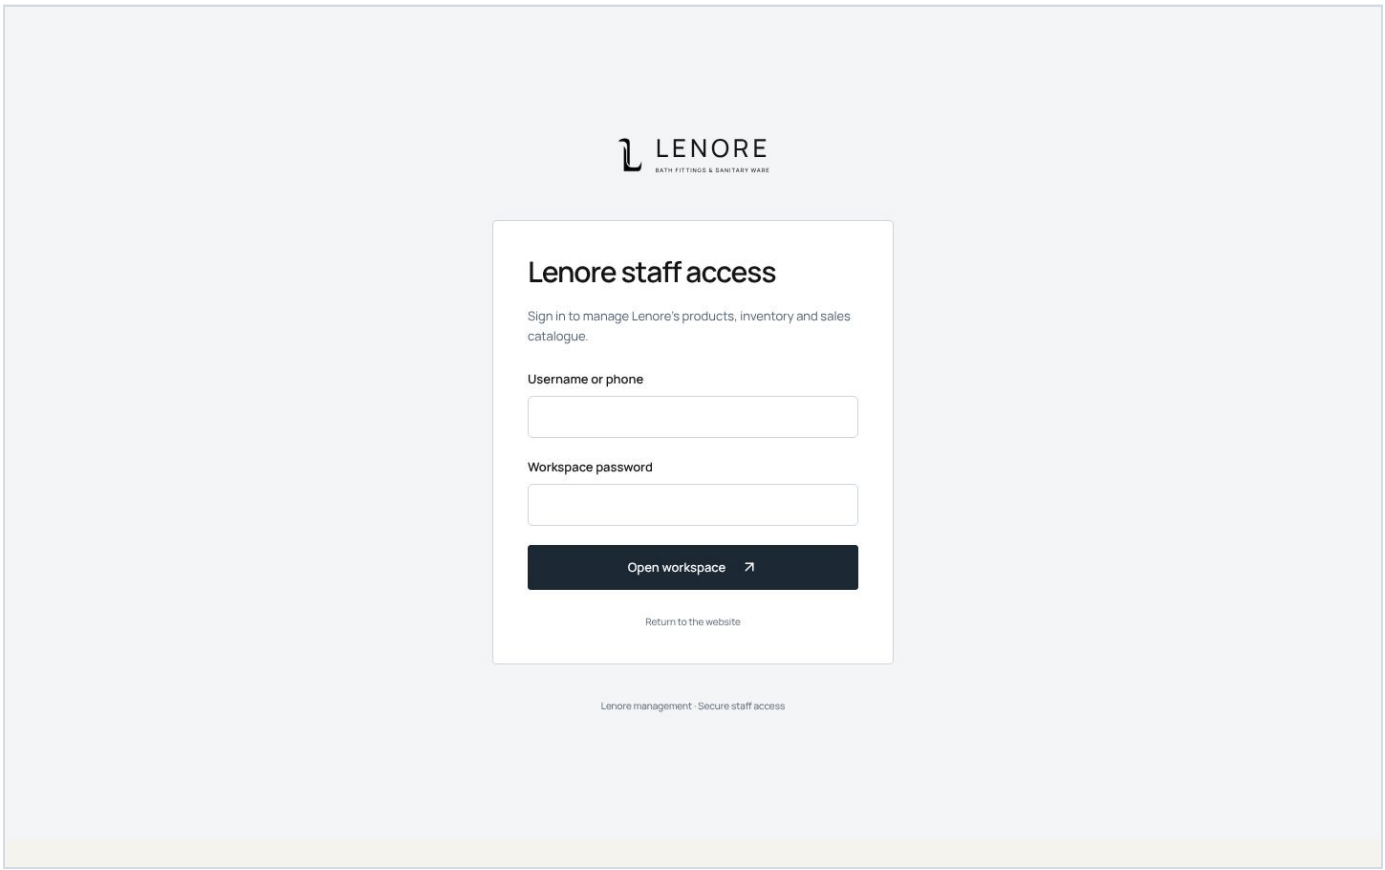

Counter on a phone

The same counter works on a phone or tablet; the bill appears below the products.

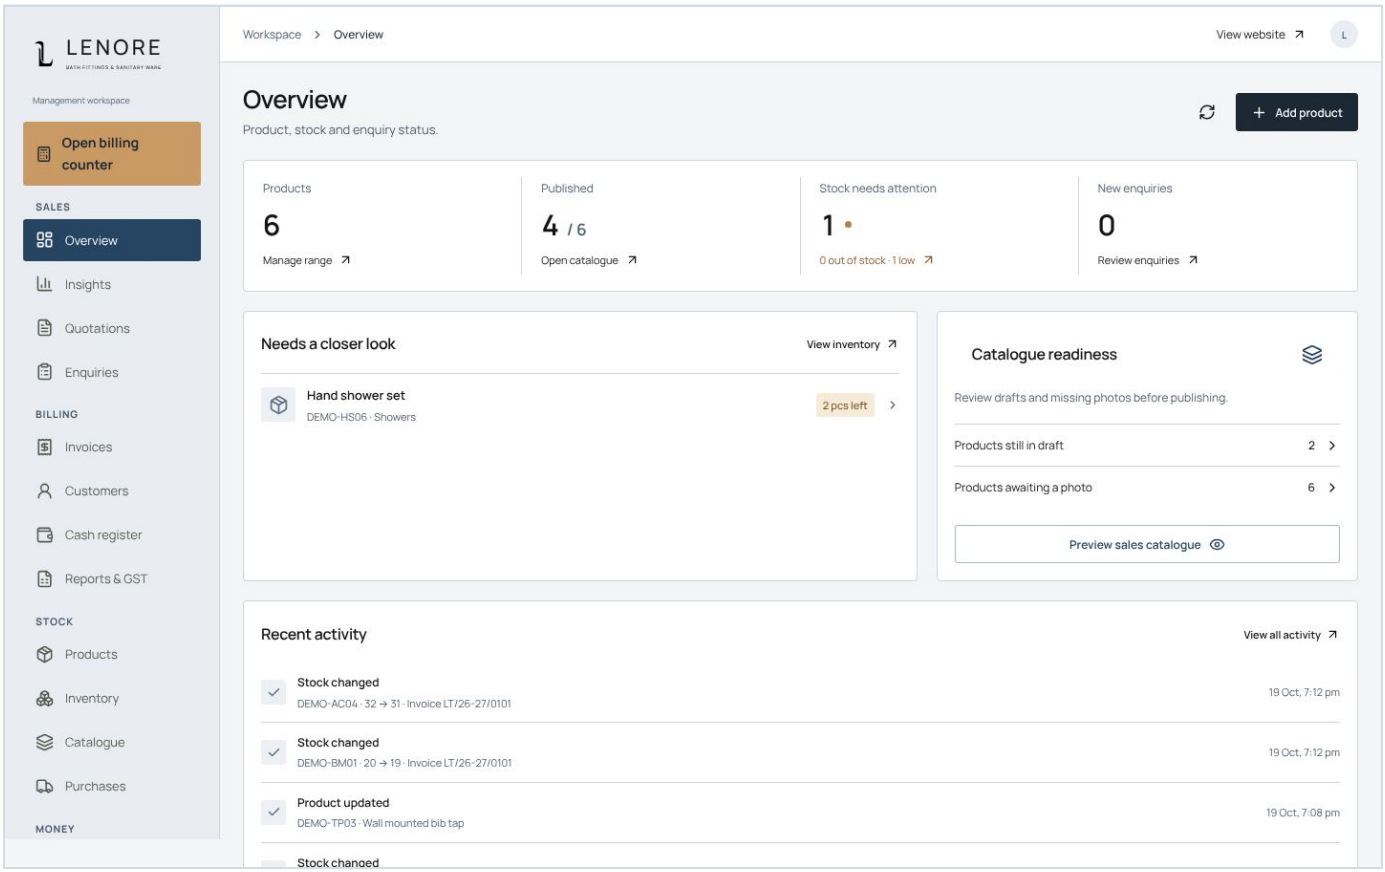

Staff sign-in

Admins sign in with the owner username or their phone number. Salesperson accounts are directed to the catalogue instead.

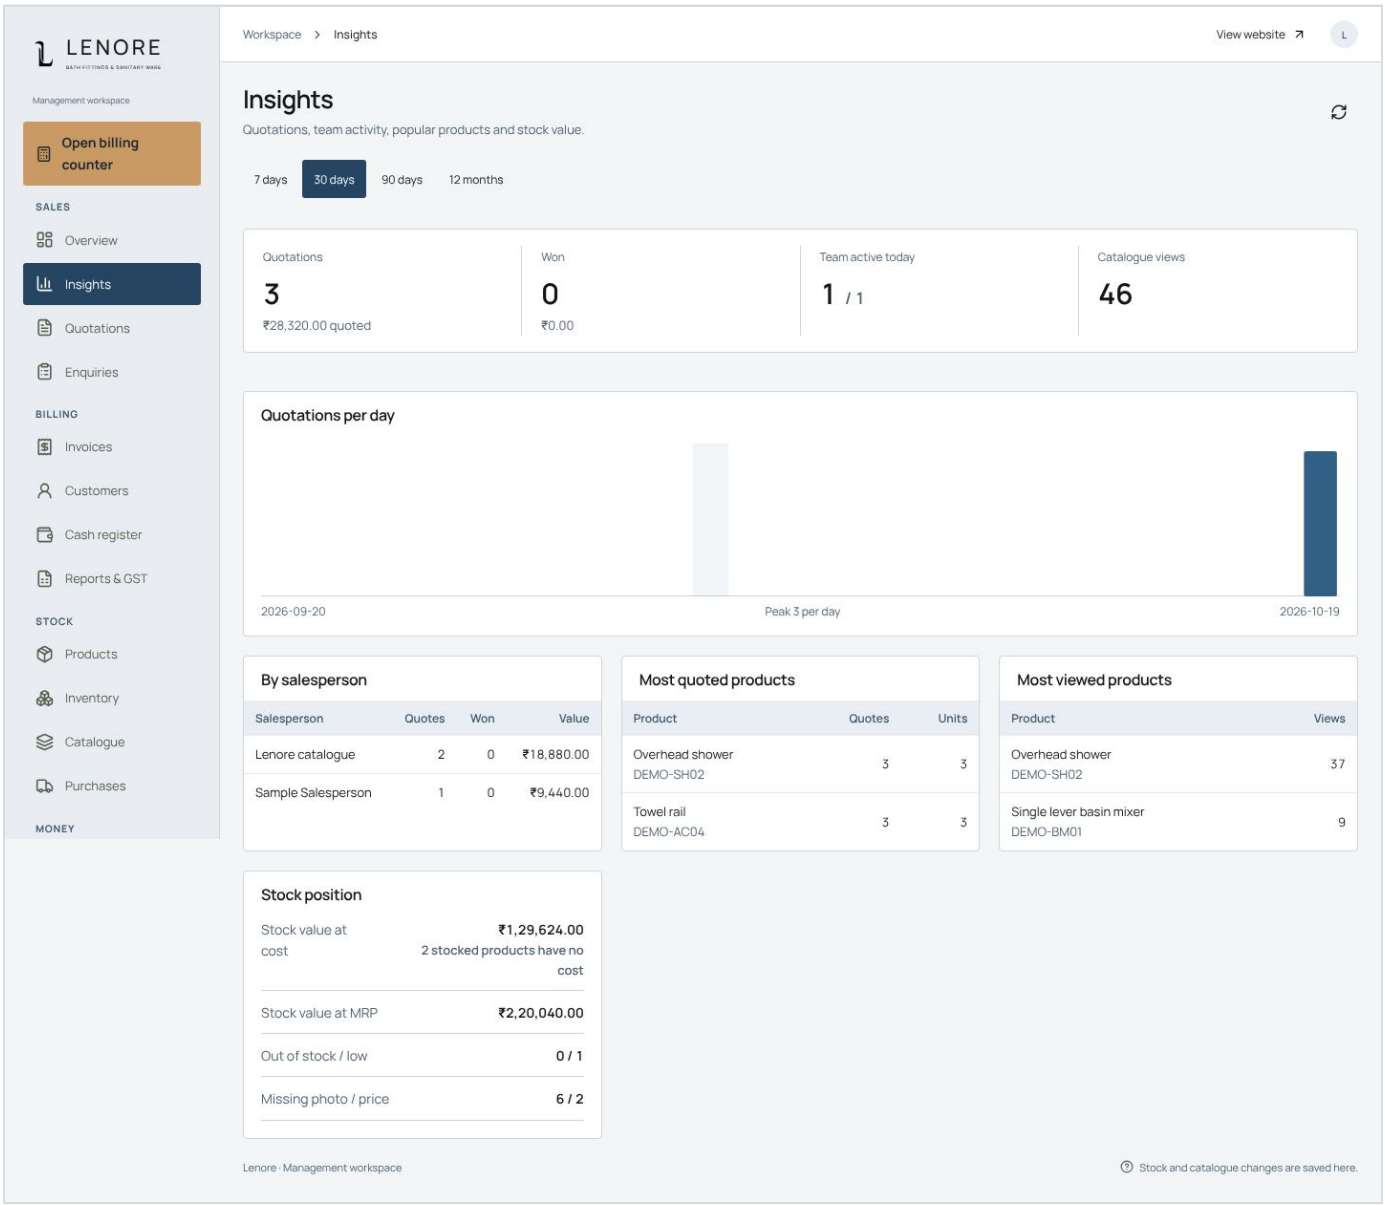

Overview

Daily snapshot: products, publication, stock needing attention, catalogue completeness, new enquiries and recent activity. The sidebar groups every section and has a button to open the billing counter.

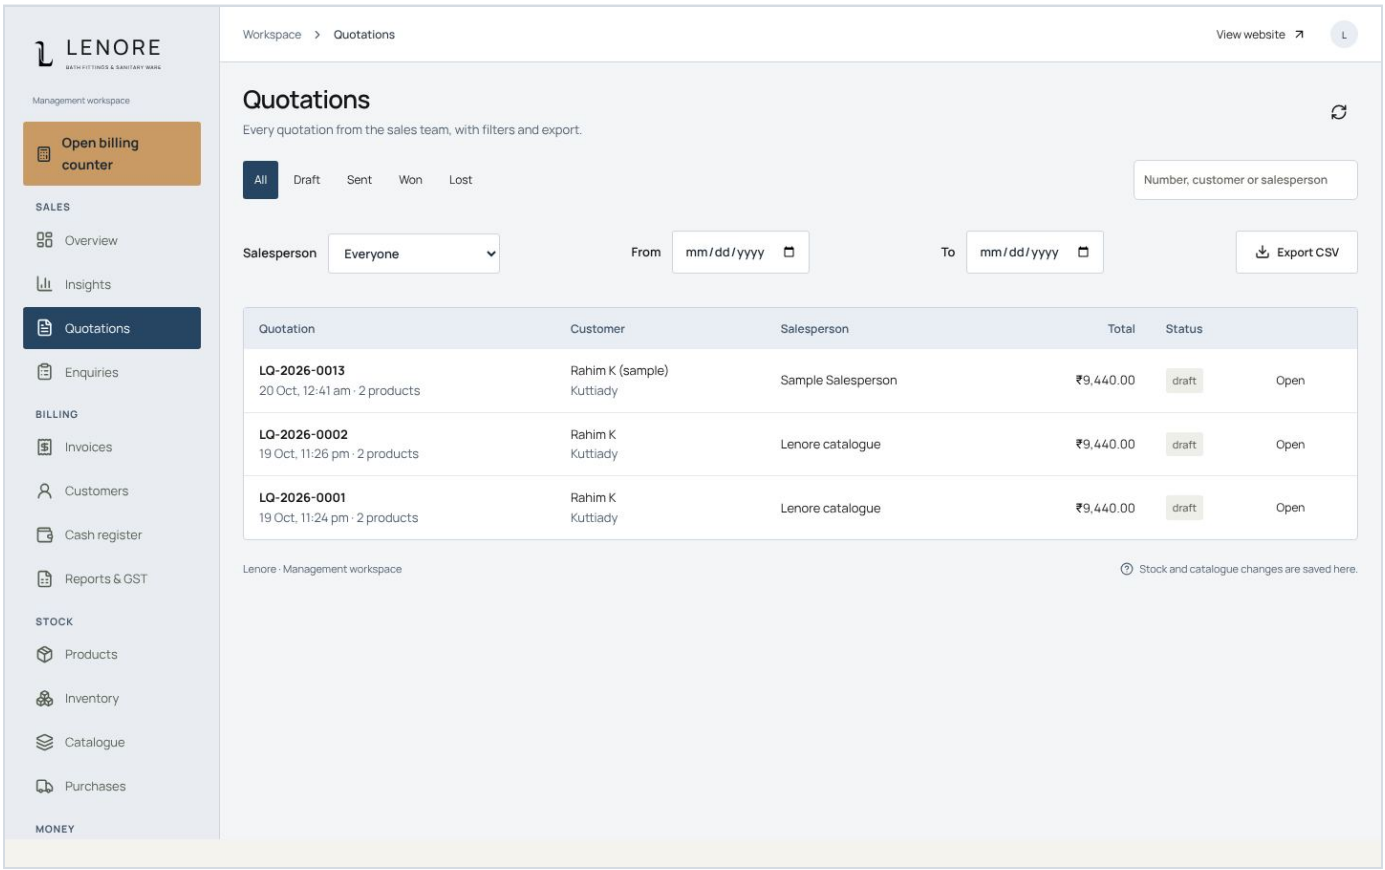

Insights

Quotations per day, value quoted and won, performance by salesperson, most quoted and most viewed products, stock value at cost and MRP, and team activity.

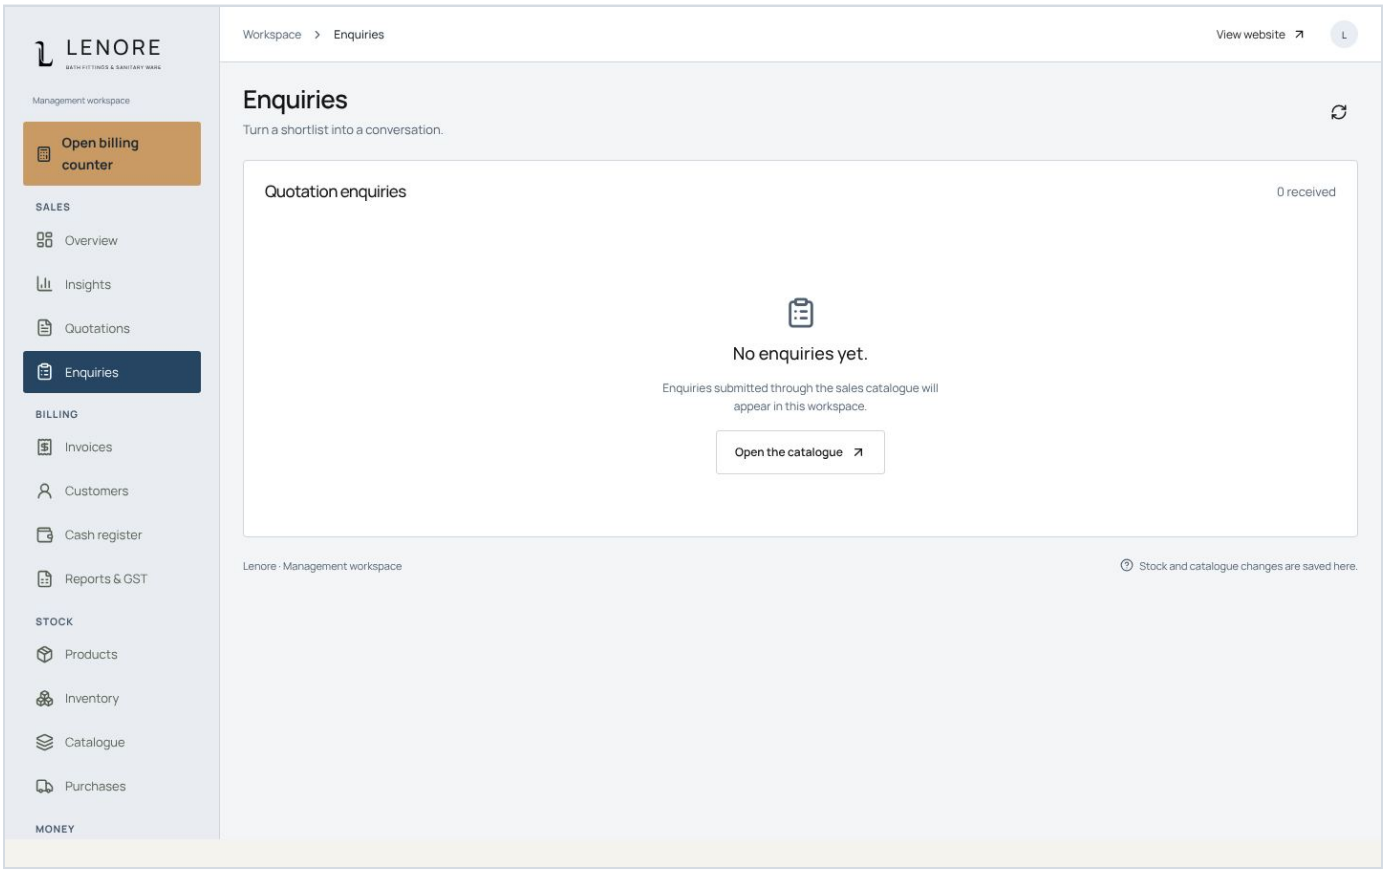

Quotations

Every quotation from the team, filterable by salesperson, status and date, with CSV export and links to the customer page.

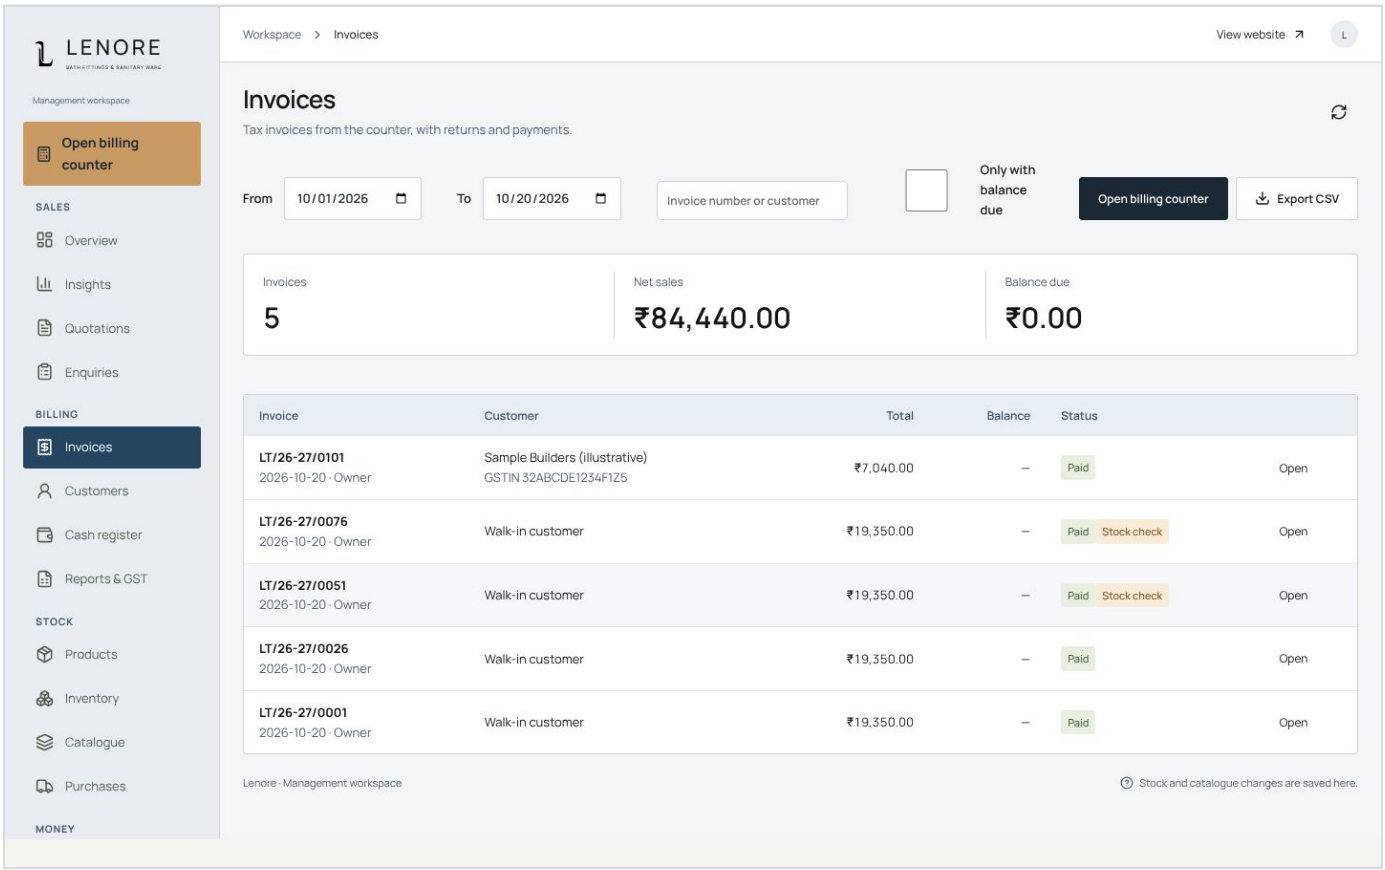

Enquiries

Messages from the website enquiry form, with follow-up status.

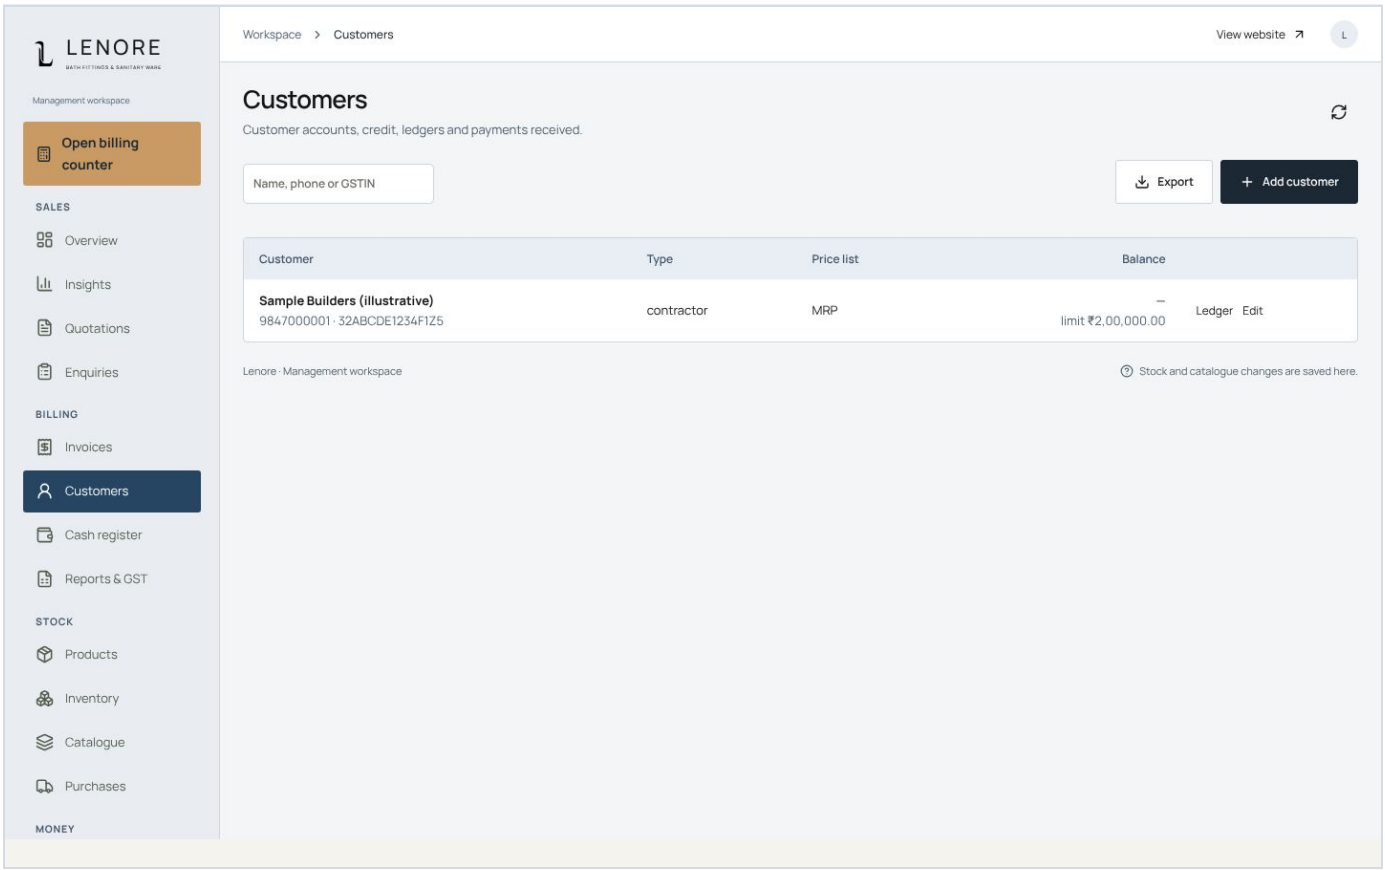

Invoices

All tax invoices with totals, balances due and stock-check flags. Open one to view or print the A4 invoice, record a payment or issue a credit note. Export to CSV.

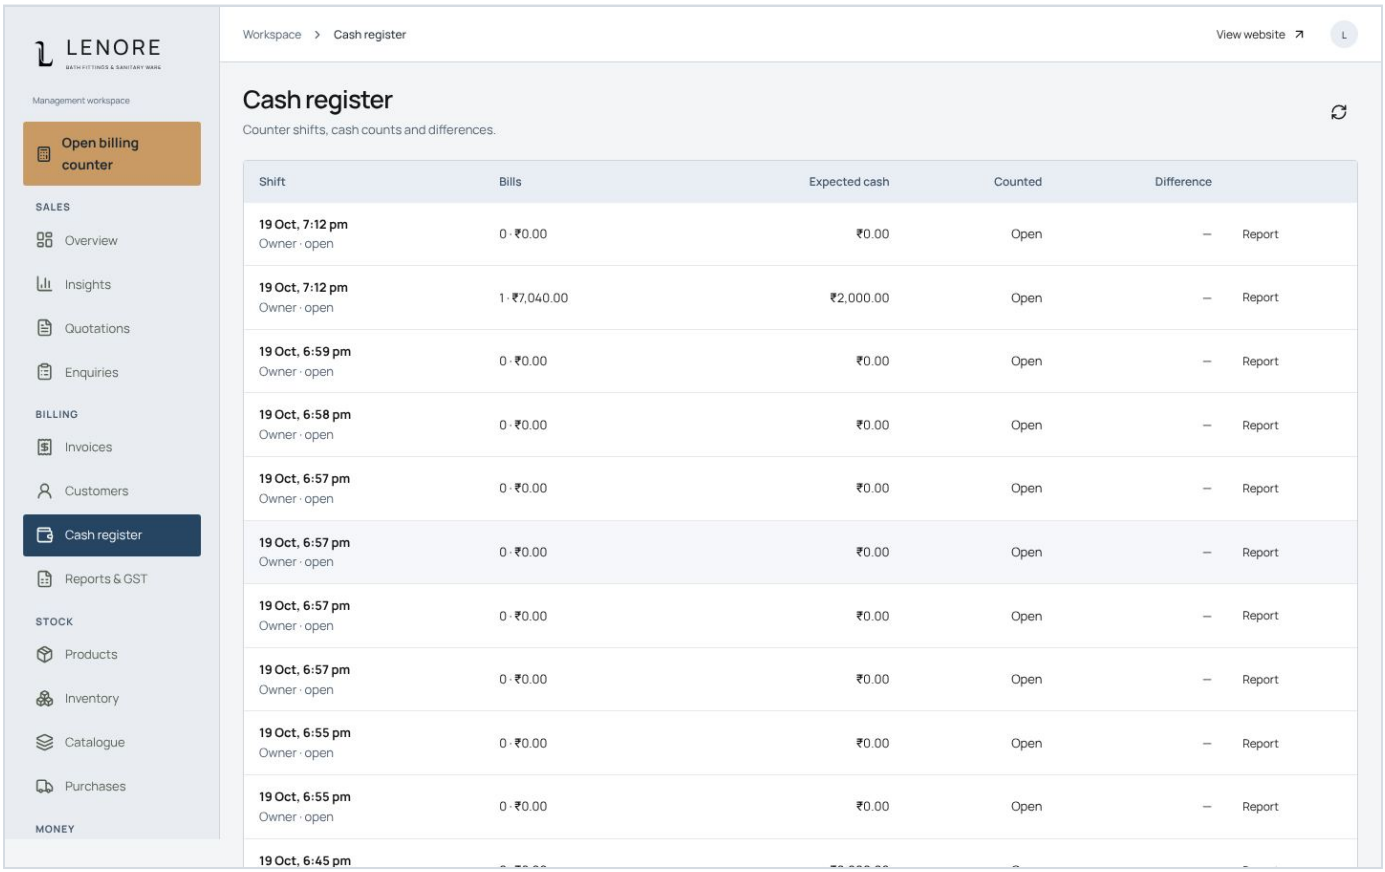

Customers

Customer accounts with type, price list, credit limit and balance. Each has a running ledger (invoices, payments, credit notes), statement export and a form to record payments received, applied to the oldest invoices first.

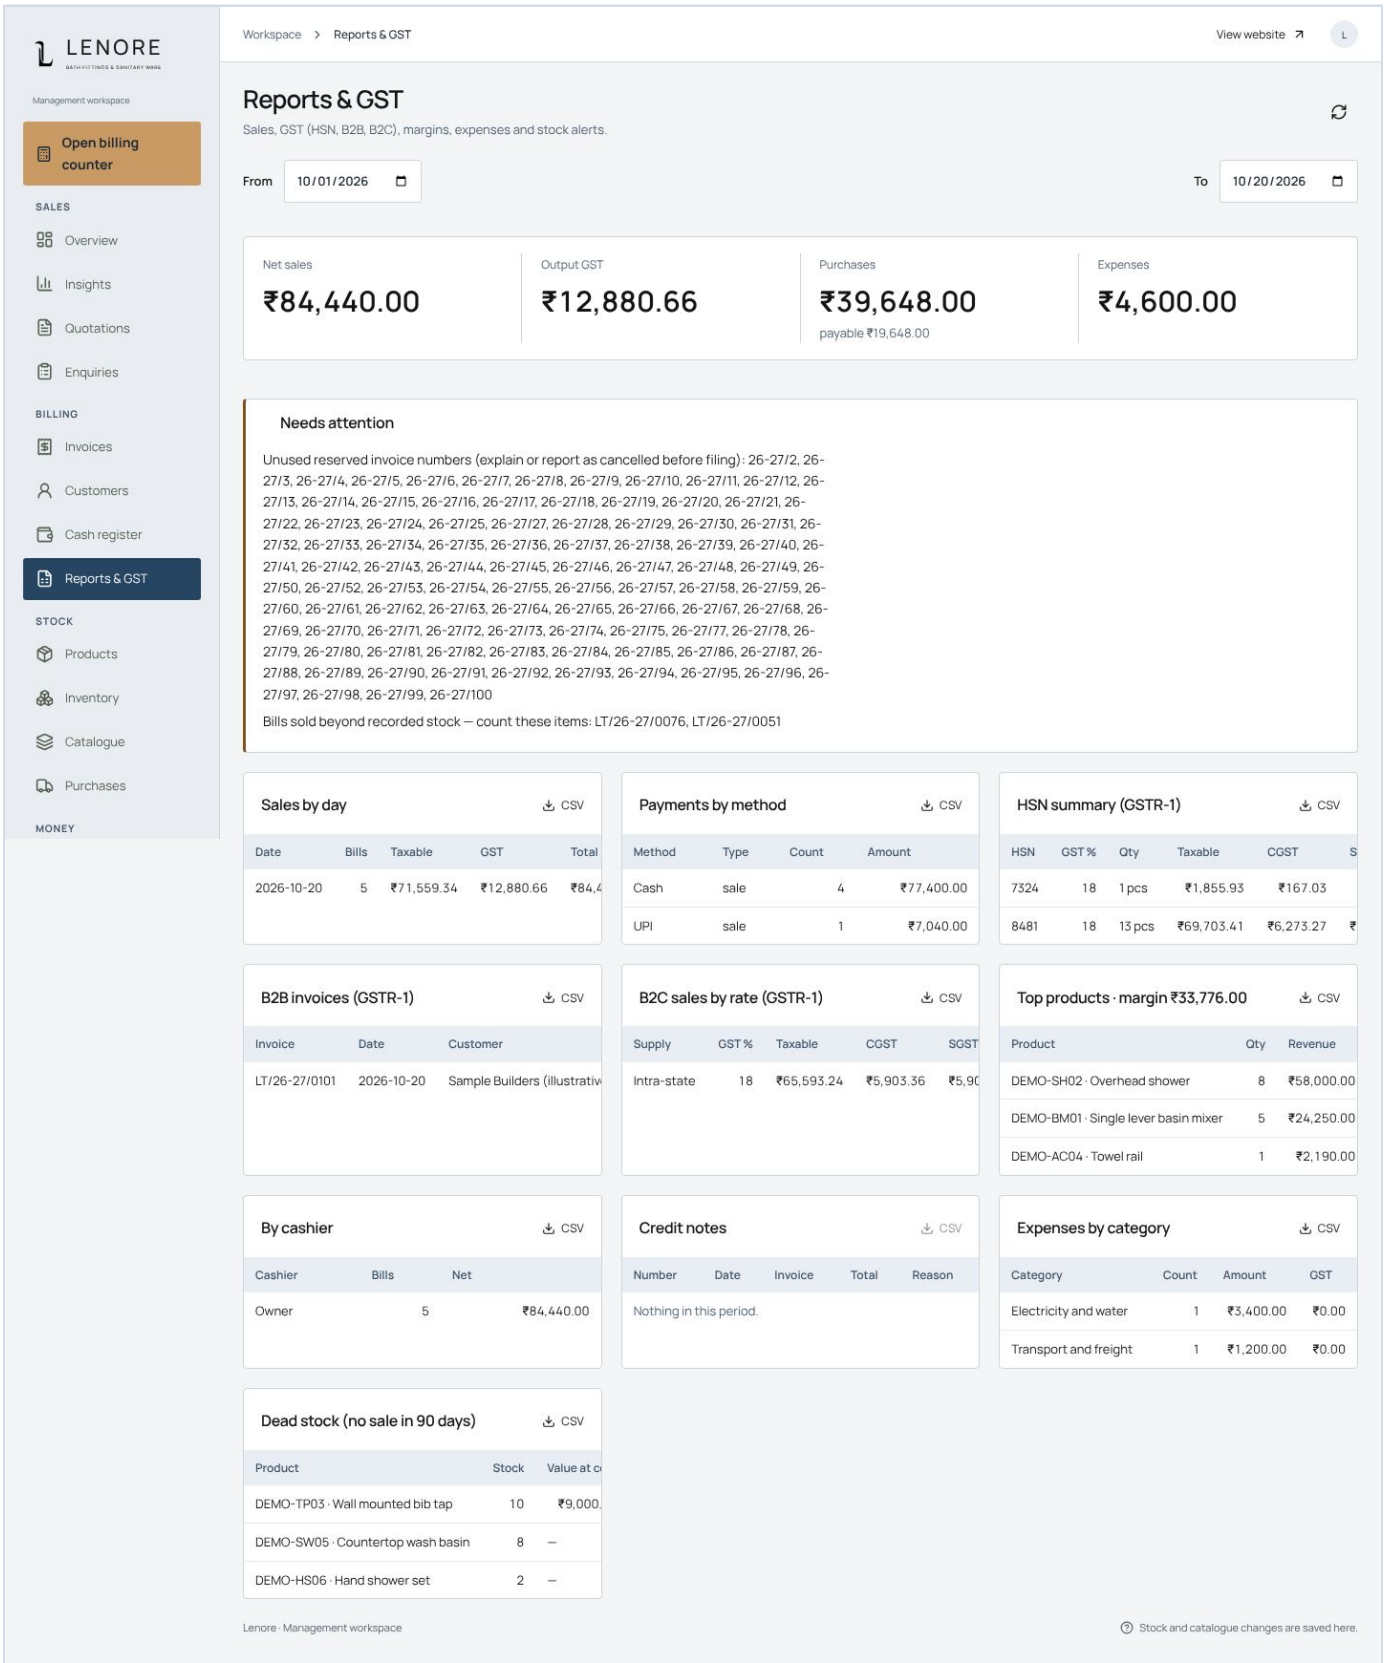

Cash register

Every counter shift with expected and counted cash and the difference, plus the shift (Z) report.

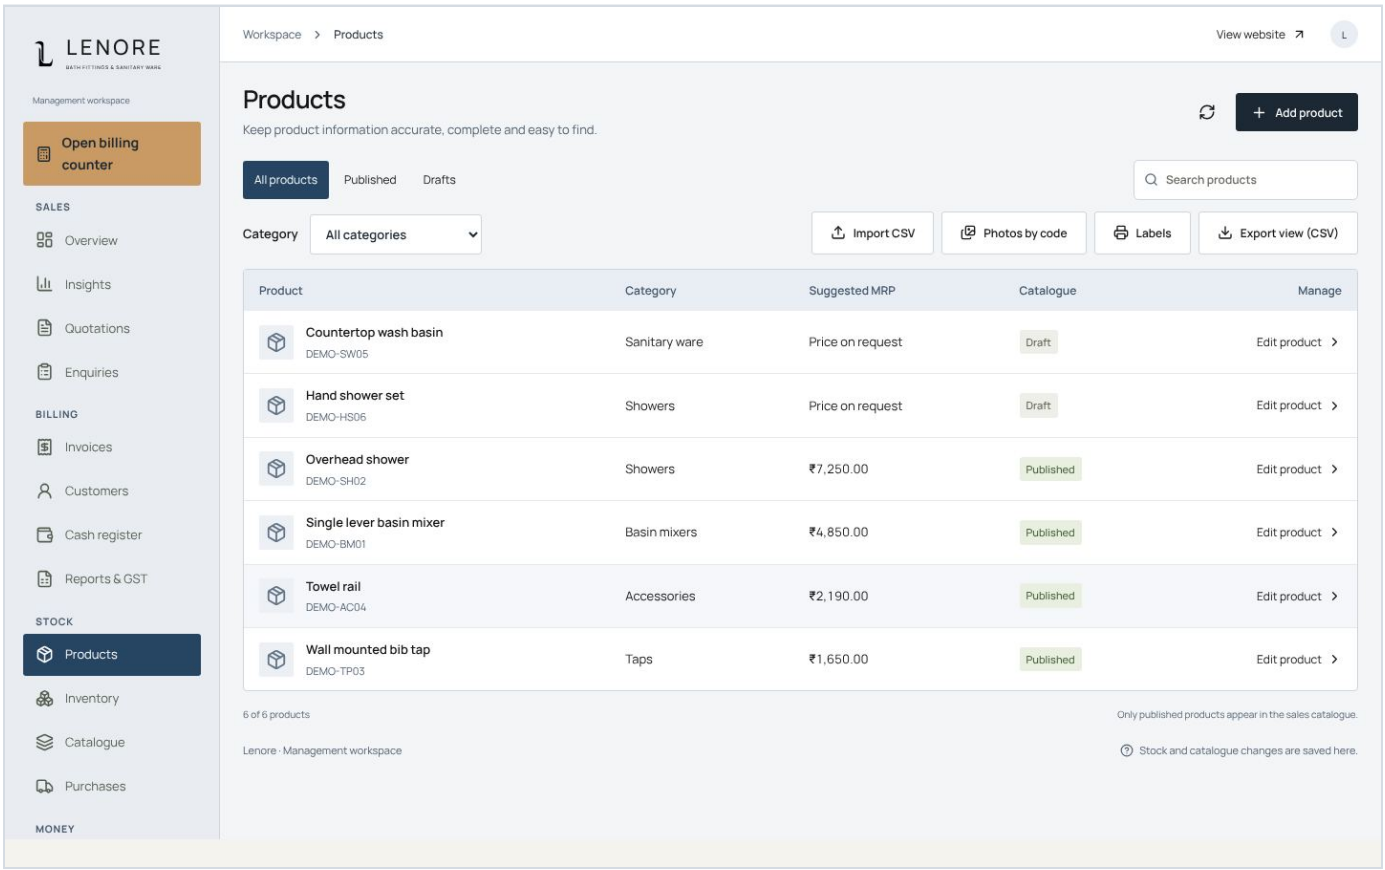

Reports & GST

Sales by day, payment methods, HSN summary, B2B invoices and B2C totals by rate (for GSTR-1), top products with margin, cashier totals, credit notes, purchases, expenses, dead stock, unused invoice numbers and stock shortfalls. Each table exports to CSV.

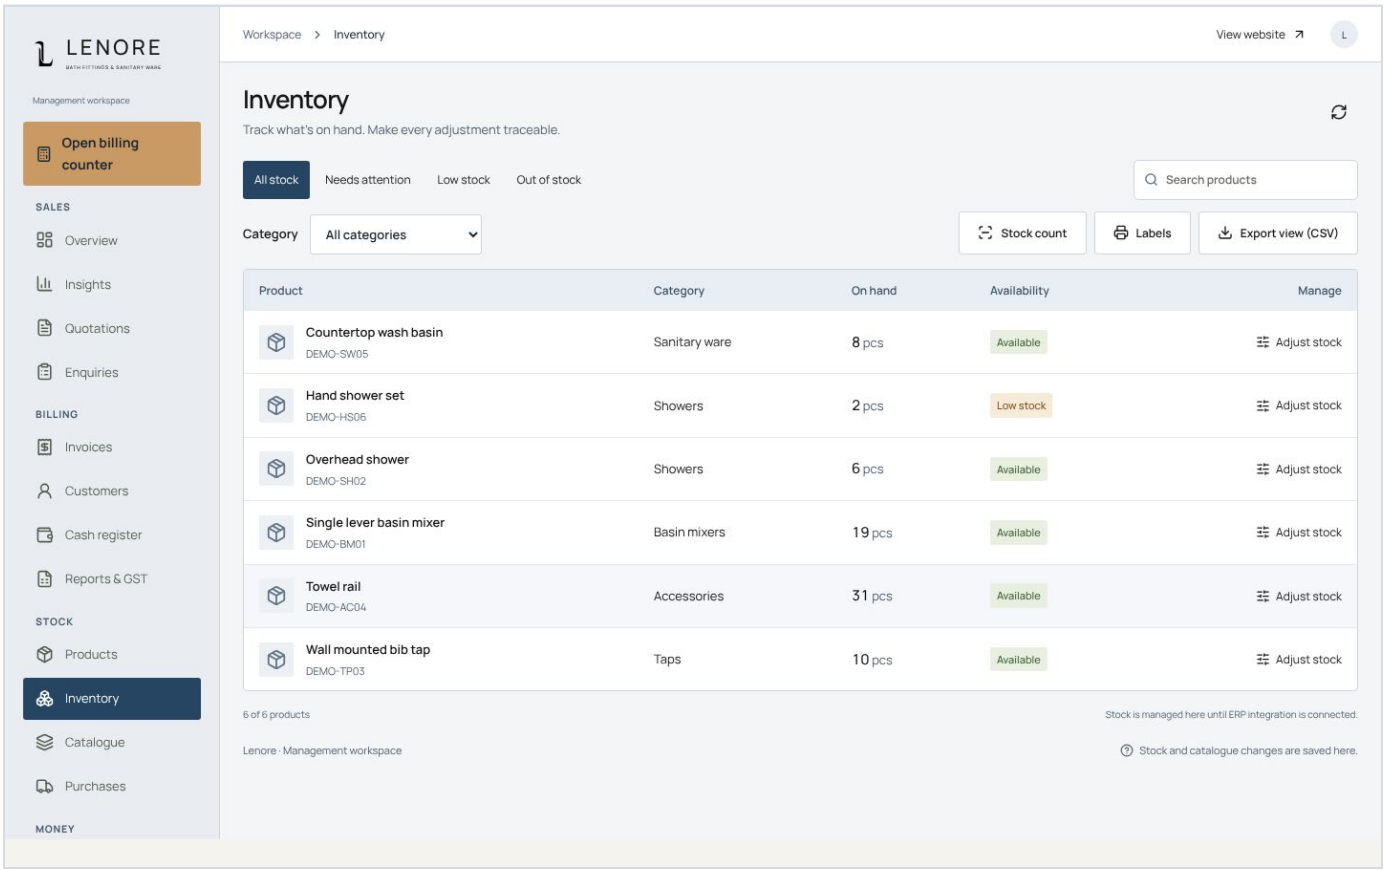

Products

Create and edit products: name, code, category, MRP, description, photos, specification sheet, barcode, shelf, HSN, GST rate, reorder level and cost. Also bulk CSV import, photo upload by product code, and barcode label printing.

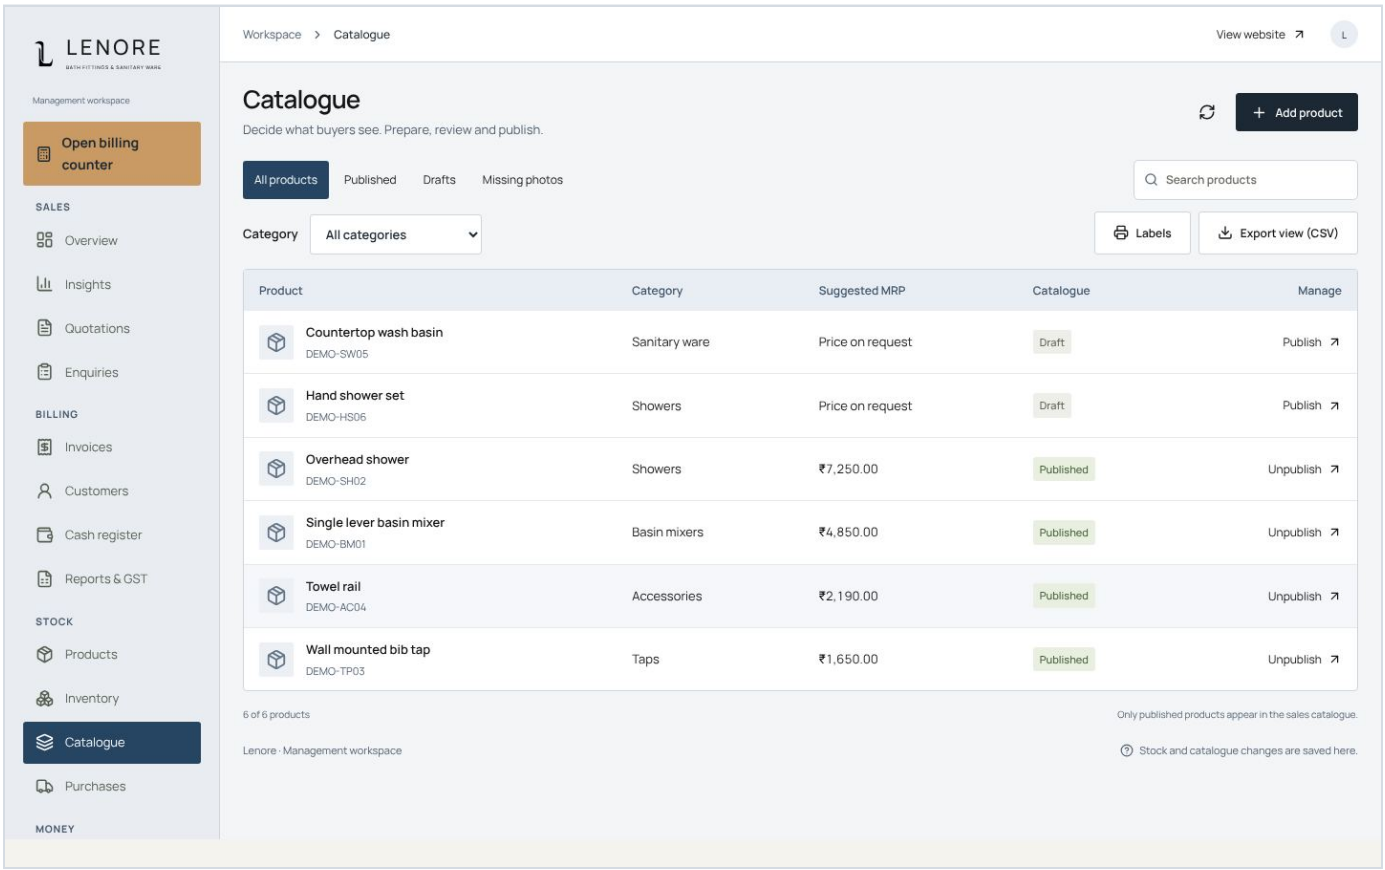

Inventory

Stock on hand with low/out filters. Every change is a typed movement (received, issued, customer return, damaged, returned to supplier, count) with reason, user and history. A stock count can be posted for many products at once.

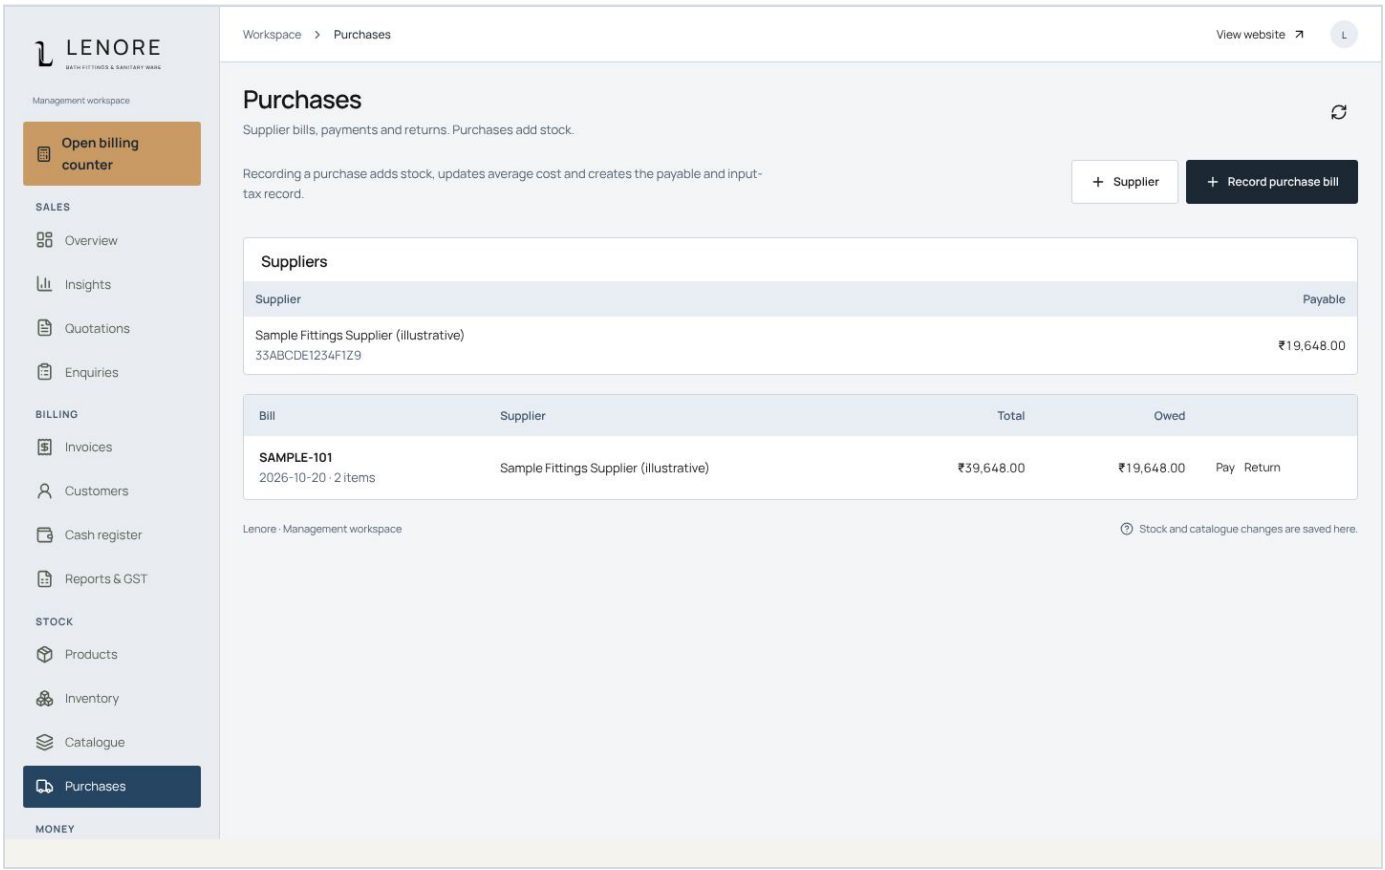

Catalogue

What is published, what is still a draft, and which products are missing photos.

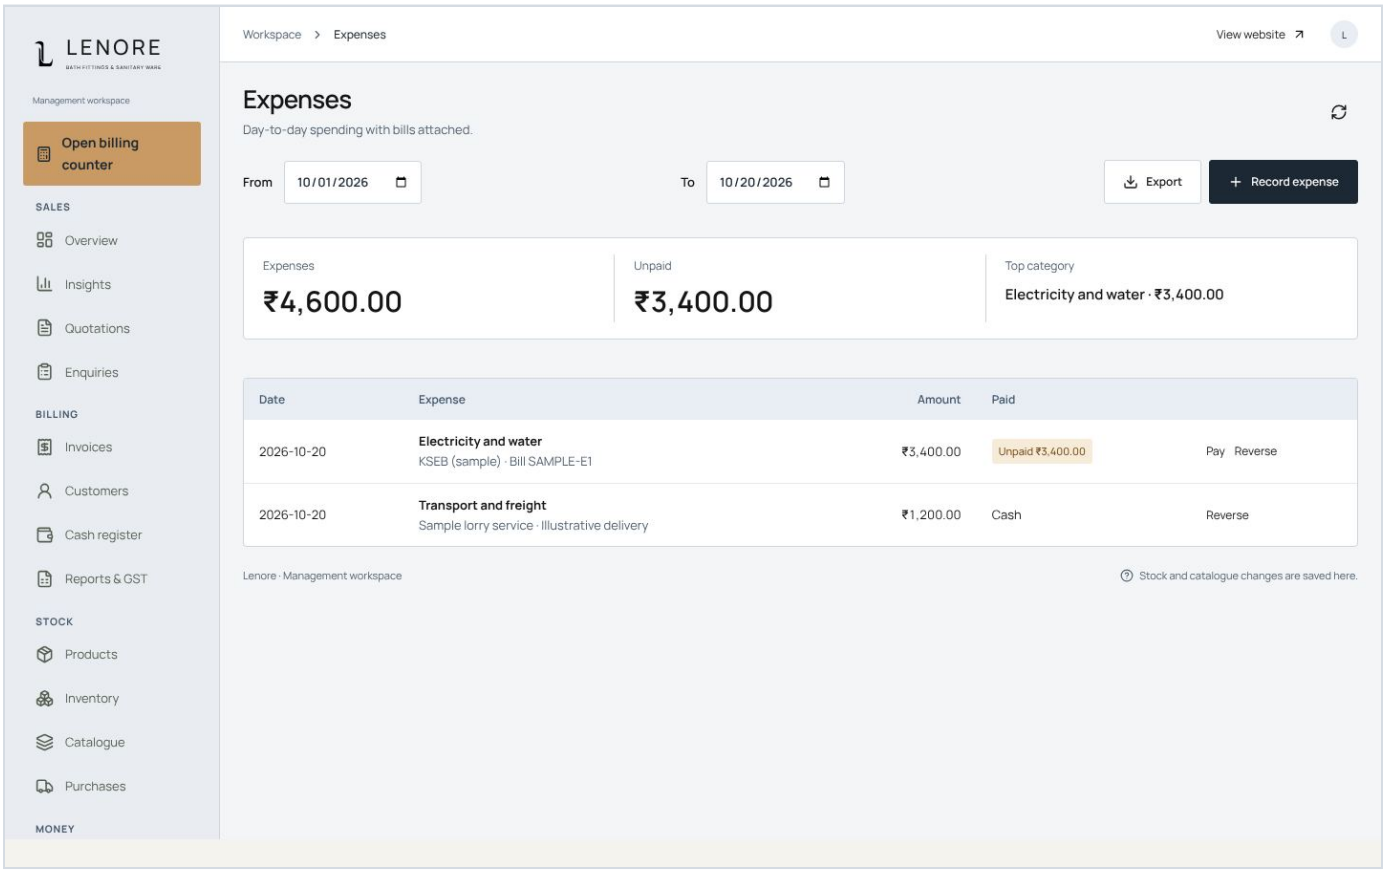

Purchases

Suppliers and their payables, purchase bills (which add stock and update average cost), supplier payments and returns to the supplier.

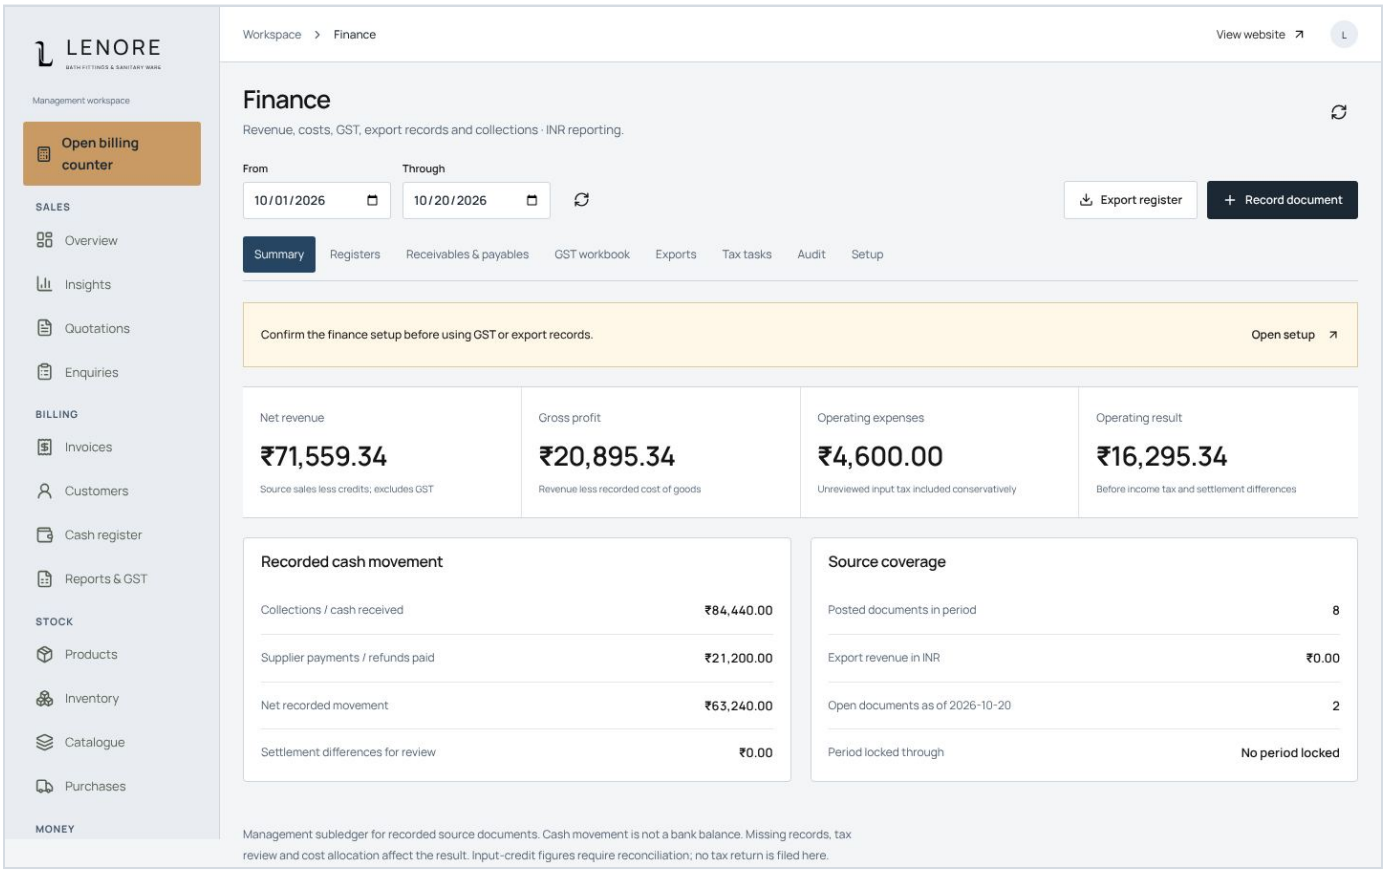

Expenses

Day-to-day spending by category, with GST, payment method, an optional bill photo, unpaid bills to settle later and reversal of mistaken entries. Totals by category and unpaid amount.

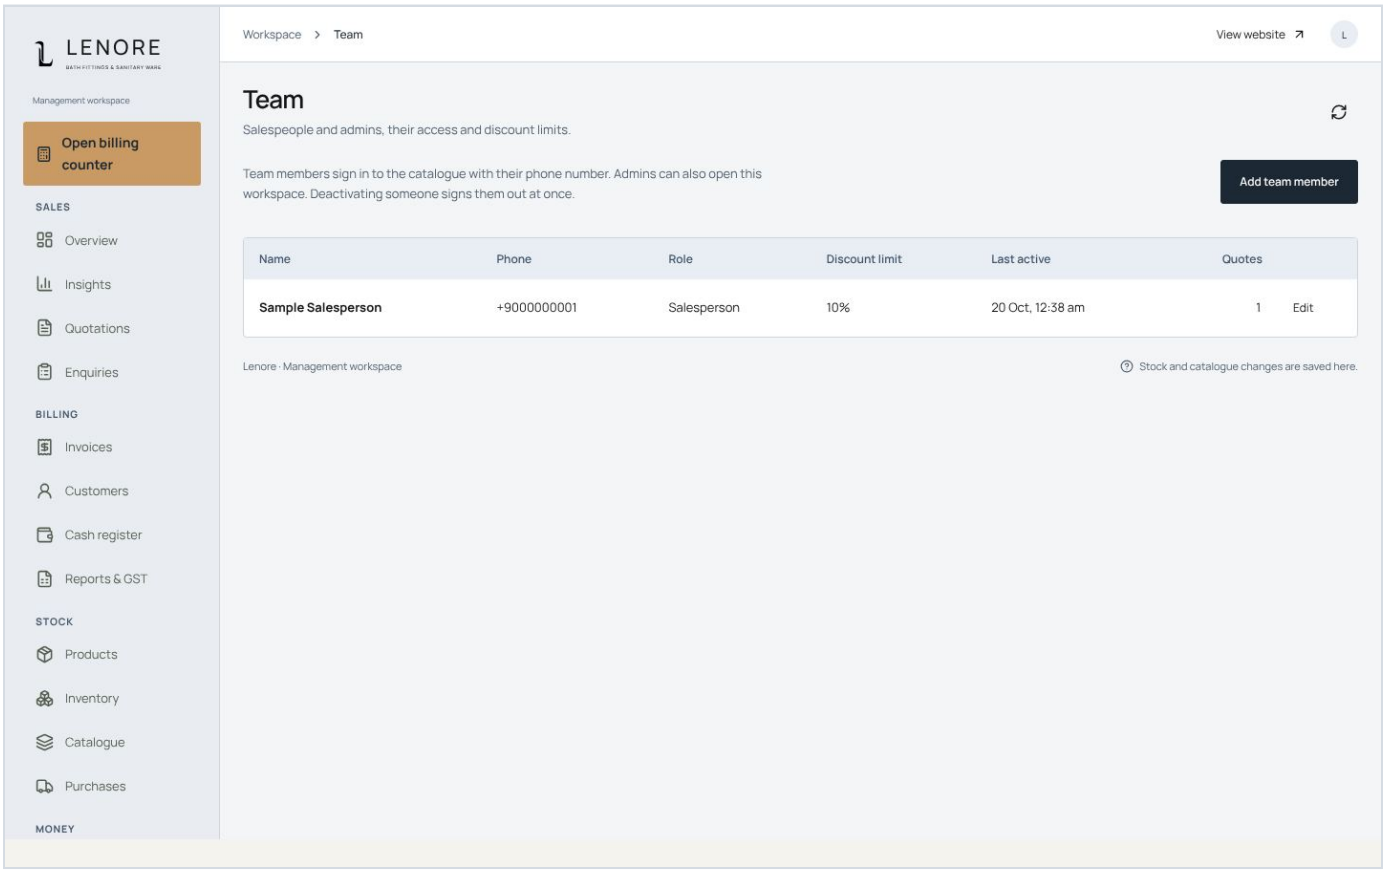

Finance

The accounting subledger: revenue, cost of goods, gross profit, collections and payments, GST workbook, export records, tax tasks and period close. Counter sales, returns, purchases and expenses post here automatically.

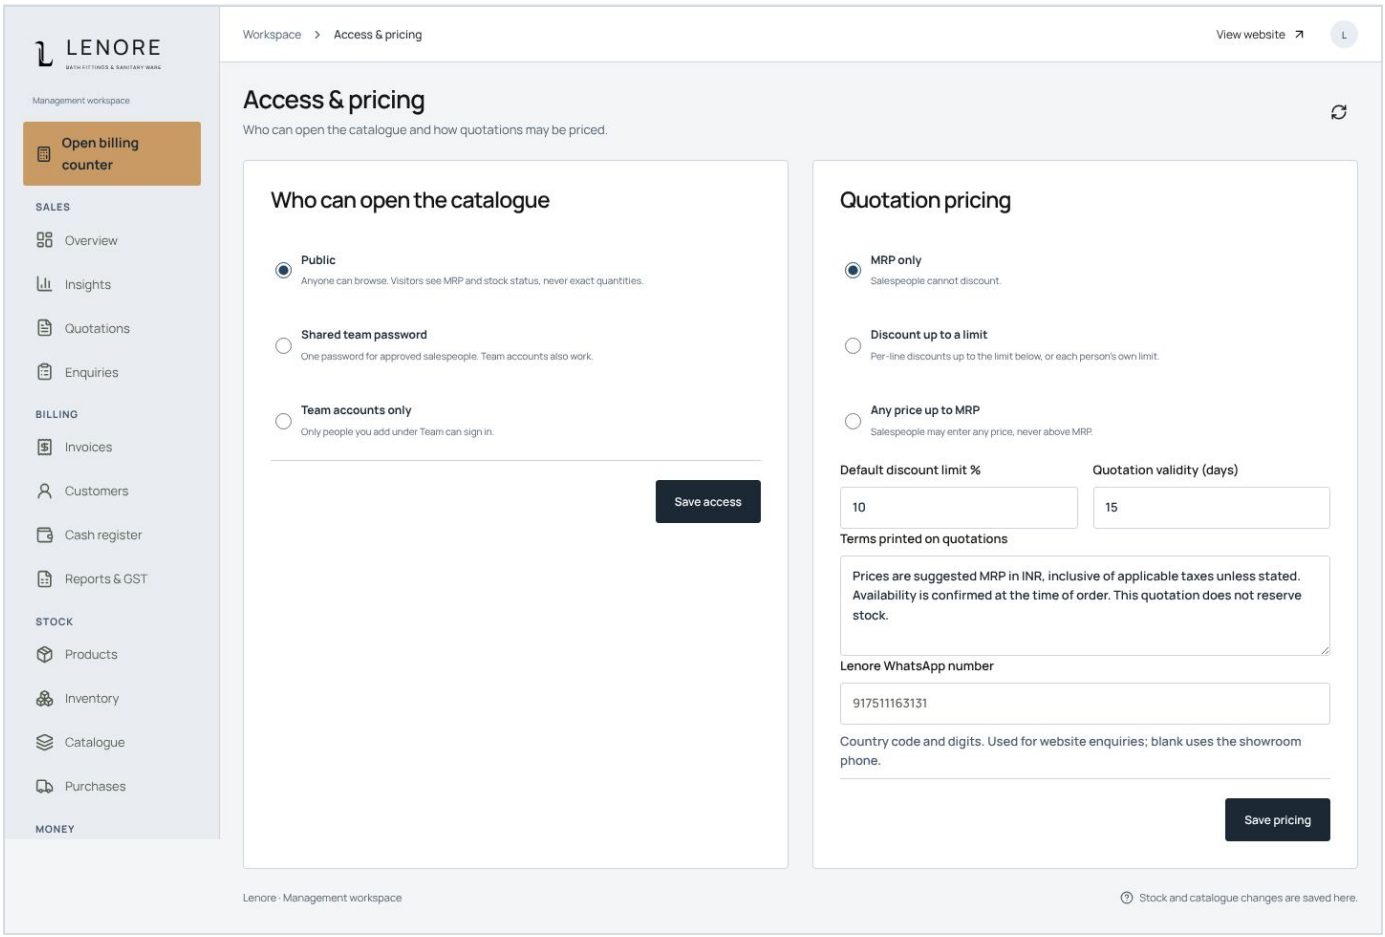

Team

Salespeople and admins: sign-in phone, role, discount limit, billing access, last activity and quote count. Deactivating someone signs them out immediately.

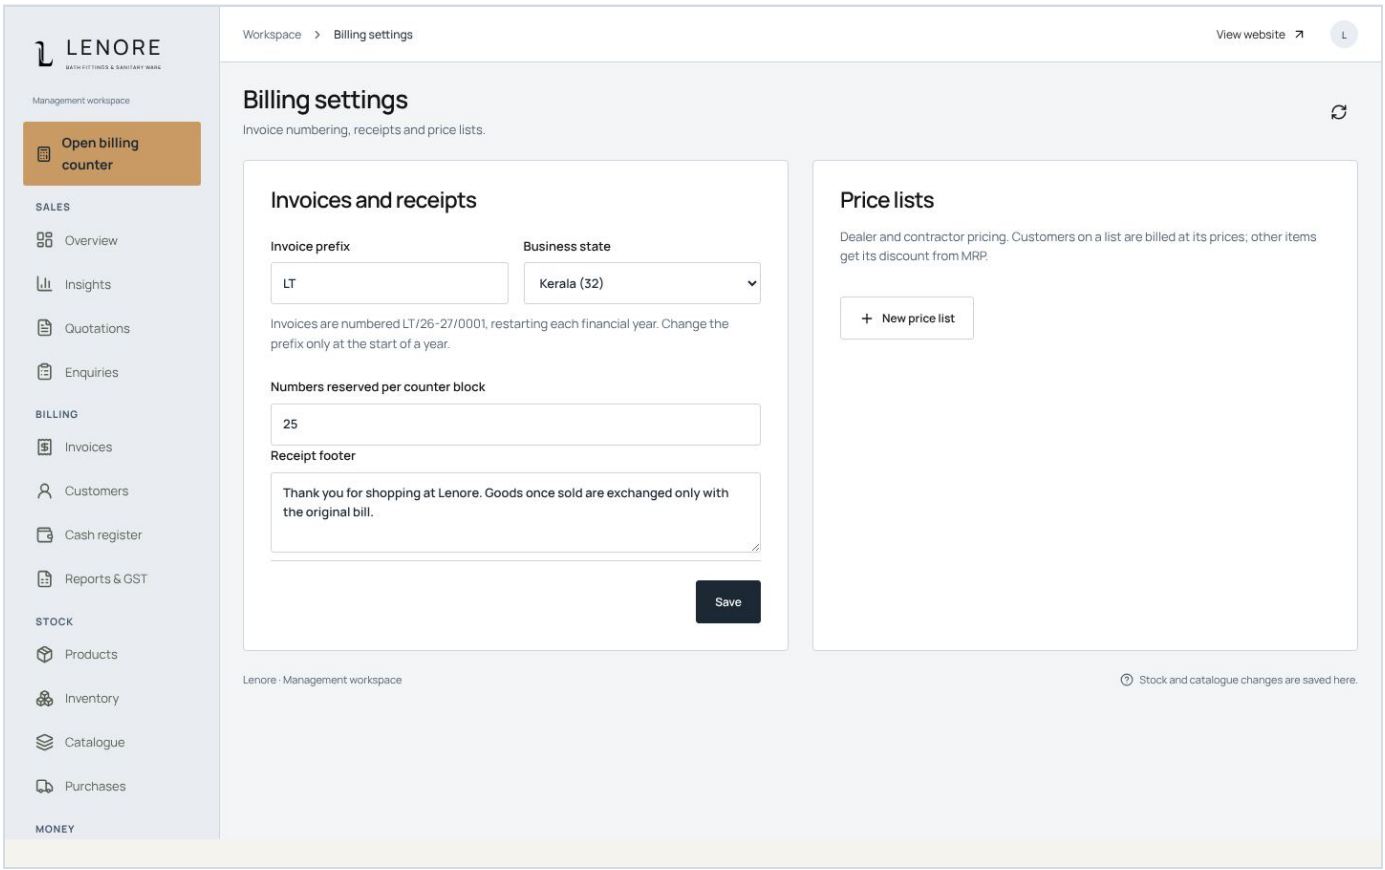

Access & pricing

Who can open the catalogue (public, shared password or team accounts only) and how quotations may be priced (MRP only, discount up to a limit, or any price up to MRP), plus quotation validity, terms and the WhatsApp number.

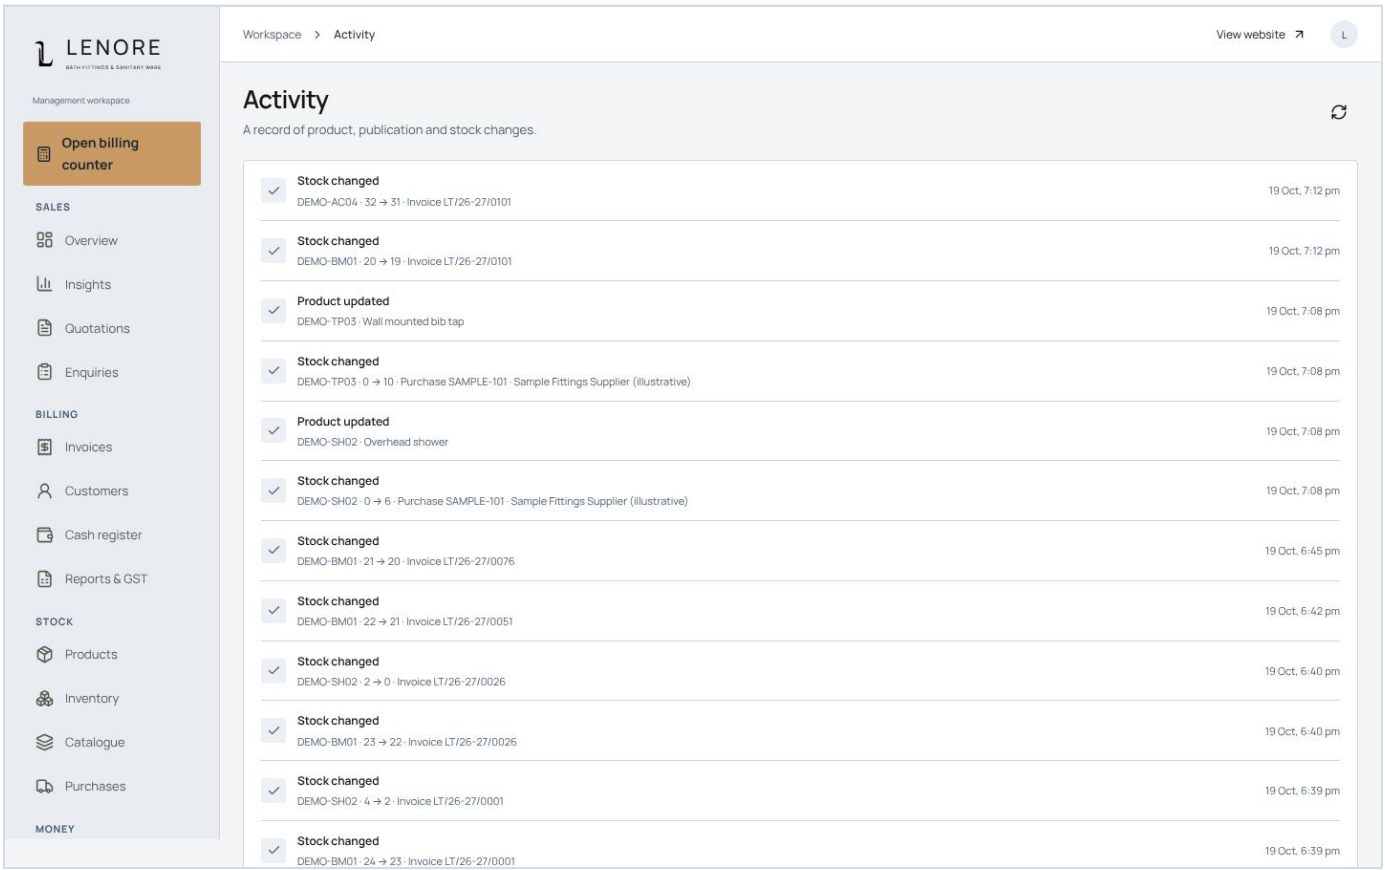

Billing settings

Invoice prefix and numbering, business state, receipt footer, number block size, and dealer/contractor price lists with special prices.

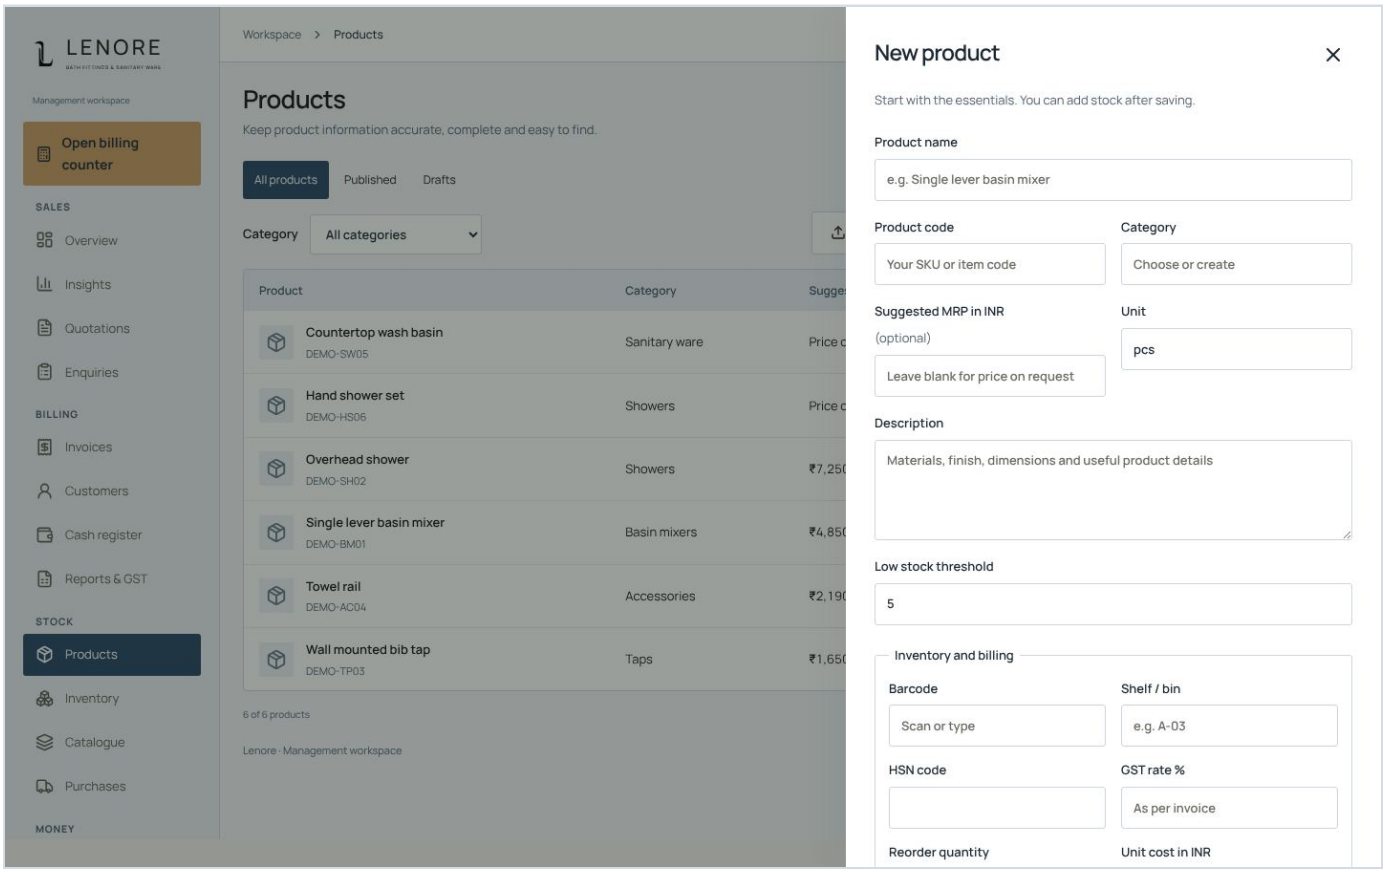

Activity

An audit trail of product, publication and stock changes.

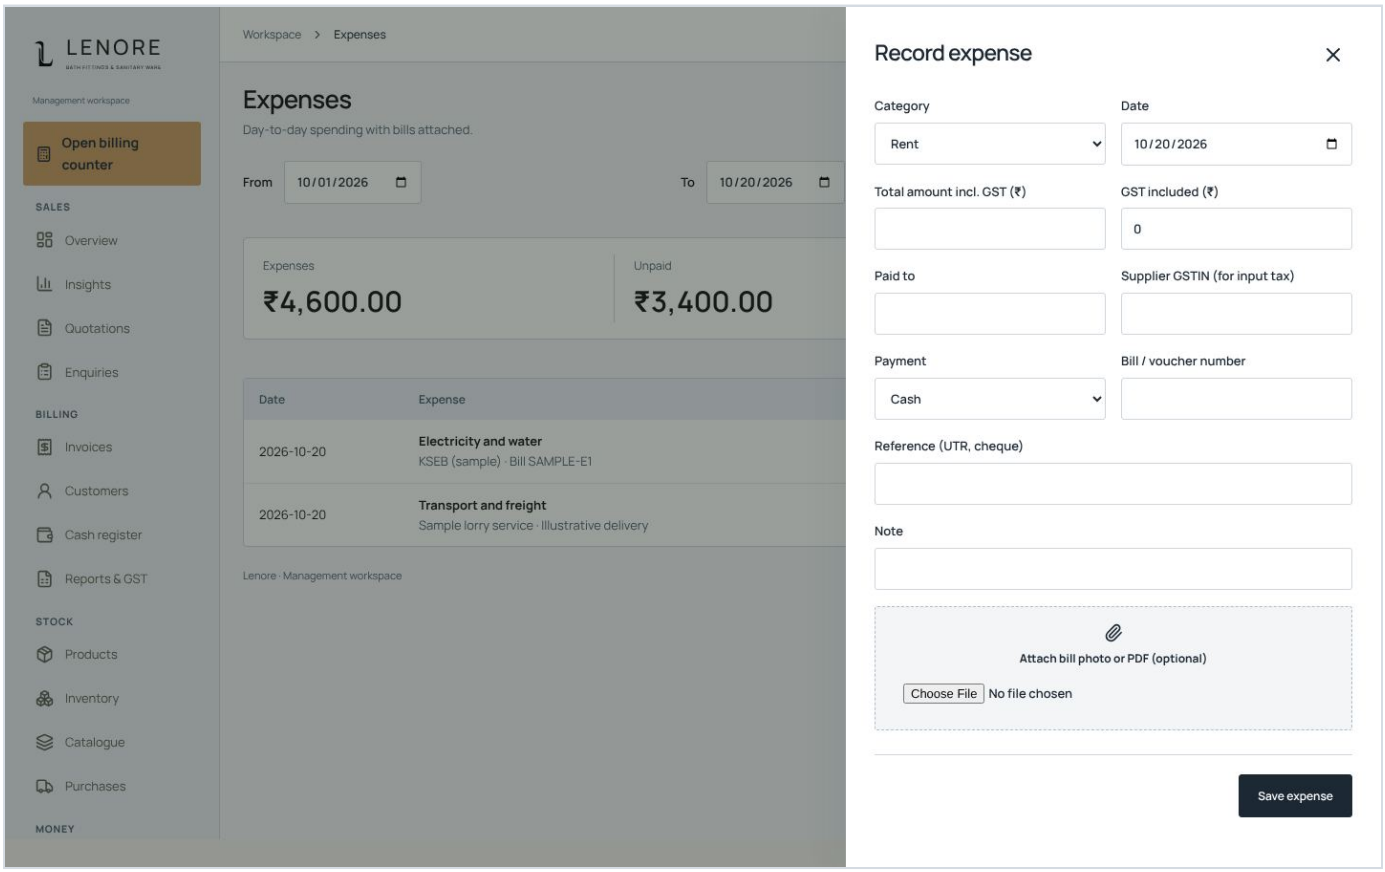

Product editor

All product, catalogue, inventory and billing fields in one panel. Products can be saved as drafts and published when ready.

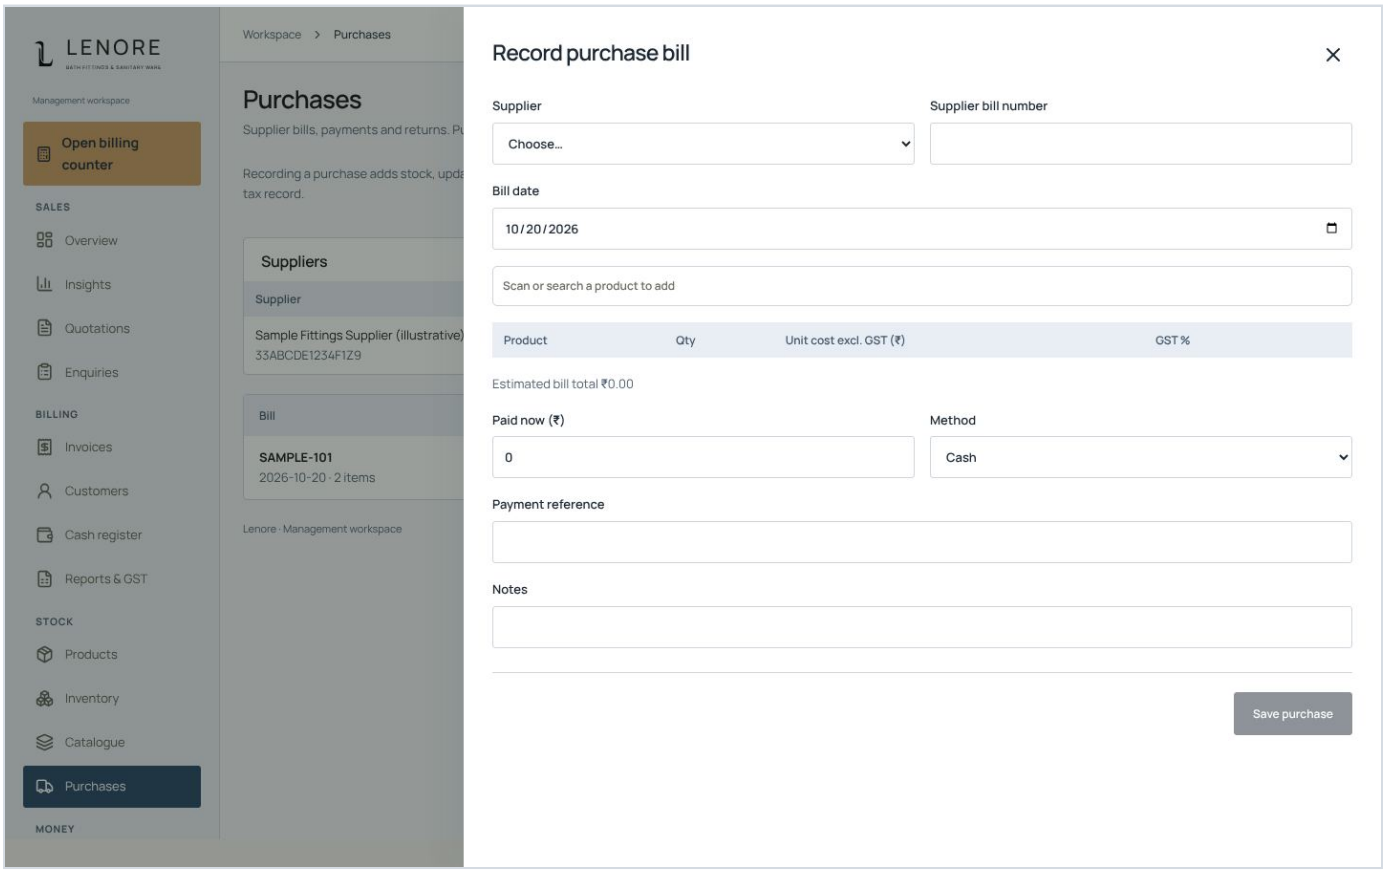

Record an expense

Category, amount, included GST and the supplier's GSTIN for input tax, payment method or 'not paid yet', and an attached bill photo taken with the phone camera.

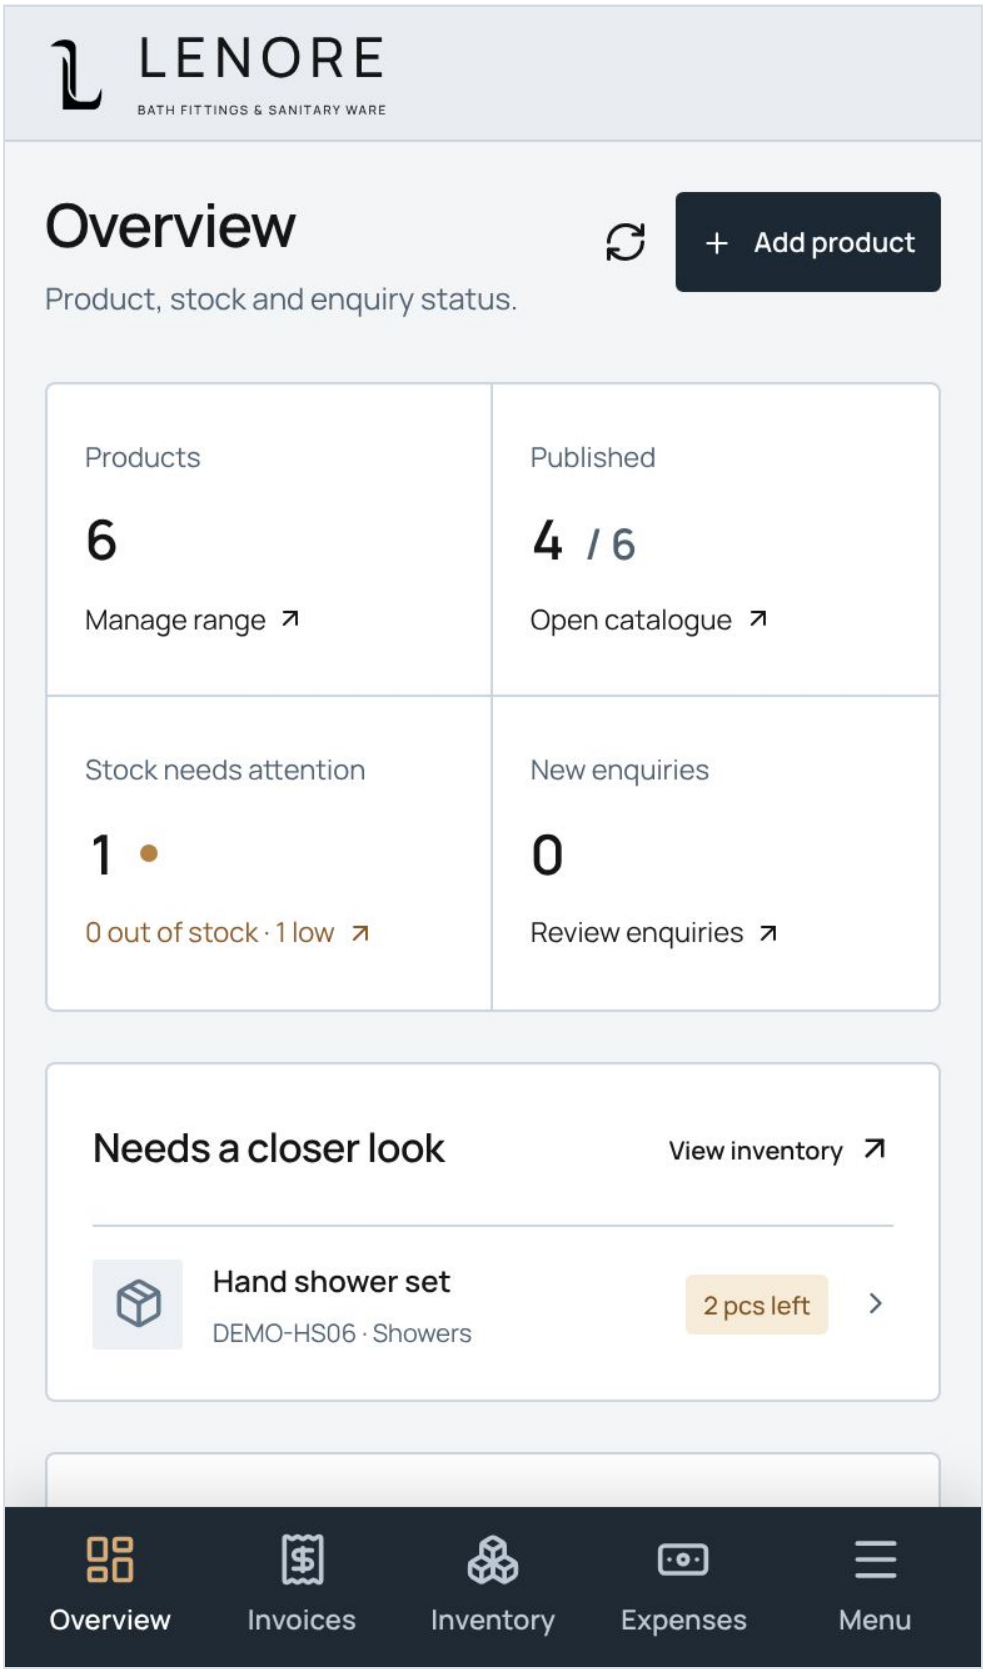

Record a purchase bill

Supplier, bill number and date, then scan or search products and enter quantity, cost and GST. Saving adds stock, updates average cost and records the payable and input tax.

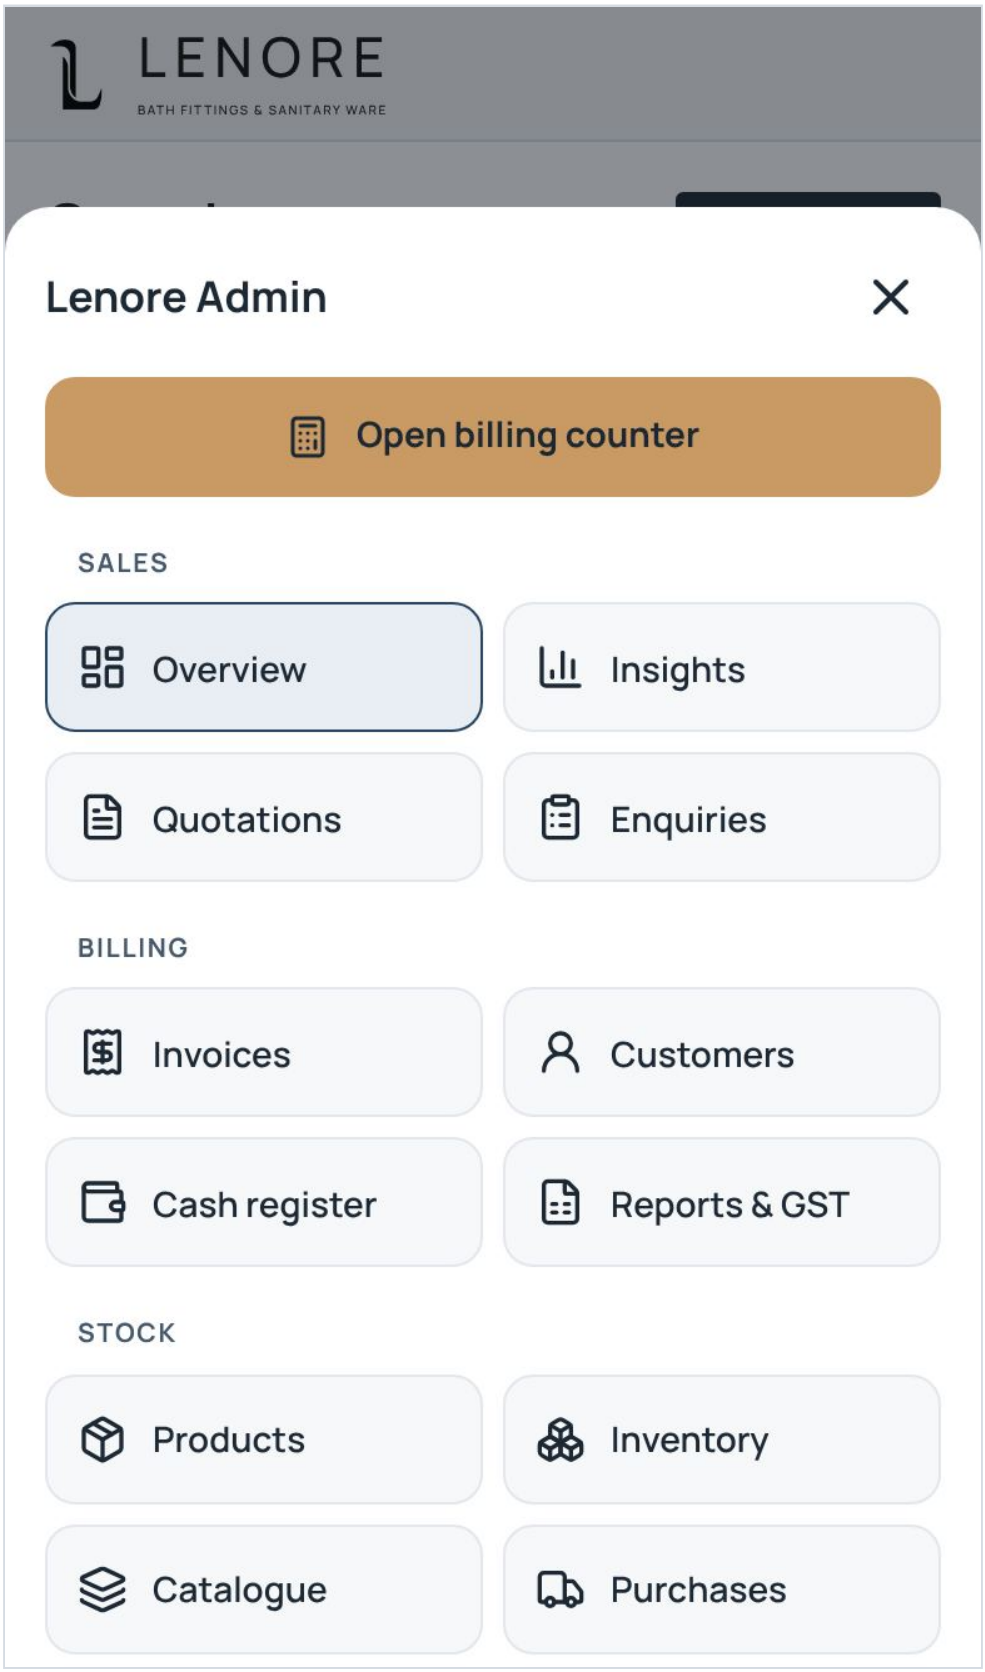

Workspace on a phone

The installable Lenore Admin app on a phone: a bottom tab bar for Overview, Invoices, Inventory and Expenses, with every other section one tap away under Menu.

Phone menu

All sections grouped as Sales, Billing, Stock, Money and Admin, plus the billing counter, catalogue, website and sign out.

Invoices on a phone

Filters stack neatly and tables scroll inside their box, so nothing spills off the screen.
